Election 2007 R.J. May,Ray Anere,Nicole Haley,Katherine Wheen,2013-09-23 Papua New Guinea's general election in 2007 attracted particular interest for several reasons. Not only did it follow what was widely acknowledged as the country's worst election ever, in 2002 (in which elections in six of the country's 109 electorates were declared to be 'failed elections'), it was the first general election to be held under a new limited preferential voting system. It also followed the first full parliamentary term under the Organic Law on the Integrity of Political Parties and Candidates, which had been introduced in 2001 in an attempt to strengthen political parties and create a greater degree of stability in the national parliament, and was the first to embrace a 'whole-of-government' approach to electoral administration, through an Interdepartmental Electoral Committee. This volume provides an analysis of the 2007 election, drawing on the work of a domestic monitoring team organized through the National Research Institute, and several visiting scholars. It addresses key issues such as voter education, electoral administration, election security, the role of political parties, women as candidates and voters,

the shift to limited preferential voting, and HIV transmission, and provides detailed accounts of the election in a number of open and provincial electorates. It is generally agreed that the election of 2007 was an improvement on that of 2002. But problems of electoral administration and voting behaviour remain. These are identified in this volume, and recommendations made for electoral reform.

The Neuroscience of Risky Decision Making Valerie F. Reyna,Vivian Zayas,2014-01-01 Whether the decision is to have unprotected sex, consent to surgery, have an extra piece of pie, or spend rather than save for retirement, risky decisions permeate our lives, and sometimes with disastrous consequences. How and why risk taking occurs has important implications. Yet many questions remain about how neurobiological, psychological, and socio-cultural factors influence decision-making. This book advances basic understanding and scientific theory about the brain mechanisms underlying risky decision by integrating findings from a number of disciplines, including development and cognitive psychology, brain sciences, law, behavioral economic, and addiction. The result is a rich scientific framework for understanding the causal mechanisms of risky decision making across the lifespan. Book jacket.

The Psychosocial Reality of Digital Travel Ingvar Tjostheim,John A. Waterworth,2021-12-06 This open access book takes a fresh look at the nature of the digital travel experience, at a time when more and more people are engaged in online social interaction, games, and other virtual experiences essentially involving online visits to other places. It examines whether these experiences can seem real to the virtual traveller and, if so, under what conditions and on what grounds. The book unpacks philosophical theories relevant to the feeling of being somewhere, emphasising the importance of perception and being-in-the-world. Notions of place are outlined, based on work in tourism studies, human geography, and other applied social fields, with an aim to investigate how and when different experiences of place arise for the traveller and how these relate to telepresence – the sense of being there in another place through digital media. Findings from recent empirical studies of digital travel are presented, including a survey from which the characteristics of "digital travellers" are identified. A review of selected interactive design trends and possibilities leads to the conclusion, which draws these strands together and looks to the future of this topical and expanding field.

Federal Employees' Compensation ACT (Feca) Addison K. James,Filip E. Davis,2012-01-07 The Federal Employees' Compensation Act (FECA) is the workers' compensation program for federal employees. Like all workers' compensation programs, FECA pays disability, survivors, and medical benefits, without fault, to employees who are injured or become ill in the course of their federal employment and the survivors of employees killed on the job. The FECA program is administered by the Department of Labor (DOL) and the costs of benefits are paid by each employees' host agency. Employees of the U.S. Postal Service (USPS) currently comprise the largest group of FECA beneficiaries and are responsible for the largest share of FECA benefits. This book examines the key policy issues facing the FECA today, including the disproportionate share of claims and program costs attributed to postal workers, the payment of FECA benefits after retirement age, the overall generosity of FECA disability benefits as compared with those offered by the states, and the overall administration of the FECA program.

HPLC of Polymers Harald Pasch,Bernd Trathnigg,2012-12-06 Polymers are mainly characterized by molar mass, chemical composition, functionality and architecture. The determination of the complex structure of polymers by chromatographic and spectroscopic methods is one of the major concerns of polymer analysis and characterization. This lab manual describes the experimental approach to the chromatographic analysis of polymers. Different chromatographic methods, their theoretical background, equipment, experimental procedures and applications are discussed. The book will enable polymer chemists, physicists and material scientists as well as students of macromolecular and analytical science to optimize chromatographic conditions for a specific separation problem. Special emphasis is given to the description of applications for homo- and copolymers and polymer blends.
