Capturing Institutional Change Himanshu Jha, 2020-09-10 Institutions are norms that undergird organizations and are reflected in laws and practices. Over time, institutions take root and persist as they are path dependent and thus change resistant. Therefore, it is puzzling when institutions change. One such puzzle has been the enactment of the Right to Information (RTI) Act in India in 2005, which brought about institutional change by transforming the 'information regime'. Why did the government upend the norm of secrecy, which had historically been entrenched within the Indian State? This book uses archival material, internal government documents, and interviews to understand the why and how of institutional change. It demonstrates that the institutional change resulted from 'ideas' emerging gradually and incrementally, leading to a 'tipping point'. About the IDSA Series: This series interrogates the interplay between globalization, the state, and social forces in the making and un-making of institutions in South Asia. Why do institutions persist and change? Do we need to transcend materialism and dwell in ideas and culture as well to understand why institutions perform and fail? The first book in the Institutions and Development in South Asia series, this volume studies the historical institutionalism in the information regime in India by presenting an alternative narrative about the evolution of the RTI Act.

SDG11 - Sustainable Cities and Communities Maha Al-Zu'bi, Vesela Radovic, 2018-11-13 SDG11 will map success stories, policies, and strategies from various regions that include actions to improve natural resources management, reduce GHG emissions, and develop urban adaptation, resilience strategies and disaster risk management to help decision-makers, planners and practitioners in achieving the 2030 SDG agenda.

Making Cities Resilient Vishwa Raj Sharma, Chandrakanta, 2019-02-08 As the world has transformed, so have cities. Today, cities are home to 54 percent of the world's population, and by the middle of this century that figure will likely rise to 66 percent. According to the United Nations (UN) Habitat I (1972), Habitat II (1996) and Habitat III (2016) summits, cities are facing many serious challenges, including growing inequality, security concerns and the worsening impacts of climate change. Uncontrolled urbanization has led to many problems (haphazard growth of areas, emergence of slums, inadequate water and power supply, poor sanitation, shortage of transport and other civic amenities, shrinking green spaces, pollution, crime, and urban disaster risks such as fire, flood, road and industrial accidents, etc.). Worldwide, communities at the international, national and local level are continuously working to improve human habitats. In order to make our planet more sustainable, the UN has moved from the Millennium Development Goals (MDG) to the Sustainable Development Goals (SDG). Among the latter, the aim of SDG 11 is to "...make cities and human settlements inclusive, safe, resilient and sustainable." In light of these challenges, various terms have emerged to help understand urban issues. Visualizing the problem, the United Nations program "Making Cities Resilient" is focused on mitigating the disaster risk in urban areas. This book analyzes terms such as: sustainable, resilient, livable, inclusive, smart and world class city, which have emerged in the process of combating urban challenges in today's world. The book addresses emerging concepts for cities, challenges and potentials, urban environments, health and planning/policies. Covering 14 large cities in India, as well as case studies from Japan, Singapore, Thailand, Malaysia, Poland and Sweden, it provides a regional dimension to and micro-level perspective on urban issues.

Bridging the Valley of Death Great Britain: Parliament: House of Commons: Science and Technology Committee, 2013-03-13 There exists the concept of a valley of death that prevents the progress of science from the laboratory bench to the point where it provides the basis of a commercially successful business or product. The future success of the UK economy has been linked to the success of translating a world class science base to generate new businesses with the consequent generation of UK jobs and wealth. A troubling feature of technology companies in the UK is how many are acquired by foreign owners where the subsequent jobs and wealth are generated outside the UK. It is key that the Government ensure that sufficient capital is available and recommended that the proposed bank for business, possibly in partnership with the Business Growth Fund, be used to promote a bond market for medium sized businesses, thus providing growing small businesses with an additional source of funding. It is also recommended that the Government investigate the potential to require funds to have a proportion of European SME equities. There needs to be a mechanism to support SME's who do disproportionately badly from the current R&D tax credit scheme. The Technology Strategy Board is becoming the focus for government innovation policy and Government should consider how they can resource the TSB to provide local level advice to technology businesses. The Small Business Research Initiative (SBRI) and the SMART Award scheme would appear to be successful initiatives but lack sufficient funds to meet the demand from companies

