- Introduces the principles of congenital heart disease and tells you whom and when to refer for specialist care
- Discusses common congenital heart lesions in a practical, easy-to-follow way, with an emphasis on diagnosis and management issues
- Includes an extensive chapter on 'Pregnancy and Contraception' (by Philip J. Steer), essential both for family planning and for managing safely the pregnant woman with congenital heart disease
- Includes chapters on non-cardiac surgery and lifestyle issues such as work, insurability, travel and driving
- Provides invaluable information on dealing with common emergencies; what to do and what not to do

With a wealth of illustrations (including diagrams, EKGs, CXRs, Echocardiograms and cardiac MRIs) and with key point tables, this is an essential guide for all health care professionals managing patients with adult congenital heart disease.

International Tax Law Andrea Amatucci, 2012-07-01 With a century of solid theory behind it, tax law confronts a new reality: the weakening of the tenacious link between the sovereignty of states and taxation. Yet it is to the continuity of certain themes and principles inherent in the various national tax systems that tax law scholarship continues to

look, even as it develops new principles designed to meet the expanding processes of internationalization. This completely updated collection of essays offers an expert comparative analysis, conducted by a sample of the best international tax law scholars, of the fundamental theory of tax law and of the prospects in the near future of tax legislative systems. The emphasis falls naturally on tax theory, jurisprudence, and legislative development in the Member States of the European Union (particularly in Italy, Germany, and Spain), where the process of tax harmonization has been under way for many years. The effect of these processes, via the relevant tax treaties, on the tax systems of Japan and the United States provides a secondary emphasis. Practitioners and academics in tax law will find in this book an invaluable understanding of the challenges that tax law theory strives to meet at this crucial moment in economic history. The essays present a full and reliable exposition of the current theoretical approaches adopted by the various schools of thought in the field, as well as of the main contributions of jurisprudence.

School Phobia, Panic Attacks and Anxiety in Children Marianna Csoti,2003-07-15 Many children are challenged by anxiety at some time in their school career. Bringing together knowledge from her years of teaching and parenting, Márianna Csóti shows how parents and professionals can help children aged five to sixteen move away from the negative

thoughts and behaviour that contribute to school phobia. As well as tackling specific problems of bullying, separation anxiety, social phobia and panic attacks, the author provides information on current therapies and medication for the severely affected and on what to do if the child regresses. The advice can also be used to help guard against another sibling developing school phobia. This positive and practical book is packed with information and guidance for parents, carers, teachers and other child-support professionals, on dealing effectively with the difficulties of children whose lives are being adversely affected by this distressing and very real condition.

Marine Insects Lanna Cheng, 1976 This is the first exhaustive review of literature on marine insects, which are defined in this volume as those that spend at least part of their life in association with the marine environment. Not only are true insects, such as the Collembola and insect parasites of marine birds and mammals, considered, but also other kinds of intertidal air-breathing arthropods, notably spiders, scorpions, mites, centipedes and millipedes, which live and feed with, or even on, the insects of marine habitats. The chapters, written by leading authorities, are divided into two sections, the first treating primarily ecological aspects, the second dealing with major groups of insects in marine environments.

Art and Identity in Thirteenth-Century Byzantium Antony Eastmond, 2017-03-02 The church of Hagia Sophia in Trebizond, built by the emperor Manuel I Grand Komnenos (1238-63) in the aftermath of the fall of Constantinople to the Fourth Crusade, is the finest surviving Byzantine imperial monument of its period. Art and Identity in Thirteenth-Century Byzantium is the first investigation of the church in more than thirty years, and is

extensively illustrated in colour and black-and-white, with many images that have never previously been published. Antony Eastmond examines the architectural, sculptural and painted decorations of the church, placing them in the context of contemporary developments elsewhere in the Byzantine world, in Seljuq Anatolia and among the Caucasian neighbours of Trebizond. Knowledge of this area has been transformed in the last twenty years, following the collapse of the Soviet Union. The new evidence that has emerged enables a radically different interpretation of the church to be reached, and raises questions of cultural interchange on the borders of the Christian and Muslim worlds of eastern Anatolia, the Caucasus and Persia. This study uses the church and its decoration to examine questions of Byzantine identity and imperial ideology in the thirteenth century. This is central to any understanding of the period, as the fall of Constantinople in 1204 divided the Byzantine empire and forced the successor states in Nicaea, Epiros and Trebizond to redefine their concepts of empire in exile. Art is here exploited as significant historical evidence for the nature of imperial power in a contested empire. It is suggested that imperial identity was determined as much by craftsmen and expectations of imperial power as by the emperor's decree; and that this was a credible alternative Byzantine identity to that developed in the empire of Nicaea.

A Short History of Genetics Leslie Clarence Dunn, 1991

The Icons of Their Bodies Henry Maguire, 2000-05-28 The Byzantines surrounded themselves with their saints, invisible but constant companions, who were made visible by dreams, visions, and art. The composition and presentation of this imagined gallery followed a logical structure, a construct that was itself a collective work of art created by

Byzantine society. The purpose of this book is to analyze the logic of the saint's image in Byzantium, both in portraits and in narrative scenes. Here Henry Maguire argues that the Byzantines gave to their images differing formal characteristics of movement, modeling, depth, and differentiation, according to the tasks that the icons were called upon to perform in the all-important business of communication between the visible and the invisible worlds. The book draws extensively on sources that have been relatively little utilized by art historians. It considers both domestic and ecclesiastical artifacts, showing how the former raised the problem of access by lay men and women to the supernatural and fueled the debates concerning the role of images in the Christian cult. Special attention is paid to the poems inscribed by the Byzantines upon their icons, and to the written lives of their saints, texts that offer the most direct and vivid insight into the everyday experience of art in Byzantium. The overall purpose of the book is to provide a new view of Byzantine art, one that integrates formal analysis with both theology and social history.
