ARTICLES BY VIVEKANANDA Swami

Vivekananda, 2021-01-01 Classification or grouping of phenomena by their similarities is the first step in scientific knowledge – perhaps it is all. An organized grouping, revealing to us a similarity running through the whole group, and a conviction that under similar circumstances the

group will arrange itself in the same form – stretched over all time, past, present and future – is what we call law. This finding of unity in variety is really what we call knowledge. These different groups of similars are stowed away in the pigeon-holes of the mind, and when a new fact comes before us we begin to search for a similar group already existing in one of the pigeon-holes of the mind. If we succeed in finding one ready-made, we take the newcomer in immediately. If not, we either reject the new fact, or wait till we find more of his kind, and form a new place for the group.

Economic Growth and Environmental Sustainability

Paul Ekins, 2002-01-04 A key area of public policy in the last twenty years is the question of how, and how much, to protect the environment. At the heart of this has been the heated debate over the nature of the relationship between economic growth and environmental sustainability. Is environmental sustainability economic growth or 'green growth', a contradiction in terms? Avoiding the confusion that often surrounds these issues, Ekins provides rigorous expositions of the concept of sustainability, integrated environmental and economic accounting, the Environmental Kuznets Curve, the economics of climate change and environmental taxation. Individual chapters are organised as self-contained, state-of-the-art expositions of the core issues of environmental economics, with extensive cross-referencing from one chapter to another, in order to guide the student or policy-maker through these complex

problems. Paul Ekins breaks new ground in defining the conditions of compatibility between economic growth and environmental sustainability, and provides measures and criteria by which the environmental sustainability of economic growth, as it occurs in the real world, may be judged. It is argued that 'green growth' is not only theoretically possible but economically achievable and the authors show what environmental and economic policies are required to achieve this. *Economic Growth and Environmental Sustainability* will be welcomed by students of and researchers in environmental economics and environmental studies, as well as all interested policy-makers.

Improving Gender Equity in Access to Land Food and Agriculture Organization of the United Nations,2006 This guide has been prepared to support non-governmental organizations that are working to promote more equitable access to land for women and men in rural communities. In most societies, access to land has favoured certain

individuals and groups at the expense of others. Women are one of the groups that often have fewer and weaker rights to land. The guide addresses gender relations and how their structure affects access to land. It presents strategies to improve gender equity by evaluating the current situation to identify what gender issues exist, by informing people of their rights to land, and by working to empower the marginalized.
