Risk Assessment in Air Traffic Management Javier
Alberto Pérez Castán, Álvaro Rodríguez

Sanz,2020-03-18 One of the most complex challenges for the future of aviation is to ensure a safe integration of the expected air traffic demand. Air traffic is expected to almost double its current value in 20 years, which cannot be managed without the development and implementation of a safe air traffic management (ATM) system. In ATM, risk assessment is a crucial cornerstone to validate the operation of air traffic flows, airport processes, or navigation accuracy. This book tries to be a focal point and motivate further research by encompassing crosswise and widespread knowledge about this critical and exciting issue by bringing to light the different purposes and methods developed for risk assessment in ATM.

The book also contains a detailed analysis of the implementation and economic viability of perovskite solar cells, highlighting what photovoltaic devices need to be generated by low

cost, non-toxic, earth abundant materials using environmentally scalable processes. This book is a valuable resource engineers, scientists and researchers, and all those who wish to broaden their knowledge on flexible perovskite solar cells. Includes contributions by leading solar cell academics, industrialists, researchers and institutions across the globe Addresses different photovoltaics fields with tailored content for what makes perovskite solar cells different Provides commercialization examples of large-scale perovskite solar technology, giving users detailed analysis on the implementation, technical challenges and economic viability of perovskite solar cells

Advances in Geroscience Felipe Sierra, Ronald Kohanski, 2015-11-10 This book provides the first comprehensive overview of a new scientific discipline termed Geroscience. Geroscience examines the molecular and cellular mechanisms that might explain why aging is the main risk factor for most chronic diseases affecting the elderly population. Over the past few decades, researchers have made impressive progress in understanding the genetics, biology and physiology of aging. This book presents vital research that can help readers to better understand how aging is a critical malleable risk factor in most chronic diseases, which, in turn, could lead to interventions that can help increase a healthy lifespan, or 'healthspan.' The book begins with an analysis of the Geroscience hypothesis, as well as the epidemiological underpinnings that define aging as a candidate main risk factor for most

chronic diseases. Next, each chapter focuses on one particular disease, or group of diseases, with an emphasis on how basic molecular and cellular biology might explain why aging is a major risk factor for it. Coverage in the book includes: cancer, cardiovascular disease, dementias, stroke, Parkinson's and Alzheimer's diseases, osteoporosis, arthritis, diabetes asthma, emphysema, kidney disease, vision impairment, and AIDS/HIV. It finishes with a chapter on pain in the elderly and an overview of future steps needed to bring the newly acquired knowledge into the clinic and the public at large.

Archaeology of Piedra Museo Locality Laura Miotti, Monica Salemmé, Darío Herms, 2022-02-04 This book highlights the knowledge about landscapes and characteristics of the earliest hunter-gatherer lifeway in Southern Patagonia. It presents an analysis of the archaeological investigations carried out during three decades by an interdisciplinary team that involved archaeologists, anthropologists, paleontologists, geologists and specialists in pollen and diatoms. The database yielded was recovered from systematic survey and excavations from the Pleistocene and Holocene stratigraphic layers of the rockshelter known as AEP-1, Piedra Museo Locality, situated in the central plateau of Santa Cruz Province, Argentina. Piedra Museo is a unique place in the world of high academic interest with some of the earliest archaeological remains in the Americas. Researchers defined two strata and several Stratigraphic units in the site based on the sedimentological and pedological characteristics.

The depositional zones contain archaeological remains that are interpreted as hunting events corresponding to two main different occasions in the human colonization of the region, and a third human occupation during the Middle Holocene. Last one occurred then of the massive rockshelter roof collapse. The faunal remains led to a new approach to the palaeoenvironmental evolution of this enclosed basin. This volume describes the management of lithic raw materials and social networks from first human occupation of the Patagonian region to territorial consolidation of hunter-gatherer societies.

This title is available as Open Access via Cambridge Core.

