Chemistry for Sustainable Development Minu Gupta Bhowon, Sabina Jhaumeer-Laulloo, Henri Li Kam Wah, Ponnadurai Ramasami, 2012-01-08 Chemistry for Sustainable Development is a collection of selected papers by the participants of the International Conference on Pure and Applied Chemistry (ICPAC 2010) on the theme of "Chemistry for Sustainable Development" held in Mauritius in July 2010. In light of the significant progresses and challenges in the development and implementation of green and sustainable chemistry, this volume reviews the recent results generated by a more efficient use of resources to minimize carbon footprints, to foster the eradication or minimisation of solvent use in chemistry, and to deliver processes which lead to increased harmony between chemistry and the environment. Chemistry for Sustainable Development is written for graduates, postgraduates, researchers in industry and academia who have an interest in the fields ranging from fundamental to applied chemistry.

The Psychophysiology Primer Benjamin Cowley, Marco Filetti, Kristian Lukander, Lauri Ahonen, Andreas Henelius, Oswald Barral, Jari Torniainen, Minna Huotilainen, Ilkka Kosunen, Giulio Jacucci, Niklas Ravaja, Teppo Valtonen, 2016-10-05 The Psychophysiology Primer provides a foundational review of the field of psychophysiology to serve as a primer for the novice, enabling rapid familiarisation with the core concepts, or as a quick reference resource for advanced readers.

De Sphaera of Johannes de Sacrobosco in the Early Modern Period Matteo Valleriani, 2020-01-01 This open access book explores commentaries on an influential text of pre-Copernican astronomy in Europe. It features essays that take a close look at key intellectuals and how they engaged with the main ideas of this qualitative introduction to geocentric cosmology. Johannes de Sacrobosco compiled his Tractatus de sphaera during the thirteenth century in the frame of his teaching activities at the then recently founded University of Paris. It soon became a mandatory text all over Europe. As a result, a tradition of commentaries to the text was soon established and flourished until the second half of the 17th century. Here, readers will find an informative overview of these commentaries complete with a rich context. The essays explore the educational and social backgrounds of the writers. They also detail how their careers developed after the publication of their commentaries, the institutions and patrons they were affiliated with, what their agenda was, and whether and how they actually accomplished it. The editor of this collection considers these scientific commentaries as genuine scientific works. The contributors investigate them here not only in reference to the work on which it comments but also, and especially, as independent scientific contributions that are socially, institutionally, and intellectually contextualized around their authors.

Brain Informatics Mufti Mahmud, Stefano Vassanelli, M. Shamim Kaiser, Ning Zhong, 2020-09-18 This book constitutes the refereed proceedings of the 13th International Conference on Brain Informatics, BI 2020, held in Padua, Italy, in September 2020. The conference was held virtually due to the COVID-19 pandemic. The 33 full papers were carefully reviewed and selected from 57 submissions. The papers are organized in the following topical sections: cognitive and computational foundations of brain science; investigations of human information processing systems; brain big data analytics, curation and management; informatics paradigms for brain and mental health research; and brain-machine intelligence and brain-inspired computing.

Natural Products From Marine Algae Dagmar B. Stengel, Solène Connan, 2016-10-13 This volume provides a fundamental overview of the current state of the art in natural products from marine algae, linking the complex and diverse natural resource with recent developments in extraction, analytical and bioactivity testing methodologies. Natural Products from Marine Algae: Methods and Protocols guides readers through protocols and techniques on algal biotechnology, metabolites, Solid-Liquid Extraction (SLE), Microwave Assisted Extraction (MAE), Liquid Chromatography, Gas Chromatography, Nuclear Magnetic Resonance Spectroscopy, Infra-red spectroscopy and Raman Spectroscopy. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls. Authoritative and cutting-edge, Natural Products from Marine Algae: Methods and Protocols hopes to

aid scientists unravel and quantify algal chemical diversity and support further marine biotechnological developments.

Engraved Gems Ben van den Bercken, V. C. P. Baan, 2017 This book discusses different types of engraved gems in the collection of the Rijksmuseum van Oudheden Leiden, their makers, users and re-users, combining archaeological, cultural historical and geological perspectives.

