**OVERCOMING HUNGER AND RURAL POVERTY BRAZILIAN EXPERIENCES** Food and Agriculture Organization of the United Nations, 2018-10-18 Brazil has a long tradition of public policies and efforts to eradicate hunger and poverty. The right to food is enshrined in Amendment No. 64/2010 of Brazil's Constitution as an obligation of the State, and the country has a very progressive food security law that institutionalizes the policy and lays the foundations for broad-based social participation in priority setting, expressed in the National Council on Food and Nutrition Security (CONSEA). It was this wealth of experience (reflected in programmes and plans such as Zero Hunger, Bolsa Família and Brazil Without Extreme Poverty, applied nationwide from 2003 to 2013), together with other factors, that took the country off the Hunger Map in 2014. This report is designed to update the information and describe concrete Brazilian initiatives to facilitate South-South cooperation to a wider audience, including policymakers working to improve food security and fight poverty. In other words, it is a manual of good practice for public authorities, technical personnel, NGOs and the general public in other Latin American, Caribbean and African countries

*Brazil and Climate Change* Viola Eduardo, Matías Franchini, 2017-10-23 Climate change is increasingly a part of the human experience. As the problem worsens, the cooperative dilemma that the issue carries has become evident: climate change is a complex problem that systematically gets insufficient answers from the international system. This book offers an assessment of Brazil's role in the global political economy of climate change. The authors, Eduardo Viola and Matías Franchini expertly review and answer the most common and widely cited questions on whether and in which way Brazil is aggravating or mitigating the climate crisis, including: Is it the benign, cooperative, environmental power that the Brazilian government claims it is? Why was it possible to dramatically reduce deforestation in the Amazon (2005-2010) and, more recently, was there a partial reversion? The book provides an accessible—and much needed—introduction to all those studying the challenges of the international system in the Anthropocene. Through a thorough analysis of Brazil in perspective vis à vis other emerging countries, this book provides an engaging introduction and up to date assessment of the climate reality of Brazil and a framework to analyze the climate performance of major economies, both on emission trajectory and policy profile: the climate commitment approach. Brazil and Climate Change is essential reading for all students of Environmental Studies, Latin American Studies, International Relations and Comparative Politics.

**Understanding the Global Energy Crisis** Richard A. Simmons, Eugene D. Coyle, 2014-03-15 We are facing a global energy crisis caused by world population growth, an escalating increase in demand, and continued dependence on fossil-based fuels for generation. It is widely accepted that increases in greenhouse gas concentration levels, if not reversed, will result in major changes to world climate with consequential effects on our society and economy. This is just the kind of intractable problem that Purdue University's Global Policy Research Institute seeks to address in the Purdue Studies in Public Policy series by promoting the engagement between policy makers and experts in fields such as engineering and technology. Major steps forward in the development and use of technology are required. In order to achieve solutions of the required scale and magnitude within a limited timeline, it is essential that engineers be not only technologically-adept but also aware of the wider social and political issues that policy-makers face. Likewise, it is also imperative that policy makers liaise closely with the academic community in order to realize advances. This book is designed to bridge the gap between these two groups, with a particular emphasis on educating the socially-conscious engineers and technologists of the future. In this accessibly-written volume, central issues in global energy are discussed through interdisciplinary dialogue between experts from both North America and Europe. The first section provides an overview of the nature of the global energy crisis approached from historical, political, and sociocultural perspectives. In the second section, expert contributors outline the technology and policy issues facing the development of major conventional and renewable energy sources. The third and final section explores policy and technology challenges and opportunities in the distribution and consumption of energy, in sectors such as transportation and the built environment. The book's epilogue suggests some future scenarios in energy distribution and use.

**The Music of the Lord of the Rings Films** Doug Adams, 2010 Presents the complete account of the making of the Lord of the Rings trilogy music score, and includes extensive music examples, original manuscript scores, and glimpses into the creative process from the composer.

