*Lethal But Legal* Nicholas Freudenberg,2014-04 Examines the links between unhealthy consumer products, business-influenced politics, and the challenges of disease, arguing that commercial interests have a greater impact on health care than scientists and policymakers.

**Relativistic Fluid Dynamics in and out of Equilibrium** Paul Romatschke,Ulrike Romatschke,2019-05-09 Presents a powerful new framework for out-of-equilibrium hydrodynamics, with connections to kinetic theory, AdS/CFT and applications to high-energy particle collisions.

Internet Governance in Transition Daniel J. Paré,2003 All Internet users will find this book a useful tool for understanding the increasingly complex web of Internet control.

Mobile Communication James E. Katz,2017-07-28 In the few short decades since their commercial deployment, 5 billion people—about three-quarters of all humanity, including children—have become mobile phone users. No technology has even approached the mobile phone's wildfire success. Effects of this success are apparent everywhere, ranging from accident scenes and earthquake rescue efforts to demeanor in the classroom and at dinner tables. No one interested in the next generation of issues provoked by the mobile communication revolution will want to miss this important new collection of essays. The mobile phone has given near-transcendent power to ordinary people. All aspects of social life have been touched by mobile technology. An ever-growing host of tracking, immersion, gaming, and commercial applications are becoming available. The community of mobile communication scholars has blossomed from a handful of pioneers a decade ago to a large and dynamic intellectual community that spans the globe. Area researchers have gained much insight into cultural, symbolic, and social interaction aspects of mobile communication as well as its relevance to commerce. To address the social policy dimension of the mobile communication revolution, this volume presents analyses by leading thinkers in the field. The volume offers novel and keen insights into the topic. Subjects include the role of mobiles in policy formation and evaluation in several areas including the mobile-digital divide and political campaigns. Also explored are processes and policy implications of mobiles in creating or alleviating social problems including social isolation and family dispersion. Other chapters analyze social policies for mobile devices, including attempts to regulate the use of the technology and to understand and moderate its potential harm to human health. The contributors' scope ranges across five continents and they address concerns at local, national, and international levels.

Cosmic Plasmas and Electromagnetic Phenomena Athina Meli,Yosuke Mizuno,Jose L. Gómez,2019-10-25 During the past few decades, plasma science has witnessed a great growth in laboratory studies, in simulations, and in space. Plasma is the most common phase of ordinary matter in the universe. It is a state in which ionized matter (even as low as 1%) becomes highly electrically conductive. As such, long-range electric and magnetic fields dominate its behavior. Cosmic plasmas are mostly associated with stars, supernovae, pulsars and neutron stars, quasars and active galaxies at the vicinities of black holes (i.e., their jets and accretion disks). Cosmic plasma phenomena can be studied with different methods, such as laboratory experiments, astrophysical observations, and theoretical/computational approaches (i.e., MHD, particle-in-cell simulations, etc.). They exhibit a multitude of complex magnetohydrodynamic behaviors, acceleration, radiation, turbulence, and various instability phenomena. This Special Issue addresses the growing need of the plasma science principles in astrophysics and presents our current understanding of the physics of astrophysical plasmas, their electromagnetic behaviors and properties (e.g., shocks, waves, turbulence, instabilities, collimation, acceleration and radiation), both microscopically and macroscopically. This Special Issue provides a series of state-of-the-art reviews from international experts in the field of cosmic plasmas and electromagnetic phenomena using theoretical approaches, astrophysical observations, laboratory experiments, and state-of-the-art simulation studies.

**Pacific Symposium on Biocomputing 2007** Russ Altman,2006 The Pacific Symposium on Biocomputing (PSB) 2007 is an international, multidisciplinary conference for the presentation and discussion of current research in the theory and application of computational methods in problems of biological significance. Presentations are rigorously peer reviewed and are published in an archival proceedings volume. PSB 2007 will be held January 30Co7, 2007 at the Grand Wailea, Maui. Tutorials will be offered prior to the start of the conference. PSB 2007 will bring together top researchers from the US, the Asian Pacific nations, and around the world to exchange research results and address open issues in all aspects of computational biology. It is a forum for the presentation of work in databases, algorithms, interfaces, visualization, modeling, and other computational methods, as applied to biological problems, with emphasis on applications in data-rich areas of molecular biology. The PSB has been designed to be responsive to the need for critical mass in sub-disciplines within biocomputing. For that reason, it is the only meeting whose sessions are defined dynamically each year in response to specific proposals. PSB sessions are organized by leaders of research in biocomputing's OC hot topics.OC0 In this way, the meeting provides an early forum for serious examination of emerging methods and approaches in this rapidly changing field. Sample Chapter(s). Chapter 1: Protein Interactions and Disease (106 KB). Contents: Protein Interactions and Disease; Computational Approaches to Metabolomics; New Frontiers in Biomedical Text Mining; Biodiversity Informatics: Managing Knowledge Beyond Humans and Model Organisms; Computational Proteomics: High-Throughput Analysis for Systems Biology; DNA-Protein Interactions: Integrating Structure, Sequence, and Function. Readership: Academia and industry in the fields of biocomputing, bioinformatics and computational biology.

