Heat Pipe Design and Technology Bahman Zohuri,2016-04-28 This book provides a practical study of modern heat pipe engineering, discussing how it can be optimized for use on a wider scale. An introduction to operational and design principles, this book offers a review of heat and mass transfer theory relevant to performance, leading into and exploration of the use of heat pipes, particularly in high-heat flux applications and in situations in which there is any combination of non-uniform heat loading, limited airflow over the heat generating components, and space or weight constraints. Key implementation challenges are tackled, including load-balancing, materials characteristics, operating temperature ranges, thermal resistance, and operating orientation. With its presentation of mathematical models to calculate heat transfer limitations and temperature gradient of both high- and low-temperature heat pipes, the book compares calculated results with the available experimental data. It also includes a series of computer programs developed by the author to support presented data, aid design, and predict performance.

Hazardous substances in plastics Stenmarck, Åsa ,Belleza, Elin L. ,Fråne, Anna ,Busch, Niels ,2017-02-08 The aim of the project is to create knowledge on how plastics recycling can increase without increasing the risk of emitting hazardous substances to the environment.The first general conclusion is that to be able to increase recycling there are measures needed at different levels. The following areas are of interest: • Legislation: new legislation is not necessary, but harmonisation and clear guidance to the existing one is. • Market: to create a market safety on content is needed. • If substances added are less hazardous the recycled raw material would be "more safe" to use. • There should be higher attention put on the knowledge of the recyclers. • Traceability and content: Further work on labelling reaching the recycle part of the value chain needs to be developed. It is also needed to develop a systematic approach towards risk assessments linked to recycling.

Addictive Consumption Gerda Reith,2018-09-03 In this engaging new book, Gerda Reith explores key theoretical concepts in the sociology of consumption. Drawing on the ideas of Foucault, Marx and Bataille, amongst others, she investigates the ways that understandings of 'the problems of consumption' change over time, and asks what these changes can tell us about their wider social and political contexts. Through this, she uses ideas about both consumption and addiction to explore issues around identity and desire, excess and control and reason and disorder. She also assesses how our concept of 'normal' consumption has grown out of efforts to regulate behaviour historically considered as disruptive or deviant, and how in the contemporary world the 'dark side' of consumption has been medicalised in terms of addiction, pathology and irrationality. By drawing on case studies of drugs, food and gambling, the volume demonstrates the ways in which modern practices of consumption are rooted in historical processes and embedded in geopolitical structures of power. It not only asks how modern consumer culture came to be in the form it is today, but also questions what its various manifestations can tell us about wider issues in capitalist modernity. Addictive Consumption offers a compelling new perspective on the origins, development and problems of consumption in modern society. The volume's interdisciplinary profile will appeal to scholars and students in sociology, psychology, history, philosophy and anthropology.