*The Emissions Gap Report 2016* United Nations Environment Programme, 2016-04-09 The UN Environment Emissions Gap Report assesses the latest scientific studies on current and estimated future greenhouse gas emissions and compares these with the emission levels permissible for the world to progress on a least-cost pathway to achieve the goals of the Paris Agreement. This difference between "where we are likely to be and where we need to be" is known as the "emissions gap". The report explores some of the most important options available for countries to bridge the gap.

*The Emissions Gap Report 2013* United Nations Environment Programme, 2015-02-20 This report confirms and strengthens the conclusions of previous analyses that current pledges and commitments fall short of set goals. It further says that, as emissions of greenhouse gases continue to rise rather than decline, it becomes less likely that emissions will be low enough by 2020 to be on a least-cost pathway towards meeting the 2° C target. As a result, after 2020, the world will have to rely on more difficult, costlier and riskier means of meeting the target. The further from the least-cost level in 2020, the higher these costs and the greater the risks will be. If the gap is not closed or significantly narrowed by 2020, the door to many options to limit temperature increase to 1.5° C at the end of this century will be closed, further increasing the need to rely on accelerated energy-efficiency increases and biomass with carbon capture and storage for reaching the target.

**REDD credits in a global carbon market** Arild Angelsen, Caroline Wang Gierløff, Angelica Mendoza Beltrán, Michel den Elzen, 2014-09-17 How can REDD credits be included in a future global carbon market, and what are the impacts of inclusion? We analyze ten different scenarios through 2020, varying the global emission caps and the REDD rules.

An inclusion of REDD credits without any adjustments in the global cap will lower carbon prices significantly and cause crowding out. The cap must move towards the 2 degrees climate target if REDD inclusion is to maintain high carbon prices and strong incentives for emissions reductions in other sectors. At the same time, reaching the 2 degree target without full REDD inclusion will increase global mitigation costs by more than 50%.

*Developing Eco-Cities Through Policy, Planning, and Innovation: Can It Really Work?* Management Association, Information Resources, 2019-07-05 The worldwide consumption of resources is causing environmental damage at a rate that cannot be sustained. Apart from the resulting environmental and health problems, this trend could threaten economic growth due to rapidly decreasing natural resources and costly solutions. The public sector has a responsibility to stimulate the marketplace in favor of the provision of more resource-efficient and less polluting goods, services, and works in order to support environmental and wider sustainable development objectives. *Developing Eco-Cities Through Policy, Planning, and Innovation: Can It Really Work?* examines the economic, political, social, and environmental objectives essential to the planning and support of future communities. Highlighting a range of topics such as environmental sustainability, waste management, and green cities, this publication is an ideal reference source for environmental engineers, environmentalists, city development planners, urban planners, technology developers, policymakers, industrialists, academicians, and researchers interested in solving environmental issues.

*The Oxford Introductions to U.S. Law* Brian Bix, 2013-03-15 A book about family law is necessarily a book both about family life and the role law can and should take in regulating family life. Individually and together, these are vast topics. American family law is ever-changing and affects every facet of our lives. The Oxford Introductions to U.S. Law: Family Law provides a critical introduction to the enduring topics in the field, including not only an overview of the basic rules, but also the history and principles underlying them. In this short and accessible volume, Brian Bix gives the necessary legal background for understanding current media coverage and political debates in family law. He explores the general principles and fundamental themes that currently dominate legislation and case law in the area while marking trends for change. Topics covered include same-sex marriage, divorce reform, surrogacy, open adoption, domestic violence, and the standards applied to custody battles. Ultimately, *The Oxford Introductions to U.S. Law: Family Law* illuminates our collective struggle to shape the proper role for individuals, families, and government in U.S. family life and family law, providing an essential introduction to the richness and complexity of the subject.