Meditation as Contemplative Inquiry Arthur Zajonc,2009 When we turn to meditation, we are turning toward renewal, peace, and insight. Initially, we may take up contemplative practice as a means of tapping into the abundant resources of the mind and heart that bring serenity, but the meditative journey leads further--to the place where wisdom and love unite. In *Meditation as Contemplative Inquiry*, Arthur Zajonc offers an overview of the meditative life, weaving practical instruction together with the guidance and inspiration of the world's great teachers, from Rudolf Steiner to Rumi, and from Goethe to the sages of Asia. Zajonc reminds us that an ethic of

humility grounds all practice, and that care of the soul is the basis for sound spiritual reflection and understanding. The author carefully describes each stage of the path and includes many recommended practices. Meditation as Contemplative Inquiry is the fruit of many years of personal practice and teaching. Arthur Zajonc developed his orientation toward meditation through working with hundreds of university students and professors, as well as with contemplative groups in the U.S., Europe, and Australia.

Natural Hazard Mitigation Alessandra

Jerolleman, John J. Kiefer, 2012-11-26 One of the four core phases of emergency management, hazard mitigation is essential for reducing disaster effects on human populations and making communities more resilient to the impacts of hazards. Presenting an up-to-date look at the changing nature of disasters, *Natural Hazard Mitigation* offers practical guidance on the implementation and selection of hazard mitigation programs and projects. Based on real-world applications, the book includes case studies that present a thorough explanation of the various issues involved. The contributors describe the value and potential of mitigation efforts and explain how to convince public officials and communities of that value. They also discuss how to better involve the community and uniquely tailor solutions to regional and local situations. The book begins with an overview of the history of hazard mitigation with a focus on the Disaster Mitigation Act of 2000. It examines where hazard

mitigation fits into emergency management and addresses some of the challenges that can arise in navigating the various intergovernmental relationships involved in hazard mitigation. The remaining chapters explore: Public-private partnerships for hazard mitigation at the local level The role currently played by the private sector and how communities can best make use of contractors How to maximize the use of the National Flood Insurance Program and the Community Ratings System Risk communications as a key component of encouraging hazard mitigation Legal issues relevant to hazard mitigation Ways to actively engage the community and how to advocate for hazard mitigation policy How state and local governments can promote and fund mitigation without utilizing federal dollars The challenges associated with volunteers and how to best make use of this resource The area analysis as an innovative means of addressing flood risk at the block or neighborhood level The book includes learning objectives, key terms, and end-of-chapter questions to enhance comprehension. It concludes with a discussion of tools that local practitioners can use and provides an appendix with additional links and resources. This volume is an essential reference for both students and professionals in the ongoing effort to better prepare communities against the effects of natural hazards.

From Mindfulness to Heartfulness Stephen Murphy-Shigematsu, 2018-02-09 "A rare gem . . . filled with valuable and authentic teachings about practical and spiritual paths toward balance and

understanding.” –Richard Katz, PhD, author of *Indigenous Healing Psychology* Millions have found mindfulness to be a powerful practice for reducing stress, enhancing attention, and instilling tranquility. But it can offer so much more—it can transform you, make you more fully awake, alive, and aware of your connection to all beings. In Japanese, the character that best expresses mindfulness, 心, consists of two parts—the top part, 今, meaning “now,” and the bottom part, 心, meaning “heart.” Using stories from his own life as the son of an Irish father and a Japanese mother, a professor in Japan and America, a psychotherapist, a father, and a husband, Stephen Murphy-Shigematsu describes eight “heartfulness” principles that help us realize that the deepest expression of an enlightened mind is found in our relation to others. “He shows us through stories and practices how to expand our contemplative lives from being self-focused to being inclusive, connected, compassionate, and responsible . . . Each story is a jewel, opening the heart. He connects heartfulness to social justice, leadership, and education and offers simple, direct instructions for seven heartfelt practices.” –Mirabai Bush, author of *Walking Each Other Home* (with Ram Dass) “Resonant with Stephen’s kindness, heartfulness, and wisdom and filled with excellent exercises and practical guides, this lovely volume will be a friend and guide to all those intent on creating and sustaining thriving lives, workplaces, relationships, and communities.” –Dan Barbezat, Professor of Economics, Amherst College

