Storage and Network Convergence Using FCoE and iSCSI Sangam Racherla,Silvio Erdenberger,Harish Rajagopal,Kai Ruth,IBM Redbooks,2014-07-18 Along with servers and networking infrastructure, networked storage is one of the fundamental components of a modern data center. Because storage networking has evolved over the past two decades, the industry has settled on the basic storage networking technologies. These technologies are Fibre Channel (FC) storage area networks (SANs), Internet Small Computer System Interface (iSCSI)-based Ethernet attachment, and Ethernet-based network-attached storage (NAS). Today, lossless, low-latency, high-speed FC SANs are viewed as the high-performance option for networked storage. iSCSI and NAS are viewed as lower cost, lower performance technologies. The advent of the 100 Gbps Ethernet and Data Center Bridging (DCB) standards for lossless Ethernet give Ethernet technology many of the desirable characteristics that make FC the preferred storage networking technology. These characteristics include comparable speed, low latency, and lossless behavior. Coupled with an ongoing industry drive toward better asset utilization and lower total cost of ownership, these advances open the door for organizations to consider consolidating and converging their networked storage infrastructures with their Ethernet data networks. Fibre Channel over Ethernet (FCoE) is one approach to this convergence, but 10-Gbps-enabled iSCSI also offers compelling options for many organizations with the hope that their performance can now rival that of FC. This IBM® Redbooks® publication is written for experienced systems, storage, and network administrators who want to integrate the IBM System Networking and Storage technology successfully into new and existing networks. This book provides an overview of today's options for storage networking convergence. It reviews the technology background for each of these options and then examines detailed scenarios for them by using IBM and IBM Business Partner convergence products.

Wireless Communication in Underground Mines L. K. Bandyopadhyay,S. K. Chaulya,P. K. Mishra,2009-08-29 Wireless communication has emerged as an independent discipline in the past decades. Everything from cellular voice telephony to wireless data transmission using wireless sensor networks has profoundly impacted the safety, production, and productivity of industries and our lifestyle as well. After a decade of exponential growth, the wireless industry is one of the largest industries in the world. Therefore, it would be an injustice if the wireless communication is not explored for mining industry. Underground mines, which are characterized by their tough working conditions and hazardous environments, require fool-proof mine-wide communication systems for smooth functioning of mine workings and ensuring better safety. Proper and re- able communication systems not only save the machine breakdown time but also help in immediate passing of messages from the vicinity of underground working area to the surface for day-to-day normal mining operations as well as for speedy rescue operations in case of disaster. Therefore, a reliable and effective commu- cation system is an essential requisite for safe working, and maintaining requisite production and productivity of underground mines. Most of the existing systems generally available in underground mines are based on line (wired) communication principle, hence these are unable to withstand in the disaster conditions and dif?cult to deploy in inaccessible places. Therefore, wireless communication is an indispe- able, reliable, and convenient system and essential in case of day-to-day normal duty or disaster situations.

Logical Modeling of Cellular Processes: From Software Development to Network Dynamics Matteo Barberis,Tomáš Helikar,2019-08-16 Mathematical models have become invaluable tools for understanding the intricate dynamic behavior of complex biochemical and biological systems. Among computational strategies, logical modeling has been recently gaining interest as an alternative approach to address network dynamics. Due to its advantages, including scalability and independence of kinetic parameters, the logical modeling framework is becoming increasingly popular to study the dynamics of highly interconnected systems, such as cell cycle progression, T cell differentiation and gene regulation. Novel tools and standards have been developed to increase the interoperability of logical models, which can now be employ to respond a variety of biological questions. This Research Topic brings together the most recent and cutting-edge approaches in the area of logical modeling including, among others, novel biological applications, software development and model analysis techniques.

Conquering Complexity Mike Hinchey,Lorcan Coyle,2012-01-03 Software has long been perceived as complex, at least within Software Engineering circles. We have been living in a recognised state of crisis since the first NATO Software Engineering conference in 1968. Time and again we have been proven unable to engineer reliable software as easily/cheaply as we imagined. Cost overruns and expensive failures are the norm. The problem is fundamentally one of complexity: software is fundamentally complex because it must be precise. Problems that appear to be specified quite easily in plain language become far more complex when written in a more formal notation, such as computer code. Comparisons with other engineering disciplines are deceptive. One cannot easily increase the factor of safety of software in the same way that one could in building a steel structure, for example. Software is typically built assuming perfection, often without adequate safety nets in case the unthinkable happens. In such circumstances it should not be surprising to find out that (seemingly) minor errors have the potential to cause entire software systems to collapse. The goal of this book is to uncover techniques that will aid in overcoming complexity and enable us to produce reliable, dependable computer systems that will operate as intended, and yet are produced on-time, in budget, and are evolvable, both over time and at run time. We hope that the contributions in this book will aid in understanding the nature of software complexity and provide guidance for the control or avoidance of complexity in the engineering of complex software systems.

