**The Interoceptive Mind** Manos Tsakiris, Helena De Preester, 2018-10-11 Interoception is the body-to-brain axis of sensations that originates from the internal body and visceral organs. It plays a unique role in ensuring homeostasis, allowing human beings to experience and perceive the state of their bodies at any one time. However, interoception is rapidly gaining interest amongst those studying the human mind. It is believed that beyond homeostasis interoception is fundamental in understanding human emotion and motivation and their impact upon behavior. That link between interoception and self-awareness is supported by a growing body of experimental findings. The Interoceptive Mind: From Homeostasis to Awareness offers a state-of-the-art overview of, and insights into, the role of interoception for mental life, awareness, subjectivity, affect, and cognition. Structured across three parts, this multidisciplinary volume highlights the role that interoceptive signals, and our awareness of them, play in our mental life. It considers deficits in interoceptive processing and awareness in various mental health conditions. But it also considers the equally important role of interoception for well-being, approaching interoception from both a theoretical and a philosophical perspective. Written by leading experts in their fields, all chapters within this volume share a common concern for what it means to experience oneself, for the crucial role of emotions, and for issues of health and wellbeing. Each of those concerns is discussed on the joint basis of our bodily existence and interoception. The research presented here will undoubtedly accelerate the much-anticipated coming of age of interoceptive research in psychology, cognitive neurosciences and philosophy, making this vital reading for anyone working in those fields.

**Biophysical Techniques in Photosynthesis** Thijs Aartsma, Jörg Matysik, 2010-11-23 Since the first volume on Biophysical Techniques in Photosynthesis Research, published in 1996, new experimental techniques and methods have been devised at a rapid pace. The present book is a sequel which complements the publication of the first volume by providing a comprehensive overview of the most important new techniques developed over the past ten years, especially those that are relevant for research on the mechanism and fundamental aspects of photosynthesis.

**The Dynamics of Biological Systems** Arianna Bianchi, Thomas Hillen, Mark A. Lewis, Yingfei Yi, 2019-10-02 The book presents nine mini-courses from a summer school, Dynamics of Biological Systems, held at the University of Alberta in 2016, as part of the prestigious seminar series: Séminaire de Mathématiques Supérieures (SMS). It includes new and significant contributions in the field of Dynamical Systems and their applications in Biology, Ecology, and Medicine. The chapters of this book cover a wide range of mathematical methods and biological applications. They - explain the process of mathematical modelling of biological systems with many examples, - introduce advanced methods from dynamical systems theory, - present many examples of the use of mathematical modelling to gain biological insight - discuss innovative methods for the analysis of biological processes, - contain extensive lists of references, which allow interested readers to continue the research on their own. Integrating the theory of dynamical systems with biological modelling, the book will appeal to researchers and graduate students in Applied Mathematics and Life Sciences.

**Enzyme Kinetics and Mechanism, Part F: Detection and Characterization of Enzyme Reaction Intermediates** Daniel L. Purich, 2002-10-21 The critically acclaimed laboratory standard for more than forty years, Methods in Enzymology is one of the most highly respected publications in the field of biochemistry. Since 1955, each volume has been eagerly awaited, frequently consulted, and praised by researchers and reviewers alike. Now with more than 300 volumes (all of them still in print), the series contains much

material still relevant today-truly an essential publication for researchers in all fields of life sciences.

**Innovation for Systems Information and Decision** Adiel Teixeira de Almeida,Danielle Costa

Morais,2021-11-24 This book constitutes the refereed proceedings of the Third International Meeting on Innovation for Systems Information and Decision, INSID 2021, which was held during December 1-3, 2021. The conference was initially planned to take place in Recife, Brazil, but changed to a virtual meeting due to the COVID-19 pandemic. The 9 full papers presented in this volume were carefully reviewed and selected from a total of 76 submissions. They reflect methodological improvements and advances in multi-criteria decision-making/multi-criteria decision-aid (MCDM/MCDA) oriented toward real-world applications, which contribute to the understanding of relevant developments of current research on and future trends of innovation for systems information and decision.

*Integer Programming* Laurence A. Wolsey,2020-10-20 A PRACTICAL GUIDE TO OPTIMIZATION PROBLEMS WITH DISCRETE OR INTEGER VARIABLES, REVISED AND UPDATED The revised second edition of Integer Programming explains in clear and simple terms how to construct custom-made algorithms or use existing commercial software to obtain optimal or near-optimal solutions for a variety of real-world problems. The second edition also includes information on the remarkable progress in the development of mixed integer programming solvers in the 22 years since the first edition of the book appeared. The updated text includes information on the most recent developments in the field such as the much improved preprocessing/presolving and the many new ideas for primal heuristics included in the solvers. The result has been a speed-up of several orders of magnitude. The other major change reflected in the text is the widespread use of decomposition algorithms, in particular column generation (branch-(cut)-and-price) and Benders' decomposition. The revised second edition: Contains new developments on column generation Offers a new chapter on Benders' algorithm Includes expanded information on preprocessing, heuristics, and branch-and-cut Presents several basic and extended formulations, for example for fixed cost network flows Also touches on and briefly introduces topics such as non-bipartite matching, the complexity of extended formulations or a good linear program for the implementation of lift-and-project Written for students of integer/mathematical programming in operations research, mathematics, engineering, or computer science, Integer Programming offers an updated edition of the basic text that reflects the most recent developments in the field.

**Methods in Protein Structure and Stability Analysis: Conformational stability, size, shape, and surface of protein molecules** Vladimir N. Uversky,2007 Protein research is a frontier field in science. Proteins are widely distributed in plants and animals and are the principal constituents of the protoplasm of all cells, and consist essentially of combinations of a-amino acids in peptide linkages. Twenty different amino acids are commonly found in proteins, and serve as enzymes, structural elements, hormones, immunoglobulins, etc., and are involved throughout the body, and in photosynthesis. This book gathers new leading-edge research from throughout the world in this exciting and exploding field of research.