**Robotics, Vision and Control** Peter Corke,2011-09-05 The author has maintained two open-source MATLAB Toolboxes for more than 10 years: one for robotics and one for vision. The key strength of the Toolboxes provide a set of tools that allow the user to work with real problems, not trivial examples. For the student the book makes the algorithms accessible, the Toolbox code can be read to gain understanding, and the examples illustrate how it can be used –instant gratification in just a couple of lines of MATLAB code. The code can also be the starting point for new work, for researchers or students, by writing programs based on Toolbox functions, or modifying the Toolbox code itself. The purpose of this book is to expand on the tutorial material provided with the toolboxes, add many more examples, and to weave this into a narrative that covers robotics and computer vision separately and together. The author shows how complex problems can be decomposed and solved using just

a few simple lines of code, and hopefully to inspire up and coming researchers. The topics covered are guided by the real problems observed over many years as a practitioner of both robotics and computer vision. It is written in a light but informative style, it is easy to read and absorb, and includes a lot of Matlab examples and figures. The book is a real walk through the fundamentals of robot kinematics, dynamics and joint level control, then camera models, image processing, feature extraction and epipolar geometry, and bring it all together in a visual servo system. **Radiation Tolerant Electronics** Paul Leroux,2019-08-26 Research on radiation-tolerant electronics has increased rapidly over the past few years, resulting in many interesting approaches to modeling radiation effects and designing radiation-hardened integrated circuits and embedded systems. This research is strongly driven by the growing need for radiation-hardened electronics for space applications, high-energy physics experiments such as those on the Large Hadron Collider at CERN, and many terrestrial nuclear applications including nuclear energy and nuclear safety. With the progressive scaling of integrated circuit technologies and the growing complexity of electronic systems, their susceptibility to ionizing radiation has raised many exciting challenges, which are expected to drive research in the coming decade. In this book we highlight recent breakthroughs in the study of radiation effects in advanced semiconductor devices, as well as in high-performance analog, mixed signal, RF, and digital integrated circuits. We also focus on advances in embedded radiation hardening in both FPGA and microcontroller systems and apply radiation-hardened embedded systems for cryptography and image processing, targeting space applications.

Circulating Fluidized Bed Boilers Prabir Basu,2015-04-07 · Explains operation and scientific fundamentals of circulating fluidized bed (CFB) boilers · Outlines practical issues in industrial use · Teaches how to optimize design for maximum reliability and efficiency · Discusses operating and maintenance issues and how to troubleshoot them This book provides practicing engineers and students with insight into the design and operation of circulating fluidized bed (CFB) boilers through a combination of theoretical concepts and practical experience. An emphasis on combustion, hydrodynamics, heat transfer, and material issues illustrates these concepts with numerous examples from actual operating plants. The relevance of design and feed-stock parameters to the operation of a CFB boiler are also examined, along with their impacts on designs of mechanical components, including cyclones, air distributor grids, and solid recycle systems. This versatile resource explains how fluidized bed equipment works and how the basic principles of thermodynamics and fluid mechanics influence design, while providing insight into planning new projects, troubleshooting existing equipment, and appreciating the capabilities and limitations of the process. From hydrodynamics to construction and maintenance, the author covers all of the essential information needed to understand, design, operate, and maintain a complete fluidized bed system. It is a must for clean coal technology as well as for biomass power generation.

**Marisol and Warhol Take New York** ,2021-10-05 A tale of two Pop artists in 1960s New York This book charts the emergence of Marisol Escobar (1930-2016) and Andy Warhol (1928-87) in New York during the dawn of Pop art in the early 1960s. Through essays, interviews and prose, the book explores the artists' parallel rise to success, the formation of their artistic personas, their savvy navigation of gallery relationships and the blossoming of their early artistic practices from 1960 to 1968. The exhibition features key loans of Marisol's work from major global collections, along with iconic works and rarely seen films and archival materials from the Andy Warhol Museum's collection. By situating Marisol's work in dialogue with Warhol's, this new collection of writing seeks to reclaim the importance of her art; reframe the strength, originality and daring nature of her work; and reconsider her as one of the leading figures of the Pop era.

Cosmic Rays in the Earth's Atmosphere and Underground Lev Dorman,2013-03-19 The present monograph as well as the next one (Dorman, M2005) is a result of more than 50 years working in cosmic ray (CR) research. After graduation in December 1950 Moscow Lomonosov State University (Nuclear and Elementary Particle Physics Division, the Team of Theoretical Physics), my supervisor Professor D. I. Blokhintsev planned for me, as a winner of a Red Diploma, to continue my education as an aspirant (a graduate student) to prepare for Ph. D. in his very secret Object in the framework of what was in those time called the Atomic Problem. To my regret the KGB withheld permission, and I, together with other Jewish students who had graduated Nuclear Divisions of Moscow and Leningrad Universities and Institutes, were faced with a real prospect of being without any work. It was our good fortune that at that time there was being brought into being the new Cosmic Ray Project (what at that time was also very secret, but not as secret as the Atomic Problem), and after some time we were directed to work on this Project. It was organized and headed by Prof. S. N. Vernov (President of All-Union Section of Cosmic Rays) and Prof. N. V. Pushkov (Director of IZMIRAN); Prof. E. L. Feinberg headed the theoretical part of the Project.