Dynamics of the Pantanal Wetland in South America Ivan Bergier,Mario Luis Assine,2015-11-30 This book provides readers with in-depth insights into the changes in the Pantanal wetland from its formation to the actual and likely future states. It reveals that today's Pantanal is an evolutionary consequence of geological, ecological and, more recently, man-made events taking place at distinct space-time intervals. Topics include geotectonics and sun-earth interactions, which largely dictate the rate of drastic changes that eventually disrupt ecological stability and radically rebuild the regional landscape. Furthermore, the biota-climate system is discussed as a major driver reshaping the ecohydrology functioning of the landscape on an intermediate timescale. Also covered are major changes in the landscape ecohydrology and biodiversity due to recent land-use and climate changes induced by

humankind in the Anthropocene. The ability to recognize how those temporal scales impact the Pantanal wetland provides the opportunity for wise management approaches and the sustainable development of the region.

A Framework to Guide Selection of Chemical Alternatives National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Board on Chemical Sciences and Technology, Committee on the Design and Evaluation of Safer Chemical Substitutions: A Framework to Inform Government and Industry Decisions, 2014-10-29 Historically, regulations governing chemical use have often focused on widely used chemicals and acute human health effects of exposure to them, as well as their potential to cause cancer and other adverse health effects. As scientific knowledge has expanded there has been an increased awareness of the mechanisms through which chemicals may exert harmful effects on human health, as well as their effects on other species and ecosystems. Identification of high-priority chemicals and other chemicals of concern has prompted a growing number of state and local governments, as well as major companies, to take steps beyond existing hazardous chemical federal legislation. Interest in approaches and policies that ensure that any new substances substituted for chemicals of concern are assessed as carefully and thoroughly as possible has also burgeoned. The overarching goal of these approaches is to avoid regrettable substitutions, which occur when a toxic chemical is replaced by another chemical that later proved

unsuitable because of persistence, bioaccumulation, toxicity, or other concerns. Chemical alternative assessments are tools designed to facilitate consideration of these factors to assist stakeholders in identifying chemicals that may have the greatest likelihood of harm to human and ecological health, and to provide guidance on how the industry may develop and adopt safer alternatives. A Framework to Guide Selection of Chemical Alternatives develops and demonstrates a decision framework for evaluating potentially safer substitute chemicals as primarily determined by human health and ecological risks. This new framework is informed by previous efforts by regulatory agencies, academic institutions, and others to develop alternative assessment frameworks that could be operationalized. In addition to hazard assessments, the framework incorporates steps for life-cycle thinking - which considers possible impacts of a chemical at all stages including production, use, and disposal - as well as steps for performance and economic assessments. The report also highlights how modern information sources such as computational modeling can supplement traditional toxicology data in the assessment process. This new framework allows the evaluation of the full range of benefits and shortcomings of substitutes, and examination of tradeoffs between these risks and factors such as product functionality, product efficacy, process safety, and resource use. Through case studies, this report demonstrates how different users in contrasting decision contexts with diverse

priorities can apply the framework. This report will be an essential resource to the chemical industry, environmentalists, ecologists, and state and local governments.

Social Justice and Neoliberalism Professor Adrian Smith, Professor Alison Stenning, Katie Willis, 2009-05-15 The continuing expansion of neoliberalism into ever more spaces and spheres of life has profound implications for social justice. Despite the number of policies designed to target 'social exclusion', people in many communities continue to be marginalized by economic restructuring. *Social Justice and Neoliberalism* explores the connections between neoliberalism, social justice and exclusion. The authors raise critical questions about the extent to which neoliberal programmes are able to deliver social justice in different locations around the world. The book offers grounded, theoretically oriented, empirically rich analysis that critiques neoliberalism while understanding its material impacts. It also stresses the need to extend analyses beyond the dominant spheres of capitalism to look at the ways in which communities resist and remake the economic and social order, through contestation and protest but also in their everyday lives. Global in scope, this book brings together writers who examine these themes in the global South, the former 'communist' East and the West, using the experience of marginal peoples, places and communities to challenge our conceptions of capitalism and its geographies.

