Computers, Phones, and the Internet Robert Kraut, Malcolm Brynin, Sara Kiesler, 2006-07-06 During the past decade, technology has become more pervasive, encroaching more and more on our lives. Computers, cell phones, and the internet have an enormous influence not only on how we function at work, but also on how we communicate and interact outside the office. Researchers have been documenting the effect that these types of technology have on individuals, families, and other social groups. Their work addresses questions that relate to how people use computers, cell phones, and the internet, how they integrate their use of new technology into daily routines, and how family function, social relationships, education, and socialization are changing as a result. This research is being conducted in a number of countries, by scientists from a variety of disciplines, who publish in very different places. The result is that it is difficult for researchers and students to get a current and coherent view of the research literature. This book brings together the leading researchers currently investigating the impact of information and communication technology outside of the workplace. Its goal is to develop a consolidated view of what we collectively know in this fast-changing area, to evaluate approaches to data collection and analysis, and to identify future directions for research. The book will appeal to professionals and students in social psychology, human-technology interaction, sociology, and communication.

Life Span Development Robert S. Feldman, 2010-06-29 For Human Development/Lifespan Development courses organized topically. Life Span Development: A Topical Approach is based on the chronologically-organized, highly popular Development Across the Life Span, is be approximately 20% shorter than traditional lifespan books and organized topically . Feldman maintains the student friendliness that has been the hallmark of Feldman's other development textbooks. It is rich in examples and illustrates the applications that can be derived from the research and theory of lifespan developmentalists. It pays particular attention to the applications that can be drawn from theory and research in the field. To optimize student learning and to provide instructors with maximum flexibility, the book uses a modular approach. Consequently, rather than facing long, potentially daunting chapters, students encounter material that is divided into smaller, more manageable chunks (modules). Ama Mazama Molefi Kete Asante,2020-08-20 Ama Mazama: The Ogunic Presence in Africology is a critical analysis of the ideas of Ama Mazama, a prominent and leading female theorist in Africology and African American Studies. Molefe Asante studies the creative and productive power of Mazama's intellectual work as it emerges from the personal wrestling with spiritual elements of consciousness as well as Mazama's attention to ancestral and perhaps epigenetic relationships to African spirituality in the making of theory and practice. Painting a picture of an activist intellectual concerned as much with mental as well as spiritual liberation, Asante demonstrates how and why Ama Mazama has evolved into one of the most popular Africologists in the field.

Historical Eclipses and Earth's Rotation F. Richard Stephenson,2008-03-24 The culmination of many years of research, this book discusses ancient and medieval eclipse observations and their importance in studying Earth's past rotation. This is the first major book on this subject in twenty years. The author has specialized for many years in the interpretation of early astronomical records and their application to problems in modern astronomy. The book contains an in-depth discussion of numerous eclipse records from Babylon, China, Europe and the Arab lands. The author provides translations of almost every record studied. He shows that although tides play a dominant long-term role in producing variations in Earth's rate of rotation--causing a gradual increase in the length of the day--there are significant and variable nontidal changes in opposition to the main trend. This book is intended for geophysicists, astronomers (especially those with an interest in history), historians and orientalists.
