Vikram and the Vampire Sir Richard Francis Burton, 1893

Art Crime in Context Naomi Oosterman, Donna Yates, 2022-11-23 This book brings together empirical and theoretical case-study research on art and heritage crime. Drawn from a diverse group of researchers and professionals, the work presented explores contemporary conceptualisations of art crime within broader contexts. In this volume, we see 'art' in its usual forms for art crime scholarship: in paintings and antiquities. However, we also see art in fossils and in violins, chairs and jewellery, holes in the ground and even in the institutions meant to protect any, or all, of the above. And where there is art, there is crime. Chapters in this volume, alternatively, zoom in on specific objects, on specific locations, and on specific institutions, considering how each interact with the various conceptions of crime that exist in those contexts. This volume challenges the boundaries of what we understand as "art and heritage crimes" and displays that both art, and criminality related to art, is creative and unpredictable.

Efficient Learning Machines Mariette Awad, Rahul Khanna, 2015-04-27 Machine learning techniques provide cost-effective alternatives to traditional methods for extracting underlying relationships between information and data and for predicting future events by processing existing information to train models. *Efficient Learning Machines* explores the major topics of machine learning, including knowledge discovery, classifications, genetic algorithms, neural networking, kernel methods, and biologically-inspired techniques. Mariette Awad and Rahul Khanna's synthetic approach weaves together the theoretical exposition, design principles, and practical applications of

efficient machine learning. Their experiential emphasis, expressed in their close analysis of sample algorithms throughout the book, aims to equip engineers, students of engineering, and system designers to design and create new and more efficient machine learning systems. Readers of *Efficient Learning Machines* will learn how to recognize and analyze the problems that machine learning technology can solve for them, how to implement and deploy standard solutions to sample problems, and how to design new systems and solutions. Advances in computing performance, storage, memory, unstructured information retrieval, and cloud computing have coevolved with a new generation of machine learning paradigms and big data analytics, which the authors present in the conceptual context of their traditional precursors. Awad and Khanna explore current developments in the deep learning techniques of deep neural networks, hierarchical temporal memory, and cortical algorithms. Nature suggests sophisticated learning techniques that deploy simple rules to generate highly intelligent and organized behaviors with adaptive, evolutionary, and distributed properties. The authors examine the most popular biologically-inspired algorithms, together with a sample application to distributed datacenter management. They also discuss machine learning techniques for addressing problems of multi-objective optimization in which solutions in real-world systems are constrained and evaluated based on how well they perform with respect to multiple objectives in aggregate. Two chapters on support vector machines and their extensions focus on recent improvements to the classification and regression techniques at the core of machine learning.

Radiología pediátrica en urgencias Robert Vezzetti, Justin Carlson, Debra Pennington, 2022-09-15 Obra que recoge las principales prácticas y recomendaciones para la correcta utilización de la radiografía en niños, proporcionando la información necesaria para evitar posibles excesos de radiación ionizante en los pacientes pediátricos, uno de los riesgos principales de esta técnica de imagen. En este título se insta a los clínicos a adherirse a criterios de las guías ALARA (As low as reasonably Achievable) (tan bajo como razonablemente sea posible, en relación a la radiación ionizante) En un formato basado en casos clínicos que recoge numerosas modalidades de imagen utilizadas para el diagnóstico, valoración y tratamiento del paciente pediátrico que se atiende en los servicios de urgencias. Cada uno de los apartados incluye un apartado de discusión que resulta de gran ayuda para la toma de decisiones. Obra dirigida a residentes de Diagnóstico por imagen y especialistas en formación para los ciclos de totación, al igual que se convierte en una herramienta de base para las sesiones clínicas de residentes. Obra que recoge las principales prácticas y recomendaciones para la correcta aplicación de técnicas radiológicas en población pediátrica. Proporciona la información necesaria para que los especialistas puedan hacer un control exhaustivo de la radiación ionizante y evitar así los posibles excesos en este sentido y, por tanto, minimizar los riesgos asociados a estas técnicas de imagen. Evidence-Based Emergency Imaging Aine Kelly, Paul Cronin, Stefan Puig, Kimberly E. Applegate, 2019-01-15 This book presents evidence-based criteria to systematically

assess the appropriate use of medical imaging in the emergency department and other acute care settings. Over the last decade, there have been profound changes in the diagnostic testing and work-up of patients presenting to the emergency department with emergent symptoms. One of the most far-reaching changes has been the increased availability, speed, and accuracy of imaging due, in part, to technical improvements in imaging modalities such as CT, MR, and PET. Although the use of high-end imaging has plateaued in general, increased utilization continues in the ED. These patients are more acutely ill and there is additional pressure to make an accurate diagnosis as quickly as possible to facilitate prompt disposition or treatment. There is also strong evidence for the beneficial use of imaging in the emergency setting that results in improved patient outcomes. This book answers that need by providing protocols and guidelines for neuroradiological, cardiothoracic, abdominal and pelvic, musculoskeletal, and pediatric imaging are reviewed in terms of the available imaging modalities, diagnostic criteria, and treatment options. Distinguished by its unique focus on evidence-based emergency imaging in adults, children, and special populations, this book is a unique resource for radiologists, emergency medicine physicians, and physicians in other specialties who need to be informed about the most appropriate uses of diagnostic imaging in the emergency care setting.

The Art and Architecture of Islam 1250-1800 Sheila S. Blair,Jonathan M.

Bloom,1996-09-25 They discuss, for example, how the universal caliphs of the first six centuries gave way to regional rulers and how, in this new world order, Iranian forms, techniques, and motifs played a dominant role in the artistic life of most of the Muslim world; the one exception was the Maghrib, an area protected from the full brunt of the Mongol invasions, where traditional models continued to inspire artists and patrons. By the sixteenth century, say the authors, the eastern Mediterranean under the Ottomans and the area of northern India under the Mughals had become more powerful, and the Iranian models of early Ottoman and Mughal art gradually gave way to distinct regional and imperial styles.