*The Domestic Politics of Global Climate Change* Guri Bang, Arild Underdal, teinar Andresen, 2015-09-25 Why are some countries more willing and able than others to engage in climate change mitigation? *The Domestic Politics of Global Climate Change* compiles insights from experts in comparative politics and international relations to describe and explain climate policy trajectories of seven key actors: Brazil, China, the European Union, India, Japan, Russia, and the United States. Using a common conceptual framework, the authors find that ambitious climate policy change is limited by stable material parameters and that governmental supply of mitigation policies meet (or even exceed) societal demand in most cases. Given the important roles that the seven actors play in addressing global climate change, the book's in-depth comparative analysis will help readers assess the prospects for a new and more effective international climate agreement for 2020 and beyond.

**Baby Markets** Michele Bratcher Goodwin, 2010-02-22 Creating families can no longer be described by heterosexual reproduction in the intimacy of a couple's home and the privacy of their bedroom. To the contrary, babies can be brought into families through complex matrixes involving lawyers, coordinators, surrogates, 'brokers', donors, sellers, endocrinologists, and without any traditional forms of intimacy. In direct response to the need and desire to parent, men, women, and couples - gay and straight - have turned to viable, alternative means: baby markets. This book examines the ways in which Westerners create families through private, market processes. From homosexual couples skirting Mother Nature by going to the assisted reproductive realm and buying the sperm or ova that will complete the reproductive process, to Americans travelling abroad to acquire children in China, Korea, or Ethiopia, market dynamics influence how babies and toddlers come into Western families. Michele Goodwin and a group of contributing experts explore how financial interests, aesthetic preferences, pop culture, children's needs, race, class, sex, religion, and social customs influences the law and economics of baby markets.

**Test Tube Families** Naomi R Cahn, 2009-01-01 The birth of the first test tube baby in 1978 focused attention on the sweeping advances in assisted reproductive technology (ART), which is now a multi-billion-dollar business in the United States. Sperm and eggs are bought and sold in a market that has few barriers to its skyrocketing growth. While ART has been an invaluable gift to thousands of people, creating new families, the use of someone else's genetic material raises complex legal and public policy issues that touch on technological anxiety, eugenics, reproductive autonomy, identity, and family structure. How should the use of gametic material be regulated? Should recipients be able to choose the "best" sperm and eggs? Should a child ever be able to discover the identity of her gamete donor? Who can claim parental rights? Naomi R. Cahn explores these issues and many more in *Test Tube Families*, noting that although such questions are fundamental to the new reproductive technologies, there are few definitive answers currently provided by the law, ethics, or cultural norms. As a new generation of donor kids comes of age, Cahn calls for better regulation of ART, exhorting legal and policy-making communities to cease applying piecemeal laws and instead create legislation that sustains the fertility industry while simultaneously protecting the interests of donors, recipients, and the children that result from successful transfers.

*Earth Stewardship* Ricardo Rozzi, F. Stuart Chapin III, J. Baird Callicott, S.T.A. Pickett, Mary E. Power, Juan J. Armesto, Roy H. May Jr., 2015-03-26 This book advances Earth Stewardship toward a planetary scale, presenting a range of ecological worldviews, practices, and institutions in different parts of the world and to use them as the basis for considering what we could learn from one another, and what we could do together. Today, inter-hemispheric, intercultural, and transdisciplinary collaborations for Earth Stewardship are an imperative. Chapters document pathways that are being forged by socio-ecological research networks, religious alliances, policy actions, environmental citizenship and participation, and new forms of conservation, based on both traditional and

contemporary ecological knowledge and values. "The Earth Stewardship Initiative of the Ecological Society of America fosters practices to provide a stable basis for civilization in the future. Biocultural ethic emphasizes that we are co-inhabitants in the natural world; no matter how complex our inventions may become" (Peter Raven).