Thesis Writing for Master's and Ph.D. Program Subhash Chandra Parija, Vikram Kate, 2018-11-03 This book on Thesis Writing for Master's and Ph.D. program focuses on the difficulties students encounter with regard to choosing a guide; selecting an appropriate research title considering the available resources; conducting research; and ways to overcome the hardships they face while researching, writing and preparing their dissertation for submission. Thesis writing is an essential skill that medical and other postgraduates are expected to learn during their academic career as a mandatory partial requirement in order to receive the Master's degree. However, at the majority of medical schools, writing a thesis is largely based on self-learning, which adds to the burden on students due to the tremendous amount of time spent learning the writing skills in addition to their exhausting clinical and academic work. Due to the difficulties faced during the early grooming years and lack of adequate guidance, acquiring writing skills continues to be a daunting task for most students. This book addresses these difficulties and deficiencies and provides comprehensive guidance, from selecting the research title to publishing in a scientific journal.

Immobilization of Enzymes and Cells Jose M. Guisan, Juan M. Bolivar, Fernando López-Gallego, Javier Rocha-Martín, 2021-01-29 This fourth edition volume expands on the previous editions with new insights on important aspects to take into account when immobilizing enzymes and cells, illustrating outstanding examples that support those aspects, and exploring ways to fabricate and characterize heterogeneous biocatalysts including both immobilized enzymes and cells. The transformation of soluble and usually unstable enzymes into heterogeneous and highly stable biocatalysts is strongly emphasized. The chapters in this book cover topics such as the importance of enzyme orientation on the support surface; application and characterization of immobilized enzymes; different functionalization chemistries for the modulation of the immobilized enzyme properties; co-immobilization of multi-enzyme systems; new analytical techniques for the characterization of heterogeneous biocatalysts; protocols for cell entrapment in alginate; preparation and characterization of biofilms; and cell encapsulation technologies. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics,

lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Cutting-edge and authoritative, *Immobilization of Enzymes and Cells: Methods and Protocols*, Fourth Edition is a valuable resource for researchers interested in expanding their knowledge of this developing field.

Platinum and Other Metal Coordination Compounds in Cancer Chemotherapy Stephen B. Howell, 1991 Taken together the data presented in this review, and work by many other investigators, support the notion that DNA excision repair is important in a tumor cell's resistance to platinum compounds. Inhibition of this repair system by combination chemotherapy with the excision repair inhibitors HU and Ara-C produces synergistic cell kills and increased levels and persistence of DNA interstrand crosslinks. The studies with cis-DDP and ~-DDP in combination with UV induced thymine dimers suggest that there may be competition for DNA repair enzymes between the dimer and the platinum lesion. Whether the competing lesion is an intrastrand crosslink, interstrand crosslink, or platinum monoadduct (or all of these lesions) cannot be determined. The similarity between an intrastrand crosslink and a cyclobutane dimer suggests that these lesions may compete for repair. However, the increased peak levels of interstrand crosslinks, and increased persistence of these lesions at later time points suggest that this lesion may also be a substrate for the repair system. These observations may be of clinical relevance. Recently Dr. Kathy Albain of our institution has completed a Phase III I study using a 12 hour pretreatment with HU and Ara-C in patients prior to their cis-DDP therapy. She observed a significant number of responders in this trial (54). She is currently completing a second Phase III study substituting IV HU for the oral formulation. We anticipate initiating other clinical trials based upon these observations.

This Is My Desire Miranda Klaver, 2011-05-20 In the Dutch late modern society, the presence of thriving new evangelical and Pentecostal churches is remarkable against the backdrop of the widespread decline of traditional, mainstream churches. Using an ethnographic approach, this book examines the experiences of newcomers to contemporary evangelicalism through the lens of two churches: an evangelical seeker church and a neo-Pentecostal, charismatic church. While both churches share an emphasis on conversion, there are substantial differences in their approach to and understanding of the Holy Spirit. By comparing the conversion experiences of newcomers with strategies of conversion employed by each church, this book sheds new light on the profound differences in orientation found within Dutch evangelicalism. Drawing upon theories of the body and embodiment, this qualitative, in-depth study departs from the notion that religion is limited to the mind, involving cognitively affirmed beliefs; conversely, it offers a semiotic approach to understanding religion that takes into account the importance of affects, emotions and desires in processes of conversion. This book also engages in an analytical comparison of the design and use of worship space, worship music and distinct language ideologies used by the two churches to stimulate conversion. It argues that the ways in which newcomers learn conversion, through the Alpha course, baptism and church participation, are anchored in embodied processes and, as such, imply a religious pedagogy of the senses. This study thus marks the need for a more sensorial and embodied approach to understand contemporary forms of Christianity in Dutch society. Miranda Klaver (1962) completed her PhD at the Department of Social and Cultural Anthropology (Faculty of Social Science) of the VU University Amsterdam. She obtained her Masters degrees in Cultural Anthropology and Theology.

