The Future of Packaging Tom Szaky,2019-02-05 Only 35 percent of the 240 million metric tons of waste generated in the United States alone gets recycled, according to the Environmental Protection Agency. This extraordinary collection shows how manufacturers can move from a one-way take-make-waste economy that is burying the world in waste to a circular, make-use-recycle economy. Steered by Tom Szaky, recycling pioneer, eco-capitalist, and founder and CEO of TerraCycle, each chapter is coauthored by an expert in his or her field. From the distinct perspectives of government leaders, consumer packaged goods companies, waste management firms, and more, the book explores current issues of production and consumption, practical steps for improving packaging and reducing waste today, and big ideas and concepts that can be carried forward. Intended to help every business from a small start-up to a large established consumer product company, this book serves as a source of knowledge and inspiration. The message from these pioneers is not to scale back but to innovate upward. They offer nothing less than a guide to designing ourselves out of waste and into abundance.

Widescreen Worldwide John Belton, Sheldon Hall, Stephen Neale, 2010 Examining widescreen cinema as a worldwide aesthetic and industrial phenomenon, the essays in this volume situate the individual expressions of this new technology within the larger cultural and industrial practices that inform them. What Hollywood sought to market globally as CinemaScope, SuperScope, Techniscope, Technirama, and Panavision took indigenous form in a host of compatible anamorphic formats developed around the world. The book documents how the aesthetics of the first wave of American widescreen films underwent revision in Europe and Asia as filmmakers brought their own idiolect to the language of widescreen mise-en-scène, editing, and sound practices. The work of Otto Preminger, Anthony Mann, Samuel Fuller, Sam Peckinpah, Seijun Suzuki, Kihachi Okamoto, and Tai Kato, among others, is addressed.

Team Geek Brian W. Fitzpatrick, Ben Collins-Sussman, 2012-07-06 In a perfect world, software engineers who produce the best code are the most successful. But in our perfectly messy world, success also depends on how you work with people to get your job done. In this highly entertaining book, Brian Fitzpatrick and Ben Collins-Sussman cover basic patterns and anti-patterns for working with other people, teams, and users while trying to develop software. This is valuable information from two respected software engineers whose popular series of talks—including Working with Poisonous People—has attracted hundreds of thousands of followers. Writing software is a team sport, and human factors have as much influence on the outcome as technical factors. Even if you’ve spent decades learning the technical side of programming, this book teaches you about the often-overlooked human component. By learning to collaborate and investing in the soft skills of software engineering, you can have a much greater impact for the same amount of effort. Team Geek was named as a Finalist in the 2013 Jolt Awards from Dr. Dobb's Journal. The publication's panel of judges chose five notable books, published during a 12-month period ending June 30, that every serious programmer should read.

Moon-face and Other Stories Jack London, 1906 JACK LONDON (1876-1916), American novelist, born in San Francisco, the son of an itinerant astrologer and a spiritualist mother. He grew up in poverty, scratching a living in various legal and illegal ways -robbing the oyster beds, working in a canning factory and a jute mill, serving aged 17 as a common sailor, and taking part in the Klondike gold rush of 1897. This

various experience provided the material for his works, and made him a socialist. The son of the Wolf (1900), the first of his collections of tales, is based upon life in the Far North, as is the book that brought him recognition, The Call of the Wild (1903), which tells the story of the dog Buck, who, after his master's death, is lured back to the primitive world to lead a wolf pack. Many other tales of struggle, travel, and adventure followed, including The Sea-Wolf (1904), White Fang (1906), South Sea Tales (1911), and Jerry of the South Seas (1917). One of London's most interesting novels is the semi-autobiographical Martin Eden (1909). He also wrote socialist treatises, autobiographical essays, and a good deal of journalism.

Medical genetics 1 John Kaisermann, Milos Pawlowski, Yavor Mendel, Medical genetics encompasses many different areas, including the clinical practice of doctors, genetic counselors and nutritionists, clinical diagnostic laboratory activities and research on the causes and inheritance of genetic disorders. Examples of conditions that are within the scope of medical genetics include birth defects and dysmorphology, mental retardation, autism, mitochondrial disorders, skeletal dysplasia, connective tissue disorders, cancer genetics, teratogens and prenatal diagnosis. Medical genetics is becoming increasingly relevant for many common diseases. Overlaps with other medical specialties are beginning to emerge, as recent advances in genetics are revealing etiologies for neurological, endocrine, cardiovascular, pulmonary, ophthalmological, renal, psychiatric and dermatological diseases. Summary of the contents of this book: Genetic disorders: Classification Chromosomal disorders Mitochondrial diseases: Mitochondrial genetics Proteopathy The human genome and the chromosomal base of inheritance Cancer cytogenetics The human genome and its chromosomes DNA structure: a brief summary Organization of human chromosomes Cell division The

