The Arapaho Language Andrew Cowell, Alonzo Moss Sr., 2011-05-18 The Arapaho Language is the definitive reference grammar of an endangered Algonquian language. Arapaho differs strikingly from other Algonquian languages, making it particularly relevant to the study of historical linguistics and the evolution of grammar. Andrew Cowell and Alonzo Moss Sr. document Arapaho's interesting features, including a pitch-based accent system with no exact Algonquian parallels, radical innovations in the verb system, and complex contrasts between affirmative and non-affirmative statements. Cowell and Moss detail strategies used by speakers of this highly polysynthetic language to form complex words and illustrate how word formation interacts with information structure. They discuss word order and discourse-level features, treat the special features of formal discourse style and traditional narratives, and list gender-specific particles, which are widely used in conversation. Appendices include full sets of inflections for a variety of verbs. Arapaho is spoken primarily in Wyoming, with a few speakers in Oklahoma. The corpus used in *The Arapaho Language* spans more than a century of documentation, including multiple speakers from Wyoming and Oklahoma, with emphasis on recent recordings from Wyoming. The book cites approximately 2,000 language examples drawn largely from natural discourse - either recorded spoken language or texts written by native speakers. With *The Arapaho Language*, Cowell and Moss have produced a comprehensive document of a language that, in its departures from its nearest linguistic neighbors, sheds light on the evolution of grammar.

Recognizing Textual Entailment Ido Dagan, Dan Roth, Fabio Zanzotto, Mark Sammons, 2022-06-01 In the last few years, a number of NLP researchers have developed and participated in the task of Recognizing Textual Entailment (RTE). This task encapsulates Natural

Language Understanding capabilities within a very simple interface: recognizing when the meaning of a text snippet is contained in the meaning of a second piece of text. This simple abstraction of an exceedingly complex problem has broad appeal partly because it can be conceived also as a component in other NLP applications, from Machine Translation to Semantic Search to Information Extraction. It also avoids commitment to any specific meaning representation and reasoning framework, broadening its appeal within the research community. This level of abstraction also facilitates evaluation, a crucial component of any technological advancement program. This book explains the RTE task formulation adopted by the NLP research community, and gives a clear overview of research in this area. It draws out commonalities in this research, detailing the intuitions behind dominant approaches and their theoretical underpinnings. This book has been written with a wide audience in mind, but is intended to inform all readers about the state of the art in this fascinating field, to give a clear understanding of the principles underlying RTE research to date, and to highlight the short- and long-term research goals that will advance this technology.

Water Resources Planning and Management R. Quentin Grafton, Karen Hussey, 2011-02-17 Water is an increasingly critical issue at the forefront of global policy change, management and planning. There are growing concerns about water as a renewable resource, its availability for a wide range of users, aquatic ecosystem health, and global issues relating to climate change, water security, water trading and water ethics. This handbook provides the most comprehensive reference ever published on water resource issues. It brings together multiple disciplines to understand and help resolve problems of water quality and scarcity from a global perspective. Its case studies and 'foundation' chapters will be greatly valued by students, researchers and professionals involved in water resources, hydrology, governance and public policy, law, economics, geography and environmental studies.
