Christianity and Market Regulation Daniel A. Crane,Samuel Gregg,2021-07-08 Historically, the Christian tradition has played an influential role in Western economic thought concerning the regulation of markets, but, with the fracturing of the Christian tradition following the Reformation, the decline of Christian influence in academia, and the increasing specialization of economic analysis, that influence has become increasingly opaque. This volume brings together an interdisciplinary team of prominent academic experts on market regulation from four different continents and various faith traditions to reconsider the impact of Christianity on market regulation. Drawing on law, economics, history, theology, philosophy, and political theory, the authors consider both general questions of market regulation and particular regulatory fields such as bankruptcy, corporate law, and antitrust from a Christian perspective.

Cases in International Relations Glenn Hastedt,Donna L. Lybecker,Vaughn P. Shannon,2014-03-01 Students love good stories. That is why case studies are such a powerful way to engage students while teaching them about concepts fundamental to the study of international relations. In *Cases in International Relations*, Glenn Hastedt, Vaughn P. Shannon, and Donna L. Lybecker help students understand the context of headline events in the international arena. Organized into three main parts—military, economic, and human security—the book's fifteen cases

examine enduring and emerging issues from the longstanding Arab-Israeli conflict to the rapidly changing field of cyber-security. Compatible with a variety of theoretical perspectives, the cases consider a dispute's origins, issue development, and resolution so that readers see the underlying dynamics of state behavior and can try their hand at applying theory.

Networks of Outrage and Hope Manuel Castells, 2015-06-04 Networks of Outrage and Hope is an exploration of the new forms of social movements and protests that are erupting in the world today, from the Arab uprisings to the indignadas movement in Spain, from the Occupy Wall Street movement to the social protests in Turkey, Brazil and elsewhere. While these and similar social movements differ in many important ways, there is one thing they share in common: they are all interwoven inextricably with the creation of autonomous communication networks supported by the Internet and wireless communication. In this new edition of his timely and important book, Manuel Castells examines the social, cultural and political roots of these new social movements, studies their innovative forms of self-organization, assesses the precise role of technology in the dynamics of the movements, suggests the reasons for the support they have found in large segments of society, and probes their capacity to induce political change by influencing people's minds. Two new chapters bring the analysis up-to-date and draw out the implications of these social movements and protests for understanding the new forms of social change and political democracy in the global network society.

Management of Legionella in Water Systems National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Division on Earth and Life Studies, Board on Population Health and Public Health Practice, Board on Life Sciences, Water Science and Technology

Board, Committee on Management of Legionella in Water Systems, 2020-02-20 Legionnaires' disease, a pneumonia caused by the Legionella bacterium, is the leading cause of reported waterborne disease outbreaks in the United States. Legionella occur naturally in water from many different environmental sources, but grow rapidly in the warm, stagnant conditions that can be found in engineered water systems such as cooling towers, building plumbing, and hot tubs. Humans are primarily exposed to Legionella through inhalation of contaminated aerosols into the respiratory system. Legionnaires' disease can be fatal, with between 3 and 33 percent of Legionella infections leading to death, and studies show the incidence of Legionnaires' disease in the United States increased five-fold from 2000 to 2017. Management of Legionella in Water Systems reviews the state of science on Legionella contamination of water systems, specifically the ecology and diagnosis. This report explores the process of transmission via water systems, quantification, prevention and control, and policy and training issues that affect the incidence of Legionnaires' disease. It also analyzes existing knowledge gaps and recommends research priorities moving forward.

Derelict London: All New Edition Paul Talling, 2019-07-11 _____ The huge word-of-mouth bestseller – completely updated for 2019 THE LONDON THAT TOURISTS DON'T SEE Look beyond Big Ben and past the skyscrapers of the Square Mile, and you will find another London. This is the land of long-forgotten tube stations, burnt-out mansions and gently decaying factories. Welcome to DERELICT LONDON: a realm whose secrets are all around us, visible to anyone who cares to look . . . Paul Talling – our best-loved investigator of London's underbelly – has spent over fifteen years uncovering the stories of this hidden world. Now, he brings together 100 of his favourite abandoned places from across the capital: many of them more magnificent, more beautiful and more evocative than you can imagine. Covering everything from the overgrown stands of Leyton Stadium to the windswept alleys of the Aylesbury Estate, DERELICT LONDON reveals a side of the city you never knew existed. It will change the way you see London. _____ PRAISE FOR THE DERELICT LONDON PROJECT 'Fascinating images showing some of London's eeriest derelict sites show another side to the busy, built-up capital.' Daily Mail 'Talling has managed to show another

side to the capital, one of abandoned buildings that somehow retain a sense of beauty.’ Metro
‘Excellent . . . As much as it is an inadvertent vision of how London might look after a catastrophe,
DERELICT LONDON is valuable as a document of the one going on right in front of us.’ New Statesman
‘From the iconic empty shell of Battersea Power Station to the buried ‘ghost’ stations of the London
Underground, the city is peppered with decaying buildings. Paul Talling knows these places better
than anyone in the capital.’ Daily Express ‘[London has an] unusual (and deplorable) number of
abandoned buildings. Paul Talling’s surprise bestseller, DERELICT LONDON, is their shabby Pevsner.’

Immunoepidemiology Peter J. Krause, Paula B. Kavathas, Nancy H. Ruddle, 2019-10-24 This textbook focuses on the nascent field of Immunoepidemiology that addresses how differences in immune responses among individuals affect the epidemiology of infectious diseases, cancer, hypersensitivity, and autoimmunity. The idea for the book originated from a course entitled “Immunology for Epidemiologists” at the Yale School of Public Health. While many fine textbooks are available that address the immunological responses of individuals to pathogens, these provided very little information regarding how immunological variation among populations affects the epidemiology of disease. And yet, it has long been recognized that there is great immunologic diversity among people, which can have a profound effect on the epidemiology of disease. Careful review of the immunologic and epidemiologic literature revealed that there have been relatively few publications concerning immunoepidemiology and that no textbook is available on the subject. This textbook therefore aims to fill this void by providing a much-needed tool to comprehensively and efficiently teach immunoepidemiology. The book includes a section on the basic principles of immunology, and then applies them to particular examples of disease in human populations. The target audience for

this text book are Masters of Public Health students. Others who should also find it of interest include PhD students in epidemiology, immunology, medical students, generalists, and specialists in immunology, infectious diseases, cancer, and rheumatology.

Enough Roger Thurow,2010 For more than thirty years, humankind has known how to grow enough food to end chronic hunger worldwide. Yet while the "Green Revolution" succeeded in South America and Asia, it never got to Africa. More than 9 million people every year die of hunger, malnutrition, and related diseases every year - most of them in Africa and most of them children. More die of hunger in Africa than from AIDS and malaria combined. Now, an impending global food crisis threatens to make things worse. In the west we think of famine as a natural disaster, brought about by drought; or as the legacy of brutal dictators. But in this powerful investigative narrative, Thurow & Kilman show exactly how, in the past few decades, American, British, and European policies conspired to keep Africa hungry and unable to feed itself. As a new generation of activists work to keep famine from spreading, *Enough* is essential reading on a humanitarian issue of utmost urgency.
