**Dyadic Data Analysis** David A. Kenny, Deborah A. Kashy, William L. Cook, 2020-11-26 Interpersonal phenomena such as attachment, conflict, person perception, learning, and influence have traditionally been studied by examining individuals in isolation, which falls short of capturing their truly interpersonal nature. This book offers state-of-the-art solutions to this age-old problem by presenting methodological and data-analytic approaches useful in investigating processes that take place among dyads: couples, coworkers, parent and child, teacher and student, or doctor and patient, to name just a few. Rich examples from psychology and across the behavioral and social sciences help build the researcher's ability to conceptualize relationship processes; model and test for actor effects, partner effects, and relationship effects; and model and control for the statistical interdependence that can exist between partners. The companion website provides clarifications, elaborations, corrections, and data and files for each chapter.

**Fuzzy Cognitive Maps and Neutrosophic Cognitive Maps** W. B. Vasantha Kandasamy, Florentin Smarandache, 2003-01-01 In a world of chaotic alignments, traditional logic with its strict boundaries of truth and falsity has not imbued itself with the capability of reflecting the reality. Despite various attempts to reorient logic, there has remained an essential need for an alternative system that could infuse into itself a representation of the real world. Out of this need arose the system of Neutrosophy (the philosophy of neutralities, introduced by FLORENTIN SMARANDACHE), and its connected logic Neutrosophic Logic, which is a further generalization of the theory of Fuzzy Logic. In this book we study the concepts of Fuzzy Cognitive Maps (FCMs) and their Neutrosophic analogue, the Neutrosophic Cognitive Maps (NCMs). Fuzzy Cognitive Maps are fuzzy structures that strongly resemble neural networks, and they have powerful and far-reaching consequences as a mathematical tool for modeling complex systems. Neutrosophic Cognitive Maps are generalizations of FCMs, and their unique feature is the ability to handle indeterminacy in relations between two concepts thereby bringing greater sensitivity into the results. Some of the varied applications of FCMs and NCMs which has been explained by us, in this book, include: modeling of supervisory systems; design of hybrid models for complex systems; mobile robots and in intimate technology such as office plants; analysis of business performance assessment; formalism debate and legal rules; creating metabolic and regulatory network models; traffic and transportation problems; medical diagnostics; simulation of strategic planning process in intelligent systems; specific language impairment; web-mining inference application; child labor problem; industrial relations: between employer and employee, maximizing production and profit; decision support in intelligent intrusion detection system; hyper-knowledge representation in strategy formation; female infanticide; depression in terminally ill patients and finally, in the theory of community mobilization and women empowerment relative to the AIDS epidemic.

**Guidelines for the management of symptomatic sexually transmitted infections** World Health Organization, 2021-07-15 The WHO global health sector strategy on sexually transmitted infections, 2016–2021, endorsed by the World Health Assembly in 2016, aims to eliminate STIs as a public health threat by 2030. In 2019, WHO published estimates of new cases of chlamydia, gonorrhoea, syphilis and trichomoniasis. Recent changes in the epidemiology of STIs and progress in prevention, diagnosis and treatment of STIs and HIV have necessitated changes in approaches to STI prevention and management. To address these STIs, the most widely used approach in clinical settings is the syndromic management of STIs. In most resource-limited settings, the syndromic management flow charts are still the standard of care where laboratory diagnosis is not available or is hard to access. The objectives of these guidelines are to provide updated, evidence-informed clinical and practical recommendations on the case management of

people with symptoms of STIs; and to support countries in updating their national guidelines for the case management of people with symptoms of STIs. These guidelines include the management of symptomatic infections related to urethral discharge syndrome, including persistent urethral discharge syndrome; vaginal discharge syndrome, including persistent vaginal discharge; anorectal infection; genital ulcer disease syndrome; and lower abdominal pain syndrome. These guidelines are intended for programme managers for STI prevention and control at the national level and the health-care providers at the frontline – primary, secondary and tertiary health care.

**Flying the B-26 Marauder Over Europe** Carl H. Moore, 2013-05-21 “This is the story of my experiences with the medium bomber designated by the Army as a B-26 and named by the British the Marauder. The book includes a history of the development of the plane. My war experience began with ferrying our Marauder to England, which included a Sahara Desert stretch from Dakar to Marrakesh. Less than a third of the way there we lost the right engine but flew on safely on one engine, making an emergency landing at the oasis village of Tindouf, an old French Foreign Legion base. The Marauders were involved in the tragic, low-level mission over the E-boat pens in Holland where 60 percent of the officers and airmen and all ten aircraft were lost. This mission resulted in a reconsideration of low level operations in Europe (decision: move to medium altitude). My journal entries were created after each mission and offer details (target, date, crew members, their emotions, action narrative) of 50 combat missions (Appendix A). Considerable background on the design and construction of the Marauder is included, as well as a description of the B-26 reconstructed by the Confederate (now: Commemorative) Air Force. The book ends with a description of each of the crew members and their activity since the war if available.”

