A Grammar of Qiang Randy J. LaPolla, Chenglong Huang, 2008-08-22 This book is a full reference grammar of Qiang, one of the minority languages of southwest China, spoken by about 70,000 Qiang and Tibetan people in Aba Tibetan and Qiang Autonomous Prefecture in northern Sichuan Province. It belongs to the Qiangic branch of Tibeto-Burman (one of the two major branches of Sino-Tibetan). The dialect presented in the book is the Northern Qiang variety spoken in Ronghong Village, Yadu Township, Chibusu District, Mao County. This book, the first book-length description of the Qiang language in English, is the result of many years of work on the language, and is as typologically comprehensive as possible. It includes not only the reference grammar, but also an ethnological overview, several fully analyzed texts (mostly traditional stories), and an annotated glossary. The language is verb final, agglutinative (prefixing and suffixing), and has both head-marking and dependent marking morphology. The phonology of Qiang is quite complex, with 39 consonants at seven points of articulation, plus complex consonant clusters, both in initial and final position, as well as vowel harmony, vowel length distinctions, and a set of retroflexed vowels. The grammar also is complex, with a paradigm of eight direction marking verbal prefixes, and two paradigms for person marking, one for actor, one for non-actor, and a variety of other verbal prefixes and suffixes, as well as definite and number marking on nouns. Noun phrases take classifiers and relational pospositions as well.

Assessment of Sea-Turtle Status and Trends National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Committee on the Review of Sea-Turtle Population Assessment Methods, 2010-10-07 All six species of sea turtles found in U.S. waters are listed as endangered or threatened, but the exact population sizes of these species are unknown due to a lack of key information regarding birth and survival rates. The U.S. Endangered Species Act prohibits the hunting of sea turtles and reduces incidental losses from activities such as shrimp trawling and development on beaches used for nesting. However, current monitoring does not provide enough information on sea turtle populations to evaluate the effectiveness of these protective measures. Sea Turtle Status and Trends reviews current methods for assessing sea turtle populations and finds that although counts of sea turtles are essential, more detailed information on sea turtle biology, such as survival rates and breeding patterns, is needed to predict and understand changes in populations in order to develop successful management and conservation plans.

Development as Freedom Amartya Sen, 2011-05-25 By the winner of the 1988 Nobel Prize in Economics, an essential and paradigm-altering framework for understanding economic development--for both rich and poor--in the twenty-first century. Freedom, Sen argues, is both the end and most efficient means of sustaining economic life and the key to securing the general welfare of the world's entire population. Releasing the idea of individual freedom from association with any particular historical, intellectual, political, or religious tradition, Sen clearly demonstrates its current applicability and possibilities. In the new global economy, where, despite unprecedented increases in overall opulence, the contemporary world

denies elementary freedoms to vast numbers--perhaps even the majority of people--he concludes, it is still possible to practically and optimistically restrain a sense of social accountability. Development as Freedom is essential reading.
