The Good Fight Jana Kramer,Michael Caussin,2020-09-22 Hosts of the award-winning Whine Down podcast, Jana Kramer and Michael Caussin explore the raw and real moments of their marriage—what it means to love, to fight, and to sincerely forgive—with spiritual guidance and practical advice for anyone seeking stronger, more fulfilling love. From the beginning, Mike and Jana had the kind of everyday arguments that drive even the happiest couples apart. Money, careers, insecurity, jealousy...And then kids, infidelity, addiction, and growing walls around their individual hearts. Many people would have separated. But Jana and Mike discovered something invaluable: While fighting under the worst possible circumstances, they learned how to fight for each other with respect, kindness, humor, and faith. The Good Fight reveals how one couple decided to honor their forever love by battling it out and staying together, told from both sides. With honesty, warmth, and hilarity, Jana and Mike walk us through the details of the most complicated fights of their past. They show readers how they've communicated, prayed, forgiven, and radically embraced each other to live their happiest, most fulfilling lives possible, and offer lessons anyone—married, dating, single—can use to give and receive lasting love.

World Health Statistics 2018 World Health Organization,2018-06-28 The World Health Statistics series is WHO's annual compilation of health statistics for its 194 member states. World health statistics 2018 focuses on the health and health-related Sustainable Development Goals (SDGs) and associated targets by bringing together data on a wide range of health-related SDG indicators. It also links to the three SDG-aligned strategic priorities of the WHO's 13th General Programme of Work, 2019-2023. World health statistics 2018 is organised into three parts. First, in order to improve understanding and interpretation of the data presented, Part 1 outlines the different types of data used and provides an overview of their compilation, processing and analysis. The resulting statistics are then publicised by WHO through its flagship products such as the World Health Statistics series. In Part 2, summaries are provided of the current status of selected health-related SDG indicators at global and regional levels, based on data available as of early 2018. In Part 3, each of these three strategic priorities of achieving universal health coverage (UHC), addressing health emergencies and promoting healthier populations are illustrated through the use of highlight stories. In Annexes A and B, country-level statistics are presented for selected health-related SDG indicators. Annex B presents statistics at WHO regional and global levels.

Cognitive Hyperconnected Digital Transformation Ovidiu Vermesan,Joël Bacquet,2022-09-01 Cognitive Hyperconnected Digital Transformation provides an overview of the current Internet of Things (IoT) landscape, ranging from research, innovation and development priorities to enabling technologies in a global context. It is intended as a standalone book in a series that covers the Internet of Things activities of the IERC-Internet of Things European Research Cluster, including both research and technological innovation, validation and deployment. The book builds on the ideas put forward by the European Research Cluster, the IoT European Platform Initiative (IoT-EPI) and the IoT European Large-Scale Pilots Programme, presenting global views and state-of-the-art results regarding the challenges facing IoT research, innovation, development and deployment in the next years. Hyperconnected environments integrating industrial/business/consumer IoT technologies and applications require new IoT open systems architectures integrated with network architecture (a knowledge-centric network for IoT), IoT system design and open, horizontal and interoperable platforms managing things that are digital, automated and connected and that function in real-time with remote access and control based on Internet-enabled tools. The IoT is bridging the physical world with the virtual world by combining augmented reality (AR), virtual reality (VR), machine learning and artificial intelligence (AI) to support the physical-digital integrations in the Internet of mobile things based on sensors/actuators, communication, analytics technologies, cyber-physical systems, software, cognitive systems and IoT platforms with multiple functionalities. These IoT systems have the potential to understand, learn, predict, adapt and operate autonomously. They can change future behaviour, while the combination of extensive parallel processing power, advanced algorithms and data sets feed the cognitive algorithms that allow the IoT systems to develop new services and propose new solutions. IoT technologies are moving into the industrial space and enhancing traditional industrial platforms with solutions that break free of device-, operating system- and protocol-dependency. Secure edge computing solutions replace local networks, web services replace software, and devices with networked programmable logic controllers (NPLCs) based on Internet protocols replace devices that use proprietary protocols. Information captured by edge devices on the factory floor is secure and accessible from any location in real time, opening the communication gateway both vertically (connecting machines across the factory and enabling the instant availability of data to stakeholders within operational silos) and horizontally (with one framework for the entire supply chain, across departments, business units, global factory locations and other markets). End-to-end security and privacy solutions in IoT space require agile, context-aware and scalable components with mechanisms that are both fluid and adaptive. The convergence of IT (information technology) and OT (operational technology) makes security and privacy by default a new important element where security is addressed at the architecture level, across applications and domains, using multi-layered distributed security measures. Blockchain is transforming industry operating models by adding trust to untrusted environments, providing distributed security mechanisms and transparent access to the information in the chain. Digital technology platforms are evolving, with IoT platforms integrating complex information systems, customer experience, analytics and intelligence to enable new capabilities and business models for digital business.

The Progressive Revolution Michael Lux,2009-01-14 This is an accessible book that delineates how progressives and the progressive movement have created the American idea and ideals and forged the kind of country in which we want to live. It creates a platform from which to argue how progressives today are fighting to improve America, in contrast to how conservatives have always worked to defend the interests of elites. Each chapter will tell the reader a story focusing on different subjects, such as efforts to enact civil rights laws, social security, the middle class, how the idea of America changed the world, and why most of us can vote. Lux points out what he feels the Democrats have done wrong during the last decades and how the lessons of history can point to making positives changes. Lux shows how the progressives have been instrumental in creating big positive change moments, and argues that as a new administration takes office in 2009 the time will be ripe for a new big change moment,. He outlines how he believes progressive policies can be channeled to solves the big problems facing us today.

Jude Hemanth,Ramesh Chandra Poonia,2022-01-28 INTERNET OF HEALTHCARE THINGS The book addresses privacy and security issues providing solutions through authentication and authorization mechanisms, blockchain, fog computing, machine learning algorithms, so that machine learning-enabled IoT devices can deliver information concealed in data for fast, computerized responses and enhanced decision-making. The main objective of this book is to motivate healthcare providers to use telemedicine facilities for monitoring patients in urban and rural areas and gather clinical data for further research. To this end, it provides an overview of the Internet of Healthcare Things (IoHT) and discusses one of the major threats posed by it, which is the data security and data privacy of health records. Another major threat is the combination of numerous devices and protocols, precision time, data overloading, etc. In the IoHT, multiple devices are connected and communicate through certain protocols. Therefore, the application of emerging technologies to mitigate these threats and provide secure data communication over the network is discussed. This book also discusses the integration of machine learning with the IoHT for analyzing huge amounts of data for predicting diseases more accurately. Case studies are also given to verify the concepts presented in the book. Audience Researchers and industry engineers in computer science, artificial intelligence, healthcare sector, IT professionals, network administrators, cybersecurity experts.