Biophysics of the Failing Heart R. John Solaro, Jil C. Tardiff, 2013-08-13 Subjects in the monograph “Biophysics of the Failing Heart” include state of the art chapters considering major biophysical mechanisms for why hearts responding to acquired or inherited stressors enter into maladaptive processes eventually leading to an inability of the heart to respond efficiently to hemodynamic loads especially during exercise. The chapters describe biophysical techniques that have been applied to determine the triggers for the heart failure process as well as the mechanisms for sustaining the disorders. These techniques include measurements of active and passive mechanical properties and hemodynamics at levels of organization ranging from molecules to hearts beating in situ. Biophysical concepts and approaches are also applied to determination of signaling and signal transduction, energetics, ionic currents, transport processes, electro-chemical and chemo-mechanical coupling. By its emphasis on biophysical aspects of a prevalent clinical condition, the monograph is unique in its perspective and focus. The breadth of information in the chapters all in one place will be of value to clinicians and researchers at all levels. Modern research approaches and clinical understanding of heart failure demands integration of multiple aspects of the disorders. In most cases, combinations of clinician scientists and researchers author the chapters. A main benefit of the book is couched in its didactic approach together with its emphasis on how biophysical concepts and techniques aid in diagnosis and development of new therapies.

Unorthodox Lawmaking Barbara Sinclair, 2016-06-22 Most major measures wind their way through the

contemporary Congress in what Barbara Sinclair has dubbed “unorthodox lawmaking.” In this much-anticipated Fifth Edition of *Unorthodox Lawmaking*, Sinclair explores the full range of special procedures and processes that make up Congress’s work, as well as the reasons these unconventional routes evolved. The author introduces students to the intricacies of Congress and provides the tools to assess the relative successes and limitations of the institution. This dramatically updated revision incorporates a wealth of new cases and examples to illustrate the changes occurring in congressional process. Two entirely new case study chapters—on the 2013 government shutdown and the 2015 reauthorization of the Patriot Act—highlight Sinclair’s fresh analysis and the book is now introduced by a new foreword from noted scholar and teacher, Bruce I. Oppenheimer, reflecting on this book and Barbara Sinclair’s significant mark on the study of Congress.

*Plastics from Bacteria* George Guo-Qiang Chen, 2009-12-02 Due to the possibility that petroleum supplies will be exhausted in the next decades to come, more and more attention has been paid to the production of bacterial plastics including polyhydroxyalkanoates (PHA), polylactic acid (PLA), poly(butylene succinate) (PBS), biopolyethylene (PE), poly(trimethylene terephthalate) (PTT), and poly(p-phenylene) (PPP). These are well-studied polymers containing at least one monomer synthesized via bacterial transformation. Among them, PHA, PLA and PBS are well known for their biodegradability, whereas PE, PTT and PPP are probably less biodegradable or are less studied in terms of their biodegradability. Over the past years, their properties and applications have been studied in detail and products have been developed. Physical and chemical modifications to reduce their cost or to improve their properties have been conducted. PHA is the only biopolyester family completely synthesized by biological means. They have been investigated by microbiologists, molecular biologists, biochemists, chemical engineers, chemists, polymer experts, and medical researchers for many years. PHA applications as bioplastics, fine chemicals, implant biomaterials, medicines, and biofuels have been developed. Companies have been established for or involved in PHA related R&D as well as large scale production. It has become clear that PHA and its related technologies form an industrial value chain in fermentation, materials, feeds, and energy to medical fields.

Essentials of Interventional Cancer Pain Management Amitabh Gulati, Vinay Puttanniah, Brian M. Bruel, William S. Rosenberg, Joseph C. Hung, 2018-12-28 This text provides a comprehensive review and expertise on various interventional cancer pain procedures. The first part of the text addresses the lack of consistency seen in the literature regarding interventional treatment options for specific cancer pain syndromes. Initially, it discusses primary cancer and treatment-related cancer pain syndromes that physicians may encounter when managing cancer patients. The implementation of paradigms that can be used in treating specific groups of cancer such as breast cancer, follows. The remainder of the text delves into a more common approach to addressing interventional cancer pain medicine. After discussing interventional options that are commonly employed by physicians, the text investigates how surgeons may address some of the more severe pain syndromes, and covers the most important interventional available for our patients, intrathecal drug delivery. Chapters also cover radiologic options in targeted neurolysis and ablative techniques, specifically for bone metastasis, rehabilitation to address patients’ quality of life and function, and integrative and psychological therapies. *Essentials of Interventional Cancer Pain Management* globally assesses and addresses patients’ needs throughout the cancer journey. Written by experts in the field, and packed with copious tables, figures, and flow charts, this book is a must-have for pain physicians, residents, and fellows.

