Accounting for Risk, Hedging and Complex Contracts A. Rashad Abdel-Khalik,2013-10-08 With the exponential growth in financial derivatives, accounting standards setters have had to keep pace and devise new ways of accounting for transactions involving these instruments, especially hedging activities. Accounting for Risk, Hedging and Complex Contracts addresses the essential elements of these developments, exploring accounting as related to today's most relevant topics - risk, hedging, insurance, reinsurance, and more. The book begins by providing a basic foundation by discussing the concepts of risk, risk types and measurement, and risk management. It then introduces readers to the nature and valuation of free standing options, swaps, forward and futures as well as of embedded derivatives. Discussion and illustrations of the cash flow hedge and fair value hedge accounting treatments are offered in both single currency and multiple currency environments, including hedging net investment in foreign operations. The final chapter is devoted to the disclosure of financial instruments and hedging activities. The combination of these topics makes the book a must-have resource and reference in the field. With discussions of the basic tools and instruments, examinations of the related accounting, and case studies to help students apply their knowledge, this book is an essential, self-contained source for upper-level undergraduate and masters accounting students looking develop an understanding of accounting for today's financial realities.

Hydroprocessing Catalysts And Processes: The Challenges For Biofuels Production
Seddon Duncan,Zhang Bo,2018-04-05 The demand for hydroprocessing catalysts has shown an increasing trend, because of their applications in refining of petroleum and biofuels, in order to comply with strict environmental regulations controlling emissions from transportation vehicles. Transport fuel is dominated by fossil fuels with carbon emission intensive production methods. If we are to move away from these sources, the alternative is to produce liquid fuels from agricultural stocks -- crops, crop waste, forestry waste or algae. Converting these feedstocks into high quality fuels is a considerable challenge. By describing the current status in processing agricultural feedstock into high quality liquid transport fuels, the authors set out the means to develop better chemistry and catalysis for the necessary conversion processes. This book offers an intriguing insight into the mechanisms and protocols involved in new hydroprocessing catalysts and processes, and covers the methods for upgrading these liquids to modern transport vehicles suitable for operation in modern gasoline and diesel engines. It provides an introduction to the mechanism of hydroprocessing reactions, application of different metals in hydroprocessing, the effect of catalyst supports, applications in refining new feedstock, renewable fuels standards, the management of spent hydroprocessing catalysts, and hydrogen production. Hydroprocessing Catalysts and Processes will prove useful for

both researchers in academe and industry concerned with future fuels development and treatment to produce current and future liquid transport fuels. The Howling Storm Kenneth W. Noe, 2020-10-07 Finalist for the Lincoln Prize!

Traditional histories of the Civil War describe the conflict as a war between North and South. Kenneth W. Noe suggests it should instead be understood as a war between the North, the South, and the weather. In *The Howling Storm*, Noe retells the history of the conflagration with a focus on the ways in which weather and climate shaped the outcomes of battles and campaigns. He further contends that events such as floods and droughts affecting the Confederate home front constricted soldiers' food supply, lowered morale, and undercut the government's efforts to boost nationalist sentiment. By contrast, the superior equipment and open supply lines enjoyed by Union soldiers enabled them to cope successfully with the South's extreme conditions and, ultimately, secure victory in 1865. Climate conditions during the war proved unusual, as irregular phenomena such as El Niño, La Niña, and similar oscillations in the Atlantic Ocean disrupted weather patterns across southern states. Taking into account these meteorological events, Noe rethinks conventional explanations of battlefield victories and losses, compelling historians to reconsider long-held conclusions about the war. Unlike past studies that fault inflation, taxation, and logistical problems for the Confederate defeat, his work considers how soldiers and civilians dealt with floods and droughts that beset areas of the South in 1862, 1863, and 1864. In doing so, he addresses the foundational causes that forced Richmond to make difficult and sometimes disastrous decisions when prioritizing the feeding of the home front or the front lines. *The Howling Storm* stands as the first comprehensive examination of weather and climate during the Civil War. Its approach, coverage, and conclusions are certain to reshape the field of Civil War studies.

A Regulators' Guide to the Management of Radioactive Residuals from Drinking Water Treatment Technologies, 2005

The Second Life Herald Peter Ludlow, Mark Wallace, 2007 When a virtual journalist for a virtual newspaper reporting on the digital world of an online game lands on the real-world front page of the New York Times, it just might signal the dawn of a new era. Virtual journalist Peter Ludlow was banned from *The Sims Online* for being a bit too good at his job--for reporting in his virtual tabloid *The Alphaville Herald* on the cyber-brothels, crimes, and strong-arm tactics that had become rife in the game--and when the Times, the BBC, CNN, and other media outlets covered the story, users all over the Internet called the banning censorship. Seeking a new virtual home, Ludlow moved the Herald to another virtual world--the powerful online environment of *Second Life*--just as it was about to explode onto the international mediascape and usher in the next iteration of the Internet. In *The Second Life Herald*, Ludlow and his colleague Mark Wallace take us behind the scenes of the Herald as they report on the emergence of a fascinating universe of virtual spaces that will become the next generation of the World Wide Web: a 3-D environment that provides richer, more expressive interactions than the Web we know today. In 1992, science fiction writer Neal Stephenson imagined the Metaverse, a virtual space that we would enter via the Internet and in which we would conduct important parts of our daily lives. According to Ludlow and Wallace, that future is coming sooner than we may think. They chronicle its chaotic, exhilarating, frightening birth, including the issue that the mainstream media often ignore: conflicts across the client-server divide over who should write the laws governing virtual worlds.