*Legacies of the Left Turn in Latin America* Manuel Balán, Françoise Montambeault, 2020-01-31 *Legacies of the Left Turn in Latin America: The Promise of Inclusive Citizenship* contains original essays by a diverse group of leading and emerging scholars from North America, Europe, and Latin America. The book speaks to wide-ranging debates on democracy, the left, and citizenship in Latin America. What were the effects of a decade and a half of left and center-left governments? The central purpose of this book is to evaluate both the positive and negative effects of the Left turn on state-society relations and inclusion. Promises of social inclusion and the expansion of citizenship rights were paramount to the center-left discourses upon the factions' arrival to power in the late 1990s and early 2000s. This book is a first step in understanding to what extent these initial promises were or were not fulfilled, and why. In analyzing these issues, the authors demonstrate that these years yield both signs of progress in some areas and the deepening of historical problems in others. The contributors to this book reveal variation among and within countries, and across policy and issue areas such as democratic institution reforms, human rights, minorities' rights, environmental questions, and violence. This focus on issues rather than countries distinguishes the book from other recent volumes on the left in Latin America, and the book will speak to a broad and multi-dimensional audience, both inside and outside the academic world. Contributors: Manuel Balán, Françoise Montambeault, Philip Oxhorn, Maxwell A. Cameron, Kenneth M. Roberts, Nathalia Sandoval-Rojas, Daniel M. Brinks, Benjamin Goldfrank, Roberta Rice, Elizabeth Jelin, Celina Van Dembroucke, Nora Nagels, Merike Blofield, Jordi Díez, Eve Bratman, Gabriel Kessler, Olivier Dabène, Jared Abbott, Steve Levitsky

*The New Kinship* Naomi R. Cahn, 2013-01-07 No federal law in the United States requires that egg or sperm donors or recipients exchange any information with the offspring that result from the donation. Donors typically enter into contracts with fertility clinics or sperm banks which promise them anonymity. The parents may know the donor's hair color, height, IQ, college, and profession; they may even have heard the donor's voice. But they don't know the donor's name, medical history, or other information that might play a key role in a child's development. And, until recently, donor-conceived offspring typically didn't know that one of their biological parents was a donor. But the secrecy surrounding the use of donor eggs and sperm is changing. And as it does, increasing numbers of parents and donor-conceived offspring are searching for others who share the same biological heritage. When donors, recipients, and "donor kids" find each other, they create new forms of families that exist outside of the law. *The New Kinship* details how families are made and how bonds are created between families in the brave new world of reproductive technology. Naomi Cahn, a nationally-recognized expert on reproductive technology and the law, shows how these new kinship bonds dramatically exemplify the ongoing cultural change in how we think about family. The issues Cahn explores in this book will resonate with anyone—and everyone—who has struggled with questions of how to define themselves in connection with their own biological, legal, or social families.

*Strengthening Cooperation over Transboundary Groundwater Resources* Gabriel Eckstein, Alice Aureli, 2021-12-20 Groundwater is humanity's most vital supply of freshwater. Freshwater resources contained in aquifer systems globally are two orders of magnitude greater than those found in all rivers, lakes, and other surface freshwaters combined. Moreover, approximately one half of the world's population today is dependent on groundwater for its basic needs. While these truisms are widely acknowledged, an additional reality is now recognized – many of these subsurface freshwater reservoirs are actually transboundary formations shared amongst two or more nations. In fact, around 600 transboundary aquifers have been identified worldwide. They underlie the territory of nearly every non-island nation and are found in both humid and arid environments. Surprisingly, though, only a handful of transboundary aquifers worldwide are subject to any type of formal or informal international agreement. Transboundary groundwater resources are now receiving growing attention among the international community. Questions are being raised about how they should be managed, allocated and protected, what rights aquifer riparians can enjoy, and what responsibilities these aquifer states might owe to neighbouring aquifer riparians. This book considers all these various aspects of the management and regulation of transboundary groundwater resources. It also presents case studies and explores recent efforts to engage the international community on best practices and global standards for governing transboundary aquifers. As communities and nations continue to expand their reliance on these critical sources of freshwater, they will have to address such issues and develop governance regimes for these shared subsurface resources. The chapters in this book were originally published as a special issue of *Water International*.