**The Global Technology Revolution** Philip S. Anton, Richard Silberglitt, James Schneider, 2001-05-04 Beyond the agricultural and industrial revolutions of the past, a global technology revolution is currently

changing the world. This book discusses the broad, multidisciplinary, and synergistic trends in this revolution, including genomics, cloning, biomedical engineering, smart materials, agile manufacturing, nanofabricated computation devices, and integrated microsystems. The revolution's effects on human health may be the most startling as breakthroughs improve both the quality and length of human life. Biotechnology will also enable us to identify, understand, manipulate, improve, and control living organisms (including ourselves). Information technology is already revolutionizing our lives, especially in the developed world, and is a major enabler of other trends. Materials technology will produce products, components, and systems that are smaller, smarter, multi-functional, environmentally compatible, more survivable, and customizable. In addition, smart materials, agile manufacturing, and nanotechnology will change the way we produce devices and improve their capabilities. The technology revolution will not be uniform in its effect across the globe but will play out differently depending on its acceptance, investment, and a variety of issues such as bioethics, privacy, economic disparity, cultural invasion, and social reactions. There will be no turning back, however, since some societies will avail themselves of the revolution, and globalization will thus change the environment in which each society lives.

**Community Psychology** John Moritsugu, Elizabeth Vera, Frank Y Wong, Karen Grover Duffy, 2015-07-22 Community Psychology, 5/e focuses on the prevention of problems, the promotion of well-being, empowerment of members within a community, the appreciation of diversity, and an ecological model for the understanding of human behavior. Attention is paid to both “classic” early writings and the most recent journal articles and reviews by today’s practitioners and researchers. Historical and alternative methods of effecting social change are explored in this book, with the overall theme that the environment is as important as the individual in it. This text is available in a variety of formats – digital and print. Learning Goals Upon completing this book, readers will be able to: Understand the historical and contemporary principles of community psychology. Apply theory and research to social services, mental health, health, legal, and public health systems

Above Politics Gary J. Miller, Andrew B. Whitford, 2016-05-26 This book argues that bureaucracies can contribute to stability and economic development, if they are insulated from unstable democratic politics. The book will appeal to those interested in political science, economics, law, sociology, and modern political history.

*Role of Federal Military Forces in Domestic Disorders, 1945-1992 (Cloth)* Paul J. Scheips, 2005 This volume, covering 1945 to 1992, is the third of three volumes on the role of federal military forces in domestic disorders. Summarizing institutional and other changes that took place in the Army and in American society during this period, it carries the reader through the nation's use of federal troops during the civil rights movement of the 1950s and 1960s and the domestic upheavals of the 1960s and 1970s associated with the Vietnam War. The development and refinement of the Army's domestic support role, as well as the disciplined manner in which the Army conducted these complex and often unpopular tasks, are major themes of this volume. In addition, the study demonstrates the Army's progress in coordinating its operational and contingency planning with the activities of other federal agencies and the National Guard. --from the Foreword.

**Merchants of Doubt** Naomi Oreskes, Erik M. Conway, 2011-10-03 The U.S. scientific community has long led the world in research on such areas as public health, environmental science, and issues affecting quality of life. These scientists have produced landmark studies on the dangers of DDT, tobacco smoke, acid rain, and global warming. But at the same time, a small yet potent subset of this community leads the world in vehement denial of these dangers. *Merchants of Doubt* tells the story of how a loose-knit group of high-level scientists and scientific advisers, with deep connections in politics and industry, ran effective campaigns to mislead the public and deny well-established scientific knowledge over four decades. Remarkably, the same individuals surface repeatedly—some of the same figures who have claimed that the science of global warming is not settled denied the truth of studies linking smoking to lung cancer, coal smoke to acid rain, and CFCs to the ozone hole. Doubt is our product, wrote one tobacco executive. These experts supplied it. Naomi Oreskes and Erik M. Conway, historians of science, roll back the rug on this dark corner of the American scientific community, showing how ideology and corporate interests, aided by a too-compliant media, have skewed public understanding of some of the most pressing issues of our era.