70 mm, Bigger than life Gabriele Jatho,2009 For many cineastes, 70 mm is far more than just the designation of a film size. Its large-format images combine high resolution, sharp picture, and color quality with overwhelming sound quality. 70 mm represents a unique kind of harmony, a code signifying cinema's true potential: a singularly impressive experience for both the eye and the ear. This book is about the history and technical development of wide-gauge film. It contains an essay and glossary by Gert Koshofer, a comprehensive list of 70 mm film titles (with commentaries in some cases) covering productions from the USA, the USSR, and Europe. There is also a data section, with detailed filmographic information and contemporary film criticism, documenting all the films in the Retrospective "70 mm – Bigger than Life."

Implementing Functional Languages Simon L. Peyton Jones,David R. Lester,1992 Software -- Programming Languages.

XXXXX Xxxxx,Martin Howse,2006 xxxxx proposes a radical, new space for artistic exploration, with essential contributions from a diverse range of artists, theorists, and scientists. Combining intense background material, code listings, screenshots, new translation, [the] xxxxx [reader] functions as both guide and manifesto for a thought movement which is radically opposed to entropic contemporary economies. xxxxx traces a clear line across eccentric and wide ranging texts under the rubric of life coding which can well be contrasted with the death drive of cynical economy with roots in rationalism and enlightenment thought. Such philosophy, world as machine, informs its own deadly flipside embedded within language and technology. xxxxx totally unpicks this hiroshimic engraving, offering an dandyish alternative by way of deep examination of software and substance. Life coding is primarily active, subsuming deprecated psychogeography in favour of acute wonderland technology, wary of any assumed transparency. Texts such as Endonomadology, a text from celebrated biochemist and chaos theory pioneer Otto E. Roessler, who features heavily throughout this intense volume, make plain the sadistic nature and active legacy of rationalist thought. At the same time, through the science of endophysics, a physics from the inside elaborated here, a delicate theory of the world as interface is proposed. xxxxx is very much concerned with the joyful elaboration of a new real; software-led propositions which are active and constructive in eviscerating contemporary economic culture. xxxxx embeds Perl Routines to Manipulate London, by way of software artist and Mongrel Graham Harwood, a Universal Dovetailer in the Lisp language from AI researcher Bruno Marchal rewriting the universe as code, and self explanatory Pornographic Coding from plagiarist and author Stewart Home and code art guru Florian Cramer. Software is treated as magical,

electromystical, contrasting with the tedious GUI desktop applications and user-led drudgery expressed within a vast ghost-authored literature which merely serves to rehearse again and again the demands of industry and economy. Key texts, which well explain the magic and sheer art of programming for the absolute beginner are published here. Software subjugation is made plain within the very title of media theorist Friedrich Kittler's essay Protected Mode, published in this volume. Media, technology and destruction are further elaborated across this work in texts such as War.pl, Media and Drugs in Pynchon's Second World War, again from Kittler, and Simon Ford's elegant take on J.G Ballard's crashed cars exhibition of 1970, A Psychopathic Hymn. Software and its expansion stand in obvious relation to language. Attacking transparency means examining the prison cell or virus of language; life coding as William Burrough's cutup. And perhaps the most substantial and thorough-going examination is put forward by daring Vienna actionist Oswald Wiener in his Notes on the Concept of the Bio-adapter which has been thankfully unearthed here. Equally, Olga Goriunova's extensive examination of a new Russian literary trend, the online male literature of udaff.com provides both a reexamination of culture and language, and an example of the diversity of xxxxx; a diversity well reflected in background texts ranging across subjects such as Leibniz' monadology, the ur-crash of supreme flaneur Thomas de Quincey and several rewritings of the forensic model of Jack the Ripper thanks to Stewart Home and Martin Howse. xxxxx liberates software from the machinic, and questions the transparency of language, proposing a new world view, a sheer electromysticism which is well explained with reference to the works of Thomas Pynchon in Friedrich Kittler's essay, translated for the first time into English, which closes xxxxx. The Ha-Ha Dave King, 2005-01-01 Howard Kapostash has not spoken in thirty years. The small repertory of gestures and simple sounds that he uses to communicate lead most people to assume he is disturbed. No one understands that Howard is still the same man he was before his tragic injury. But when he agrees to help an old girlfriend by opening his home to her nine-year-old son, the presence of this nervous, resourceful boy in his life transforms Howard utterly. He is afforded a rare glimpse of life outside his shell? With all its exuberant joys and crushing sorrows.