True Truffle (Tuber spp.) in the World
Alessandra Zambonelli, Mirco Iotti, Claude

Murat,2016-07-26 This book focuses on the taxonomic diversity of the genus *Tuber* as economically important truffles. In contributions by internationally respected scientists, it examines truffle systematics, interactions with abiotic and biotic environments, strategies for spore dispersal, and molecular processes in truffles. Topics discussed include: evolutionary theories and phylogeny of *Tuber* species from Asia, Europe and North-America; the influence of climate on the natural distribution of *Tuber* species and fruiting body production, soil characteristics and vegetation in natural habitats; tools for tracing truffles in soil, host diversity, truffle inhabiting fungi and truffle-associated bacteria; and the relationships of small mammals and wild boars with truffles, as well as the smell of truffles. This book offers a valuable reference guide for all researchers working in the fields of mycology, ecology and the soil sciences, and will also be useful for farmers and foresters interested in truffle cultivation worldwide.

Health Care Benchmarking and Performance Evaluation Yasar A. Ozcan,2014-07-01 This new edition continues to emphasize the use of data envelopment analysis (DEA) to create optimization-based benchmarks within hospitals, physician group practices, health maintenance organizations, nursing homes and other health care delivery organizations. Suitable for graduate students learning DEA applications in health care as well as for practicing administrators, it is divided into two sections covering methods and applications. Section I considers efficiency

evaluations using DEA; returns to scale; weight restricted (multiplier) models; non-oriented or slack-based models, including in this edition two versions of non-controllable variable models and categorical variable models; longitudinal (panel) evaluations and the effectiveness dimension of performance evaluation. A new chapter then looks at new and advanced models of DEA, including super-efficiency, congestion DEA, network DEA, and dynamic network models. Mathematical formulations of various DEA models are placed in end-of-chapter appendices. Section II then looks at health care applications within particular settings, chapter-by-chapter, including hospitals, physician practices, nursing homes and health maintenance organizations (HMOs). Other chapters then explore home health care and home health agencies; dialysis centers, community mental health centers, community-based your services, organ procurement organizations, aging agencies and dental providers; DEA models to evaluate provider performance for specific treatments, including stroke, mechanical ventilation and perioperative services. A new chapter then examines international-country-based applications of DEA in health care in 16 different countries, along with OECD and multi-country studies. Most of the existing chapters in this section were expanded with recent applications. Included with the book is online access to a learning version of DEA Solver software, written by Professor Kaoru Tone, which can solve up to 50 DMUs for various DEA models listed in the User's Guide at the end of the book.

Rail Transport–Systems Approach Aleksander Sładkowski, 2017-03-08 This book shows how the systems approach is employed by scientists in various countries to solve specific problems concerning railway transport. In particular, the

book describes the experiences of scientists from Romania, Germany, the Czech Republic, the UK, Russia, Ukraine, Lithuania and Poland. For many of these countries there is a problem with the historical differences between the railways. In particular, there are railways with different rail gauges, with different signaling and communication systems, with different energy supplies and, finally, with different political systems, which are reflected in the different approaches to the management of railway economies. The book's content is divided into two main parts, the first of which provides a systematic analysis of individual means of providing and maintaining rail transport. In turn, the second part addresses infrastructure and management development, with particular attention to security issues. Though primarily written for professionals involved in various problems concerning railway transport, the book will also benefit manufacturers, railway technical staff, managers, and students with transport specialties, as well as a wide range of readers interested in learning more about the current state of transport in different countries.