Getting Into Print Walter W. Powell, 1988-09-15 Based on extensive fieldwork at two well-known commercial publishers of scholarly books, Walter W. Powell details the different ways in which both internal politics and external networks influence decisions about what should be published. Powell focuses on the work of acquisitions editors: how they decide which few manuscripts, out of hundreds, to sponsor for publication; how editorial autonomy is shaped, but never fully curbed, by unobtrusive controls; and how the search process fits into the social structure of the American academy. Powell's observations—and the many candid remarks of publishers and their staffs—recreate the workaday world of publishing. Throughout, the sociology of organizations and of culture serves as Powell's interpretive framework. Powell shows how scholarly publishers help define what is good social science research and how the history and tradition of a publishing house contribute to the development of an

organizational identity. Powell's review of actual correspondence, from outside letters proposing projects to internal kill letters of rejection, suggests that editors and authors at times form their own quasi-organization with external allegiances and bonds beyond those of the publishing house. This is a welcome addition to the literature on the life of the organizations that produce our science and our culture. Powell's intimate look at two scholarly publishing companies has an insider's appreciation of the book business and an outsider's eye for questions the editors are not asking themselves.—Michael Schudson, University of California at San Diego
 Getting Into Print will long be the book about how academic editors choose the titles they sponsor. Even experienced editors and authors will find new insights here and revealing comparisons with decision-making in other kinds of organizations.—Edward Tenner, Los Angeles Times Book Review
 Getting Into Print is an unusually outstanding ethnographic study in that it reflects the evocative richness of detail associated with the ethnographic approach while simultaneously maintaining a clear-headed, analytical distance from the subject that allows for a meaningful theoretical contribution. Powell is an astute ethnographer who presents a vital and compelling 'insider's view' of the decision-making process in scholarly publishing, making this book fascinating reading for all those involved in the 'publish-or-perish' syndrome.—Barbara Levitt, American Journal of Sociology

Introduction to Magnetochemistry Alan Earnshaw, 2013-10-22
 Introduction to Magnetochemistry provides an introduction to the more important aspects of magnetochemistry. The measurement of magnetic moment has been one of the most consistently useful to coordination chemists. For teaching purposes it provides a simple method of illustrating the ideas of electronic structure, and in research it can provide fundamental information about the bonding and stereochemistry of complexes. The book contains six chapters covering topics such as free atoms and ions, transition metal complexes, crystal field theory, second and third row transition metal complexes, antiferromagnetism, and spin-pairing of electrons. The final chapter describes important experimental methods and then shows briefly the way in which the problems of interpretation may be tackled.

Williams Gynecology, Third Edition John O. Schorge, Lisa M. Halvorson, Joseph I. Schaffer, Marlene M. Corton, Karen D. Bradshaw, Barbara L. Hoffman, 2016-04-22
 Publisher's Note: Products purchased from Third Party sellers are not guaranteed by the publisher for quality, authenticity, or access to any online entitlements included with the product. The only gynecology textbook to combine a comprehensive quick-reference guide and a full-color surgical atlas in one beautifully illustrated volume A Doody's Core Title for 2017! Williams Gynecology provides comprehensive coverage of the full spectrum of gynecologic healthcare and disease management, including benign general gynecology; reproductive endocrinology, infertility, and menopause; female pelvic medicine and reconstructive surgery; and gynecologic oncology. The surgical management sections include Aspects of Gynecologic Surgery and Atlas of Gynecologic Surgery, which covers Surgeries of Benign Gynecologic Conditions, Minimally Invasive Surgery, Surgeries for Female Pelvic Reconstruction, and Surgeries for Gynecologic Malignancies. Williams Gynecology, Third Edition is beautifully illustrated, with hundreds of original drawings for both the surgical atlas and medical reference portions. Each chapter follows a practical template for a consistent approach to diagnosis and treatment. With its extensive use of treatment algorithms, differential diagnosis boxes, and other elements, this book is an outstanding quick-reference. Features · Two resources in one—full-color medical text and surgical atlas—surveys the entire spectrum of gynecologic disease, including general gynecology, reproductive endocrinology and infertility, urogynecology, and gynecologic oncology · Illustrated atlas of gynecologic surgery contains over 450 full color figures that depict operative techniques · Unique templated text design ensures a consistent approach to diagnosis and treatment · Strong procedure orientation covers a vast array of surgical operations, which are illustrated in detail