DS8000 I/O Priority Manager Gero Schmidt,Bertrand Dufrasne,Jana Jamsek,Peter Kimmel,Hiroaki Matsuno,Flavio Morais,Lindsay Oxenham,Antonio Rainero,Denis Senin,IBM Redbooks,2012-03-21 This IBM® Redpaper™ publication describes the concepts and functions of the IBM System Storage® DS8000® I/O Priority Manager. The DS8000 I/O Priority Manager enables more effective storage consolidation and performance management combined with the ability to align quality of service (QoS) levels to separate workloads in the system. With DS8000 I/O Priority Manager, the system can prioritize access to system resources to achieve the volume's desired QoS based on defined performance goals (high, medium, or low) of any volume. I/O Priority Manager constantly monitors and balances system resources to help applications meet their performance targets automatically, without operator intervention. Starting with DS8000 Licensed Machine Code (LMC) level R6.2, the DS8000 I/O Priority Manager feature supports open systems and IBM System z®. DS8000 I/O Priority Manager, together with IBM z/OS® Workload Manager (WLM), provides more effective storage consolidation and performance management for System z systems. Now tightly integrated with Workload Manager for z/OS, DS8000 I/O Priority Manager improves disk I/O performance for important workloads. It also drives I/O prioritization to the disk system by allowing WLM to give priority to the system's resources automatically when higher priority workloads are not meeting their performance goals. Integration with zWLM is exclusive to DS8000 and System z systems. The paper is aimed at those who want to get an understanding of the DS8000 I/O Priority Manager concept and its underlying design. It provides guidance and practical illustrations for users who want to exploit the capabilities of the DS8000 I/O Priority Manager.

The Judgment Against Imperialism, Fascism and Racism Against Caliphate and Islam Khondakar Golam Mowla,2008-10 Where are Judges or Judgments with human conscious and high moral when about half of Iraqi population vanished since recent war against Iraq including millions children of Iraq for illegal sanction? Which means there is no justice for those who do not have WMD to attack or to defend own land or dollars or pounds to bribe or to buy few real Judges or Judgment with human conscious or moral. And without money you cannot buy a Judgment. Illegal Governors of present illegal Muslim or Arab client States are also responsible to host most powerful countries on earth with their army, air force and navy with deadly WMD in Muslim land, sea and air to invade Muslim land like Iraq and Afghanistan or to threaten Iran. There were no independent states like Iraq before First World War since those present illegal client States became part of Caliphate/Khilafah 1400 years ago. World Muslims never accepted those illegal Muslim or Arab client States which were created after First European War known as First World War. A policy of attacking the idea of the Caliphate by linking it with the political violence of the jihadi movement cannot eliminate its Koranic authority. The Islamic world may not totally agree with the armed method of the jihadi movement, but the Caliphate's linkage with the Koran is not in dispute. The political and non-violent aspect of the Islamic movement, considered the godfather of reviving the Caliphate idea, has deeper and wider appeal. An attack on the Caliphate is in effect considered an attack against Islam.[i] Readers also must judge on following fact prior to World War as Desert storm in 1991 and subsequent sanction against Iraq which killed millions children was wrong and it was internal matter of destroyed Caliphate. What about genocide in Iraq since 2003 for which half of Iraqi population are gone? What about millions killed in Indonesia after Sukarno was ousted? What about coup in Iran in 1953 which ousted democratic elected Prime Minister of Iran? What about genocide in Bangladesh in 1971 by same Pakistanis Army who is now doing same genocide in Northern Pakistan at this moment? And yet in another recent book 'THE SECRET HISTORY OF SADDAM'S WAR UNHOLY BABYLON BY ADEL DARWISH AND GREGORY ALEXANDER' published by Victor Gollancz Ltd, London, it is mentioned in pg. 3-4 that 'Britain had recognized Kuwait's independence on 19th June 1961, abrogating an agreement signed in 1899 which had made the emirate a British protectorate-..... the 1899 Anglo-Kuwait agreement signed by the former Sheikh of Kuwait for 15,000 Indian rupees from the British commissioner in Abadan., in pg. 6 it is mentioned 'Britain proceeded to establish posts and naval bases along the trade route to India via the Suez Canal, which was opened in 1866, and also signed exclusive agreements with Arab rulers throughout the Gulf. The first was with Bahrain in 1880, prohibiting the sheikhdom from making any treaties or agreements with any state other than Britain or establishing diplomatic relations with

other countries without British consent. there have been 7,000 madrassas built ... and that's where bin Laden lives and we will go at him if we have actually (sic) intelligence.Seven thousand? Where on earth does this figure come from?It's an odd situation. Obama and Biden want to close down Iraq and re-conquer Afghanistan. The Palin College of Clich s characterised this as a white flag of surrender in Iraq while continuing to warn of the dangers of Iran, the name of whose loony president Ahmadinejad defeated McCain three times in last week's pseudo-debate.But it's the same old story. All we have learned in America these past two weeks, to quote Joan Littlewood's Oh! What a Lovely War, is that the war goes on.
