Global Biopiracy Ikechi Mgbeoji, 2011-11-01 Legal control and ownership of plants and traditional knowledge of the uses of plants (TKUP) is a vexing issue. The phenomenon of appropriation of plants and TKUP, otherwise known as biopiracy, thrives in a cultural milieu where non-Western forms of knowledge are systemically marginalized and devalued as folk knowledge or characterized as inferior. Global Biopiracy rethinks the role of international law and legal concepts, the Western-based, Eurocentric patent systems of the world, and international agricultural research institutions as they affect legal ownership and control of plants and TKUP.

Environmental Law in Developing Countries Nazrul Islam, 2002 This publication contains four papers on different legal issues of interest to developing countries. The papers were researched and written by four Carl Duisberg Gesellschaft (CDG) Fellows who came to Germany from Bangladesh, Venezuela, Nigeria and China to study under the host leadership of the IUCN Environmental Law Centre. Subjects chosen by these Fellows vary widely, and cover ISO 14001, access to environmental justice in Latin America, patents and plant resources-related knowledge, and law and policy of the European Union on the reduction of greenhouse gas emissions and their significance to China.

Ethical and Legal Considerations in Mitigating Pandemic Disease Institute of Medicine, Board on Global Health, Forum on Microbial Threats, 2007-06-08 In recent public workshops and working group meetings, the Forum on Microbial Threats of the Institute of Medicine (IOM) has examined a variety of infectious disease outbreaks with pandemic potential, including those caused by influenza (IOM, 2005) and severe acute respiratory syndrome (SARS) (IOM, 2004). Particular attention has been paid to the potential pandemic threat posed by the H5N1 strain of avian influenza, which is now endemic in many Southeast Asian bird populations. Since 2003, the H5N1 subtype of avian influenza has caused 185 confirmed human deaths in 11 countries, including some cases of viral transmission from human to human (WHO, 2007). But as worrisome as these developments are, at least they are caused by known pathogens. The next pandemic could well be caused by the emergence of a microbe that is still unknown, much as happened in the 1980s with the emergence of the human immunodeficiency virus (HIV) and in 2003 with the appearance of the SARS coronavirus. Previous Forum meetings on pandemic disease have discussed the scientific and logistical challenges associated with pandemic disease recognition, identification, and response. Participants in these earlier meetings also recognized the difficulty of implementing disease control strategies effectively. Ethical and Legal Considerations in Mitigating Pandemic Disease: Workshop Summary as a factual summary of what occurred at the workshop.

The Logic of Designing Anja Maria Boxleitner, 2023-09-12 In *The Logic of Designing*, the author unlocks the secrets of the practical designing process and sheds light on the underlying principles and interplay of the various qualities of information. Using an insightful research project set in fascinating Las Vegas, she delves deeply into the nature of visual communication. The book explores the importance of different degrees of abstraction to our perception of the world, drawing on empirical research conducted in Las Vegas. Focusing on visual communication, the authors emphasize that reality is not limited to visual entities or a single level of abstraction. Instead, they show how visual communication involves a dynamic interplay of informational qualities that shape our understanding of reality. In an innovative approach, the author explores both the tangible and intangible aspects of information in design. By deciphering how these qualities interact and merge, the book offers new insights into how design profoundly affects our perception and understanding of the world. The transparently presented design process allows for an in-depth analysis that specifically uncovers the informational quality of visually non-informative and non-tangible elements. Empowered by empirical evidence and enriched with theoretical frameworks, 'The Logic of Designing' defies conventional notions and elevates design as a distinct field of knowledge. Concrete examples and tangible revelations within the book provide readers with a deeper understanding of the transformative power of design. As the narrative unfolds, readers gain valuable insights into how design shapes our perception of reality, transcending surface appearances. Embark on a captivating journey as the author deciphers the logic and interplay of information qualities in the realm of design. 'The Logic of Designing' opens your eyes to the intricacies of visual communication, offering a fresh perspective on how we perceive and interact with the world around us. Whether you're a design enthusiast, researcher, or simply curious about the complexity of human perception, this thought-provoking book is a must-read. It uncovers not only the significance of different levels of abstraction but also enlightens readers about the true nature of visual communication.

Intellectual Property Rights and Conservation of Forest Resources Sudhanshu Gupta, 2005 The fruits of human creativity are linked to Intellectual property and are integral to the progress of human kind, an indispensable element in economic development in present global environment. Intellectual property plays an important role in an increasingly broad range of areas, ranging from the Internet, biotechnology, forests, agriculture, health care and nearly all aspects of science and technology. At present, there is a sharp contrast between the wide spread international recognition of biotechnology's benefits and the apprehensions about its possible dangers to ecology. The Book Intellectual Property Rights and Conservation of Forest Resources provides information on international perspective of important issues in the field of patenting. The book examines international agreements, as well as national laws on the Intellectual Property Rights. The book makes readers aware of historical developments associated with IPR and requirements of IPR relating to spatial information or any geo-data . The case study on computerized application for determining vulnerability of species in wild , throws new dimension to determining vulnerability of species. The author, Dr Sudhanshu Gupta, has demonstrated computerized application for determining vulnerability of species in wild and has defined vulnerability of species based on statistically determined probable mathematical estimates. It is a book many people, may like to read to gain new depth and meaning to IPR related resources and their vulnerability.

The Pharaoh's Treasure John Gaudet, 2018-10-02 For our entire history, humans have always searched for new ways to share information. This innate compulsion led to the origin of writing on the rock walls of caves and coffin

lids or carving on tablets. But it was with the advent of papyrus paper when the ability to record and transmit information exploded, allowing for an exchanging of ideas from the banks of the Nile throughout the Mediterranean—and the civilized world—for the first time in human history. In *The Pharaoh's Treasure*, John Gaudet looks at this pivotal transition to papyrus paper, which would become the most commonly used information medium in the world for more than 4,000 years. Far from fragile, papyrus paper is an especially durable writing surface; papyrus books and documents in ancient and medieval times had a usable life of hundreds of years, and this durability has allowed items like the famous Nag Hammadi codices from the third and fourth century to survive.

Avian Influenza Ian Scoones,2010 Over the past decade, substantial resources have been spent on tackling avian influenza and building a global capacity for a pandemic response. The catastrophic costs of the 1918 influenza pandemic are well documented, and the swine flu pandemic of 2009-10 has raised the alarm yet again. Across the world, surveillance systems have been upgraded, stockpiles of antiviral drugs and influenza vaccines have been created, veterinary and public health systems have been improved and poultry production and marketing has been dramatically restructured. What are the lessons from this experience? And what does this suggest for the future? This book explores how virus genetics, ecology and epidemiology intersect with economic, political and policy processes in a variety of places - from Bangkok to Washington, to Jakarta, Cairo, Rome and London. It focuses on the interaction of the international and national responses - and in particular the experiences of Cambodia, Vietnam, Indonesia and Thailand. It asks how effective is the disease surveillance and response system - can it respond to a new pandemic threat? The comparative analysis reveals the challenges and limitations of a technocratic, centralised response, and the need to take seriously local contexts. Drawing from these experiences, the book concludes with a discussion of future prospects and challenges, examining in particular what a 'One World, One Health' approach - where approaches to animal, human and ecosystem health are integrated - would look like in practice.