The Renewable Energy Landscape Dean Apostol, James Palmer, Martin Pasqualetti, Richard Smardon, Robert Sullivan, 2016-08-19 Winner of the 2017 EDRA Great Places Award (Research Category) Winner of the 2017 VT ASLA Chapter Award of Excellence (Communications Category) The Renewable Energy Landscape is a definitive guide to understanding, assessing, avoiding, and minimizing scenic impacts as we transition to a more renewable energy future. It focuses attention, for the first time, on the unique challenges solar, wind, and geothermal energy will create for landscape protection, planning, design, and management. Topics addressed include: Policies aimed at managing scenic impacts from renewable energy development and their social acceptance within North America, Europe and Australia Visual characteristics of energy facilities, including the design and planning techniques for avoiding or mitigating impacts or improving visual fit Methods of assessing visual impacts or energy projects and the best practices for creating and using visual simulations Policy recommendations for political and regulatory bodies. A comprehensive and practical book, The Renewable Energy Landscape is an essential resource for those engaged in planning, designing, or regulating the impacts of these new, critical energy sources, as well as a resource for communities that may be facing the prospect of development in their local landscape.

The Alternative Investment Fund Managers Directive Dirk A. Zetsche, 2015-09-14 Apart from MiFID, the Alternative Investment Fund Managers Directive (AIFMD) may be the most important European asset management regulation of the early twenty-first century. In this in-depth analytical and critical discussion of the content and system of the directive, thirty-eight contributing authors – academics, lawyers, consultants, fund supervisors, and fund industry experts – examine the AIFMD from every angle. They cover structure, regulatory history, scope, appointment and authorization of the manager, the requirements for depositaries and prime brokers, rules on delegation, reporting requirements, transitional provisions, and the objectives stipulated in the recitals and other official documents. The challenging implications and contexts they examine include the following: - connection with systemic risk and the financial crisis; - nexus with insurance for negligent conduct; - connection with corporate governance doctrine; - risk management; - transparency; - the cross-border dimension; - liability for lost assets; - impact on alternative investment strategies, and - the nexus with the European Regulation on Long-Term Investment Funds (ELTIFR). Nine country reports, representing most of Europe's financial centres and fund markets add a national perspective to the discussion of the European regulation. These chapters deal with the potential interactions among the AIFMD and the relevant laws and regulations of Austria, France, Germany, Italy, Luxembourg, Liechtenstein, The Netherlands, Malta and the United Kingdom. The second edition of the book continues to deliver not only the much-needed discussion of the inconsistencies and difficulties when applying the directive, but also provides guidance and potential solutions to the problems it raises. The second edition considers all new developments in the field of alternative investment funds, their managers, depositaries, and prime brokers, including, but not limited to, statements by the European Securities and Markets Authority (ESMA) and national competent authorities on the interpretation of the AIFMD, as well as new European regulation, in particular the PRIIPS Regulation, the ELTIF Regulation, the Regulation on European Venture Capital Funds (EuVeCaR), the Regulation on European Social Entrepreneurship Funds (EUSEFR), MiFID II, and UCITS V. The book will be warmly welcomed by investors and their counsel, fund managers, depositaries, asset managers, administrators, as well as regulators and academics in the field.

SDG11, Sustainable Cities and Communities Shyama V. Ramani, Hiroshan Hettiarachchi, 2022-06-17 This book explores Sustainable Development Goal (SDG) 11, providing insights into viable pathways and policy designs for a transition towards sustainable, inclusive and resilient cities. The volume discusses existing scientific literature on SDG 11 and provides conceptual frameworks relating to systemic transitions, sectoral transitions and behavioural transitions for overcoming challenges related to governance and implementation. Through detailed case studies from cities and