Progress and Visions in Quantum Theory in View of Gravity Felix Finster, Domenico Giulini, Johannes Kleiner, Jürgen Tolksdorf, 2020-04-09
 This book focuses on a critical discussion of the status and prospects of current approaches in quantum mechanics and quantum field theory, in

particular concerning gravity. It contains a carefully selected cross-section of lectures and discussions at the seventh conference "Progress and Visions in Quantum Theory in View of Gravity" which took place in fall 2018 at the Max Planck Institute for Mathematics in the Sciences in Leipzig. In contrast to usual proceeding volumes, instead of reporting on the most recent technical results, contributors were asked to discuss visions and new ideas in foundational physics, in particular concerning foundations of quantum field theory. A special focus has been put on the question of which physical principles of quantum (field) theory can be considered fundamental in view of gravity. The book is mainly addressed to mathematicians and physicists who are interested in fundamental questions of mathematical physics. It allows the reader to obtain a broad and up-to-date overview of a fascinating active research area.

Molecular Logic-based Computation A Prasanna de Silva, 2016-01-13 We all learn - in schools, factories, bars and streets. We gather, store, process and transmit information in society. Molecular systems involved in our senses and within our brains allow all this to happen and molecular systems allow living things of all kinds to handle information for the purpose of survival and growth. Nevertheless, the vital link between molecules and computation was not generally appreciated until a few decades ago. Semiconductor-based information technology had penetrated society at many levels and the interest in maintaining momentum of this revolution led to the consideration of molecules, among others, as possible information handlers. Such an overlap between the recent engineering-oriented revolution with the ancient biology-oriented success story is very interesting and George Boole's times in Ireland 150 years ago produced the logic ideas that provide the foundations of computation to this day. Molecular logic and computation is a field which is 17 years young, has had a healthy growth and is a story which deserves to be told. It is a growing branch of chemical science which highlights the connection between information technology (engineering and biological) and chemistry. The author and co-workers of this publication launched molecular logic as an experimental field by publishing the first research in the primary literature in 1993 and are uniquely placed to recount how the field has grown. There is no other book at present on molecular logic and computation and is more comprehensive than that found in any review available so far. It shows how designed molecules can play the role of information processors in a wide variety of situations, once we are educated by those information processors already available in the semiconductor electronics business and in the natural world. Following a short history of the field, is a set of primers on logic, computing and photochemical principles which are an essential basis in this field. The book covers all of the Boolean logic gates driven by a single input and all of those with double inputs and the wide range of designs which lie beneath these gates is a particular highlight. The easily-available diversity of chemical systems is another highlight, especially when it leads to reconfigurable logic gates. Further on in the book, molecular arithmetic and other more complex logic operations, including those with a memory and those which stray beyond binary are covered. Then follows molecular computing approaches which lie outside the Boolean blueprint, including quantum phenomena and finally, the book catalogues the useful real-life applications of molecular logic and computation which are already available. This book is an authoritative, state of the art, reference and a 'one-stop-shop' concerning the current state of the field for scientists, academics and postgraduate students.

Whispering the Strategies of Language: An Mental Quest through **Claudia Reedijk.htm**

In a digitally-driven world wherever screens reign supreme and instant connection drowns out the subtleties of language, the profound strategies and emotional nuances concealed within words frequently get unheard. However, set within the pages of **Claudia Reedijk.htm** a captivating literary prize pulsing with organic thoughts, lies an exceptional journey waiting to be undertaken. Composed by a talented wordsmith, this wonderful opus encourages visitors on an introspective trip, gently unraveling the veiled truths and profound influence resonating within the fabric of every word. Within

the emotional depths of this moving evaluation, we shall embark upon a heartfelt exploration of the book is primary styles, dissect their interesting writing fashion, and succumb to the effective resonance it evokes strong within the recesses of readers hearts.
