A Decadal Survey of the Social and Behavioral Sciences National Academies of Sciences, Engineering, and Medicine,Division of Behavioral and Social Sciences and Education,Board on Behavioral, Cognitive, and Sensory Sciences,Committee on a Decadal Survey of Social and Behavioral Sciences for Applications to National Security,2019-07-26 The primary function of the intelligence analyst is to make sense of information about the world, but the way analysts do that work will look profoundly different a decade from now. Technological changes will bring both new advances in conducting analysis and new risks related to technologically based activities and communications around the world. Because these changes are virtually inevitable, the Intelligence Community will need to make sustained collaboration with researchers in the social and behavioral sciences (SBS) a key priority if it is to adapt to these changes in the most productive ways. A Decadal Survey Of The Social and Behavioral Sciences provides guidance for a 10-year research agenda. This report identifies key opportunities in SBS research for strengthening intelligence analysis and offers ideas for integrating the knowledge and perspectives of researchers from these fields into the planning and design of efforts to support intelligence analysis.

The Global Forest Sector Eric Hansen,Rajat Panwar,Richard Vlosky,2013-12-04

Changes in production, demand, supply, and trade patterns; the impact of green building and bioenergy on industry practices and policy infrastructure; and new economies with production advantages and large consumption bases all present challenges and opportunities in the forest sector. With contributions from leading experts in academia and professional organizations, *The Global Forest Sector: Changes, Practices, and Prospects* fills a gap in the literature that is preventing students, scholars, and policy makers from developing a timely, structured, big-picture view of forest sector business. In addition, the book reviews current thinking on a wide variety of business management issues in the forest sector. The book covers managing change in the global forest sector and the impact of globalization on forest users. It discusses markets and market forces, new products and product categories, and the influence of China and Russia. The book then examines the environmental paradigm, including environmental activism, sustainability, and the impact of green building and bioenergy. The book concludes with coverage of the role of information technology, corporate social responsibility, innovation, and next steps. Overall, this book helps readers both develop a bird's eye view of the changes surrounding the forest sector as well as have a magnified view of numerous managerial issues associated with these changes. The content paints a picture of the current and changing forest sector including the state of forests, the nature of markets, the newly emerged patterns of stakeholder impact, and evolution of key business practices. It provides the foundation needed to develop the conservation-based economy required for future success in the global forest sector.

Trade in the Ancient Mediterranean Taco Terpstra, 2019-04-09 How ancient Mediterranean trade thrived through state institutions From around 700 BCE until the first centuries CE, the Mediterranean enjoyed steady economic growth through trade, reaching a level not to be regained until the early modern era. This process of growth coincided with a process of state formation, culminating in the largest state the ancient Mediterranean would ever know, the Roman Empire. Subsequent economic decline coincided with state disintegration. How are the two processes related? In *Trade in the Ancient Mediterranean*, Taco Terpstra investigates how the organizational structure of trade benefited from state institutions. Although enforcement typically depended on private actors, traders could utilize a public infrastructure, which included not only courts and legal frameworks but also socially cohesive ideologies. Terpstra details how business practices emerged that were based on private order, yet took advantage of public institutions. Focusing on the activity of both private and public economic actors—from Greek city councilors and Ptolemaic officials to long-distance traders and Roman magistrates and financiers—Terpstra illuminates the complex relationship between economic development and state structures in the ancient Mediterranean.

Application of Bacterial Pigments as Colorant Wan Azlina Ahmad, Wan Yunus Wan Ahmad, Zainul Akmar Zakaria, Nur Zulaikha Yusof, 2011-10-14 Environmental concerns regarding continuous use of synthetic dyes saw a revival in the demand for natural dyes as natural dyes exhibit better biodegradability and generally have a higher compatibility with the environment. However, one of the limitations on the use of natural dyes or pigments is the low extraction yield factors (a few grams of pigment per kg of dried raw material). Therefore, the exploitation of other biological sources such as fungi, bacteria and cell cultures offers interesting alternative. Microbial pigments such as from bacterial origins offer the advantage in terms of production compared to pigments extracted from vegetables or animals, due to its simple cell and fast culturing technique. This book offers interesting insight into initial works carried out to demonstrate the potential use of bacterial pigment as colorant for various applications.

Social and Behavioral Sciences for National Security National Academies of Sciences, Engineering, and Medicine,Division of Behavioral and Social Sciences and Education,Board on Behavioral, Cognitive, and Sensory Sciences,2017-06-12 In the coming years, complex domestic and international environments and challenges to national security will continue. Intelligence analysts and the intelligence community will need access to the appropriate tools and developing knowledge about threats to national security in order to provide the best information to policy makers. Research and knowledge from the social and behavioral sciences (SBS) can help inform the work of intelligence analysis; however, in the past, bringing important findings from research to

bear on the day-to-day work of intelligence analysis has been difficult. In order to understand how knowledge from science can be directed and applied to help the intelligence community fulfill its critical responsibilities, the National Academies of Sciences, Engineering, and Medicine will undertake a 2-year survey of the social and behavioral sciences. To launch this discussion, a summit designed to highlight cutting-edge research and identify future directions for research in a few areas of the social and behavioral sciences was held in October 2016. This publication summarizes the presentations and discussions from the summit.

Global University Rankings and the Politics of Knowledge Michelle Stack,2021-06 For many institutions, to ignore your university's ranking is to become invisible, a risky proposition in a competitive search for funding. But rankings tell us little if anything about the education, scholarship, or engagement with communities offered by a university. Drawing on a range of research and inquiry-based methods, *Global University Rankings and the Politics of Knowledge* exposes how universities became servants to the education industry and its impact. Conceptually unique in its scope, *Global University Rankings and the Politics of Knowledge* addresses the lack of empirical research behind university and journal ranking systems. Chapters from internationally recognized scholars in decolonial studies provide readers with robust frameworks to understand the intersections of coloniality and Indigeneity and how they play out in higher education. Contributions from diverse geographical and disciplinary contexts explore the political economy of rankings within the contexts of the Global North and South, and examine alternatives to media-

driven rankings. This book allows readers to consider the intersections of power and knowledge within the wider contexts of politics, culture, and the economy, to explore how assumptions about gender, social class, sexuality, and race underpin the meanings attached to rankings, and to imagine a future that confronts and challenges cognitive, environmental, and social injustice.

Using Science as Evidence in Public Policy National Research Council,Division of Behavioral and Social Sciences and Education,Committee on the Use of Social Science Knowledge in Public Policy,2012-10-31 Using Science as Evidence in Public Policy encourages scientists to think differently about the use of scientific evidence in policy making. This report investigates why scientific evidence is important to policy making and argues that an extensive body of research on knowledge utilization has not led to any widely accepted explanation of what it means to use science in public policy. Using Science as Evidence in Public Policy identifies the gaps in our understanding and develops a framework for a new field of research to fill those gaps. For social scientists in a number of specialized fields, whether established scholars or Ph.D. students, Using Science as Evidence in Public Policy shows how to bring their expertise to bear on the study of using science to inform public policy. More generally, this report will be of special interest to scientists who want to see their research used in policy making, offering guidance on what is required beyond producing quality research, beyond translating results into more understandable terms, and beyond brokering the results through intermediaries, such as think tanks, lobbyists, and advocacy groups. For administrators and faculty in public policy programs and schools, Using Science as Evidence in Public Policy identifies critical elements of instruction that will better equip graduates to promote the use of science in policy making.