settlements, in Europe, Middle East and Asia, it showcases the dynamic processes involved in urban transformations. International Arbitration in the Energy Sector Maxi Scherer,2018-02-22 Disputes in the energy and natural resources sector are at the heart of international arbitration. With more arbitrations arising in the international energy sector than in any other sector, it is not surprising that the highest valued awards in the history of arbitration come from energy-related arbitrations. Energy disputes often involve complex and controversial issues relating to security, sovereignty, and public welfare. International Arbitration in the Energy Sector puts international energy disputes into a global context, providing broad coverage of different forms and systems of dispute resolution across both renewable and non-renewable sectors. With contributions from leading practitioners, arbitrators, academics, and industry experts from across the globe, the eighteen chapters in the book enable readers to compare the approaches to, and learnings from, energy arbitrations across various legal systems and geographic regions. After outlining the international energy arbitration legal framework, the text delves into a detailed analysis of the problems which regularly arise in practice. These include, among other things, commercial disputes in Part I (e.g. over the upstream oil sector and long-term gas supply contracts), investor-state disputes in Part II (e.g. under the Energy Charter Treaty), and public international law disputes in Part III (e.g. concerning international boundaries and the distribution of natural resources). Alongside recent developments in the international energy sector, attention is given to climate and sustainable development disputes, which raise important questions about enforcing sustainability objectives on individuals, corporations, and states. Backed by analyses of arbitral awards, national court and international tribunal decisions, treaties, and other international legal instruments, as well as current events and news in the energy industry, this text offers a unique contribution to international energy literature and provides insightful commentary on the prevalent issues in the field. It is essential reading for any practitioner or researcher in the energy and natural resources sector.

Political Arithmetic Robert William Fogel,Enid M. Fogel,Mark Guglielmo,Nathaniel Grotte,2013-04-15 We take for granted today that the assessments, measurements, and forecasts of economists are crucial to the decision-making of governments and businesses alike. But less than a century ago that wasn't the case—economists simply didn't have the necessary information or statistical tools to understand the ever more complicated modern economy. With Political Arithmetic, Nobel Prize-winning economist Robert Fogel and his collaborators tell the story of economist Simon Kuznets, the founding of the National Bureau of Economic Research, and the creation of the concept of GNP, which for the first time enabled us to measure the performance of entire economies. The book weaves together the many strands of political and economic thought and historical pressures that together created the demand for more detailed economic thinking—Progressive-era hopes for activist government, the production demands of World War I, Herbert Hoover's interest in business cycles as President Harding's commerce secretary, and the catastrophic economic failures of the Great Depression—and shows how, through trial and error, measurement and analysis, economists such as Kuznets rose to the occasion and in the process built a discipline whose knowledge could be put to practical use in everyday decision-making. The product of a lifetime of studying the workings of economies and skillfully employing the tools of economics, Political Arithmetic is simultaneously a history of a key period of economic thought and a testament to the power of applied ideas.

Investment Climate Reforms World Bank World Bank,2015-11-02 Private firms are at the forefront of the development process, providing more than 90 percent of jobs, supplying goods and services, and representing a significant source of tax revenues. Their ability to grow, create jobs, and reduce poverty depends critically on a well-functioning investment climate--defined as the policy, legal, and institutional arrangements underpinning the functioning of markets and the level of transaction costs and risks associated with starting, operating, and closing a business. The World Bank Group has provided extensive support to investment climate reforms. This evaluation by the Independent Evaluation Group (IEG) assesses the relevance, effectiveness, and social value of World Bank Group support to investment climate reforms as it relates to concerns for inclusion and shared prosperity. IEG finds that the World Bank Group has supported a comprehensive menu of investment climate reforms and has improved investment climate in countries, as measured by number of laws enacted, streamlining of processes and time, or simple cost savings for private firms. However, the impact on investment, jobs, business formation, and growth is not straightforward. Regulatory reforms need to be designed and implemented with both economic and social costs and benefits in mind; IEG found that, in practice, World Bank Group support focuses predominantly on reducing costs to businesses. In supporting investment climate reforms, the World Bank and the International Finance Corporation use two distinct but complementary business models. Despite the fact that investment climate is the most integrated business unit in the World Bank Group, coordination is mostly informal, relying mainly on personal contacts. IEG recommends that the World Bank Group expand its range of diagnostic tools and integrate them in the areas of the business environment not yet covered by existing tools; develop an approach to identify the social effects of regulatory reforms on all groups expected to be affected by them beyond the business community; and exploit synergies by ensuring that World Bank and IFC staff improve their understanding of each other's work and business models.

The Spread of Economic Ideas David C. Colander,Alfred William Coats,1993-01-29 This book, first published in 1989, contains a spirited debate between eminent economists, journalists, and publishers about the spread of economic ideas. The examination of the flow of ideas among economists and from economists to the public is followed by a discussion of the public policy use and abuse of these concepts.
