A Dictionary of German-Jewish Surnames Lars Menk,2005 This dictionary identifies more than 13,000 German-Jewish surnames from the area that was pre-World War I Germany. From Baden-Wuerttemberg in the south to Schleswig-Holstein in the north. From Westfalen in the west to East Prussia in the east. In addition to providing the etymology and variants of each name, it identifies where in the region the name appeared, identifying the town and time period. More than 300 sources were used to compile the book. A chapter provides the Jewish population in many towns in the 19th century.

How Greek Science Passed On To The Arabs Delacy O'Leary,2015-12-22 First published in 2002. The history of science is one of knowledge being passed from community to community over thousands of years, and this is the classic account of the most influential of these movements -how Hellenistic science passed to the Arabs where it took on a new life and led to the development of Arab astronomy and medicine which flourished in the courts of the Muslim

world, later passing on to medieval Europe. Starting with the rise of Hellenism in Asia in the wake of the campaigns of Alexander the Great, O'Leary deals with the Greek legacy of science, philosophy, mathematics and medicine and follows it as it travels across the Near East propelled by religion, trade and conquest. Dealing in depth with Christianity as a Hellenizing force, the influence of the Nestorians and the Monophysites; Indian influences by land and sea and the rise of Buddhism, O'Leary then focuses on the development of science during the Baghdad Khalifate, the translation of Greek scientific material into Arabic, and the effect for all those interested in the history of medicine and science, and of historical geography as well as the history of the Arab world.

Hydropolitical Vulnerability and Resilience Along International Waters
,2007 Water is a unique and vital source, for which there is no substitute. Sustainable development of this rich resource in the region is complex as the distribution of water to all nations is heterogeneous, which increases the risk of being used or adapted inequitably. In recent years the sustainability discourse has broadened to include human systems. The purpose of this publication on hydropolitical vulnerability and resilience along

international is to warrant broader promotion and dissemination of assessed information and data in order to support informed policy-making and provide a model for the regions that face similar water challenges.

Open Learning Cultures Ulf-Daniel Ehlers, 2013-09-12 Today we are seeing a new form of blended learning: not only is technology enhancing the learning environment but formal and informal learning are combining and there is self- and peer-assessment of results. Open learning cultures are challenging the old and long-practiced methods used by educators and transforming learning into a more student-driven and independent activity , which uses online tools such as blogs, wikis or podcasts to connect resources, students and teachers in a novel way. While in higher education institutions most assessments are still tied to formal learning scenarios, teachers are more and more bound to recognize their students' informal learning processes and networks. This book will help teachers, lecturers and students to better understand how open learning landscapes work, how to define quality and create assessments in such environments, and how to apply these new measures. To this end, Ehlers first elaborates the technological background for more collaborative, distributed, informal, and self-guided learning. He covers the rise of social media for learning and shows how an architecture of participation can change learning activities. These new paradigms are then applied to learning and education to outline what open learning landscapes look like. Here he highlights the shift from knowledge transfer to competence development, the

increase in lifelong learning, and the importance of informal learning, user generated content, and open educational resources. He then shows how to manage quality by presenting a step by step guide to developing customized quality concepts for open learning landscapes. Finally, several methods dealing with assessment in these new environments are presented, including guidelines, templates and use cases to exemplify the approaches. Overall, Ehlers argues for assessment as an integral part of learning processes, with quality assurance as a method of stimulating a quality culture and continuous quality development rather than as a simple controlling exercise.

Managing Natural Resources for Sustainable Livelihoods Cynthia McDougall, Barry Pound, 2013-06-17 Management of local resources has a greater chance of a sustainable outcome when there is partnership between local people and external agencies, and agendas relevant to their aspirations and circumstances. Managing Natural Resources for Sustainable Livelihoods analyses and extends this premise to show unequivocally that the process of research for improving natural resource management must incorporate participatory and user-focused approaches, leading to development based on the needs and knowledge of local resource users. Drawing on extensive and highly relevant case studies, this book presents innovative approaches for establishing and sustaining participation and collective decision-making, good practice for research, and challenges for future developments. It covers a wide range of natural resources - including forests and soils, and water

and management units, such as watersheds and common property areas - and provides practical lessons from analysis and meta-analysis of cases from Asia, Africa and Latin America. It offers insights on how to make research participatory while maintaining rigour and high-quality biological science, different forms of participation, and ways to scale up and extend participatory approaches and successful initiatives. This book will be invaluable for those professionally involved in natural resource management for sustainable development and an essential resource for teachers and students of both the biophysical and social science aspects of natural resource management.

Conflicts in Environmental Regulation and the Internationalisation of the State Ulrich Brand, Christoph Görg, Joachim Hirsch, Markus Wissen, 2008-04-24
This book examines the global regulation of biodiversity politics through the UN UNConvention on Biological Diversity (CBD), the WTO and other international treaties. Using historical-materialist state and regulation theory, it assesses how the discourse and politics of sustainable development have contributed to the internationalisation of the state. The authors argue that sustainable development, far from being a fixed concept, is a conceptual terrain on which different and conflicting symbolisations of and solutions responses to of the ecological crisis struggle for hegemony. Furthermore, it shows that the international multilateral environmental organisations agreements are not at all a means to counteract neoliberal globalisation but,

on the contrary, form an integral part of the ongoing transformation process. Focussing on the UN Convention on Biological DiversityCBD, the FAO International Treaty on Plant Genetic Resources for Food and Agriculture and the Agreement on Trade-related Aspects of Intellectual Property Rights (TRIPS) in the World Trade Organisation, this co-authored volume addresses the following issues: state theory, regulation theory and International Political Economy biodiversity protection and valorisation of genetic resources access to genetic resources and sharing of benefits which arise out of its use enforcement of intellectual property rights and their impact on biodiversity. This book will be of interest to students and scholars of international politics, international political economy, environmental studies, development studies and political ecology.

Economic and Societal Transformation in Pandemic-Trapped India Subrata Saha,Mukunda Mishra,Anil Bhuimali,2022-02-04 This book acquaints the reader with the critical changes in India's economy and society amidst the unprecedented pandemic outbreak of COVID-19, which has been devastating by breaking all prior records of illness and fatality. The present crisis is shown to be more than an acute health hazard as it carries with it other threats associated with the economy, society, culture, psychology, and politics. The dynamic driving forces that have a significant bearing on life,

space, and time are explored, providing a basis on which social scientists can understand the prevailing equations and project the unforeseen future to contribute to a policymaking mechanism. The Indian scenario presented here takes into account how the COVID-19-induced lockdown of transport services, closing of factories, and restrictions on mobilization have caused the economy to face a recession, affecting mostly the unorganized sector. Travel restrictions and quarantines affecting hundreds of millions of people have left Indian factories short of labour, causing havoc in the production system. Semi-skilled jobholders have lost their employment, and the country has witnessed the plight of large pools of migrant labourers returning on foot to their homelands hundreds of miles away with their families and belongings. Contributors to this volume are drawn from diverse disciplines, displaying the solidarity of academic knowledge in a physically divided world. This common platform is provided to the practitioners of relevant academic disciplines under the umbrella of regional sciences – a forum for the exchange of ideas that may be effective in the sustainable management of the crisis and a way forward after it is mitigated. Thought-provoking discussions regarding different facets of the crisis are relevant not only to the current times but also to being prepared for the unforeseen post-COVID economic and societal order.
