Daisy Miller Henry James, 2011-11-14 Henry James's *Daisy Miller* was an immediate sensation when it was first published in 1878 and has remained popular ever since. In this novella, the charming but inscrutable young American of the title shocks European society with her casual indifference to its social mores. The novella was popular in part because of the debates it sparked about foreign travel, the behaviour of women, and cultural clashes between people of different nationalities and social classes. This Broadview edition presents an early version of James's best-known novella within the cultural contexts of its day. In addition to primary materials about nineteenth-century womanhood, foreign travel, medicine, philosophy, theatre, and art—some of the topics that interested James as he was writing the story—this volume includes James's ruminations on fiction, theatre, and writing, and presents excerpts of *Daisy Miller* as he rewrote it for the theatre and for a much later and heavily revised edition.

An Introduction to Sustainable Transportation Preston L. Schiller,Jeffrey R. Kenworthy,2010-08-12 Transportation plays a substantial role in the modern world; it provides tremendous benefits to society, but it also imposes significant economic, social and environmental costs. Sustainable transport planning requires integrating environmental, social, and economic factors in order to develop optimal solutions to our many pressing issues, especially carbon emissions and climate change. This essential multi-

authored work reflects a new sustainable transportation planning paradigm. It explores the concepts of sustainable development and sustainable transportation, describes practical techniques for comprehensive evaluation, provides tools for multi-modal transport planning, and presents innovative mobility management solutions to transportation problems. Students of various disciplines, planners, policymakers and concerned citizens will find many of its provocative ideas and approaches of considerable value as they engage in the processes of understanding and changing transportation towards greater sustainability. This text reflects a fundamental change in transportation decision making. It focuses on accessibility rather than mobility, emphasizes the need to expand the range of options and impacts considered in analysis, and provides practical tools to allow planners, policy makers and the general public to determine the best solution to the transportation problems facing a community. The book starts by placing transportation within the broader sustainability discussion, emphasising a comprehensive approach to sustainability planning and introducing the notion of 'regenerative transportation'. In sections on policymaking and planning the book examines how decisions are currently, and how they should be, made - explaining

the complex and often misunderstood area of public participation. The authors explain demand management as applied to transportation and present lessons from other public arenas and areas of application, especially in urban-suburban areas. The text takes readers through each and every mode of transport, beginning with human-powered modes and ending in motorized modes, including marine and air transport. The modes are analyzed separately and in comparison with others according to several criteria: Capacity/utility/functionality considerations; infrastructure demands; resource consumption; land use considerations; pollution; and costs. In ways that non-technically trained readers as well as planning students professionals can find useful the book includes guidance on how to optimize transportation systems; balancing economic, social and environmental objectives while creating just, robust, and diverse, rather than one-size-fits-all, solutions. The modes are grouped and compared within their respective contexts, and there is vital discussion and differentiation between passenger and freight-goods transport. The final section develops a comprehensive summary of the previous chapters and develops arguments for sustainable transportation policymaking and integrated planning, providing international examples and case

studies and extracting from them general applications for integrated sustainable transportation. Featuring extensive international examples and case-studies, textboxes, graphics, recommended reading and end of chapter questions, the authors draw on considerable teaching and researching experience to present an essential, ground-breaking and authoritative text on sustainable transport.

Assistive Technology for Blindness and Low Vision Roberto Manduchi, Sri Kurniawan, 2018-09-03 Assistive technology has made it feasible for individuals with a wide range of impairments to engage in many activities, such as education and employment, in ways not previously possible. The key factor is to create consumer-driven technologies that solve the problems by addressing the needs of persons with visual impairments. Assistive Technology for Blindness and Low Vision explores a broad range of technologies that are improving the lives of these individuals. Presenting the current state of the art, this book emphasizes what can be learned from past successful products, as well as what exciting new solutions the future holds. Written by world-class leaders in their field, the chapters cover the physiological bases of vision loss and

the fundamentals of orientation, mobility, and information access for blind and low vision individuals. They discuss technology for multiple applications (mobility, wayfinding, information access, education, work, entertainment), including both established technology and cutting-edge research. The book also examines computer and digital media access and the scientific basis for the theory and practice of sensory substitution. This volume provides a holistic view of the elements to consider when designing assistive technology for persons with visual impairment, keeping in mind the need for a user-driven approach to successfully design products that are easy to use, well priced, and fill a specific need. Written for a broad audience, this book provides a comprehensive overview and in-depth descriptions of current technology for designers, engineers, practitioners, rehabilitation professionals, and all readers interested in the challenges and promises of creating successful assistive technology.

Daisy Daisy Whalen Bazzett, 2021-09-13 The Great Depression was a time of extreme deprivation for many. Widespread unemployment, hunger and poverty were the norm. But not everyone was so desperately poor in those dark days. Daisy Whalen was one of the lucky ones, just starting college in

1932. Only sixteen and fiercely intelligent, she'd earned a scholarship to Central State Teachers College in Mount Pleasant, Michigan. Unsophisticated and innocent, she floundered socially at first, but then, in the summer of '33, she caught the eye of a new man in town. Ellis Bazzett was the young manager of the bean and grain elevator in her hometown of Oakley. Despite a six-year age difference, Ellis and Daisy were soon a couple; and a correspondence - and courtship - that would cover four eventful, turbulent years began. Ellis took a new job as a traveling salesman for General Mills, so it was a largely long-distance romance, but they got together as often as they could, and wrote each other faithfully and frequently. Only Daisy's letters survive, but they provide a vivid portrait of college and small-town life in the 1930s, as well as an intimate look into the ups and downs of their ever-deepening relationship. Excerpts from her diaries and journals over the years that followed, and an unfinished memoir she wrote in her nineties, offer further insights into a love story that endured for more than fifty years, and the life and family that grew out of it. Filled with the joys and sorrows of the daily life of an extraordinary woman who all her life treasured books and learning and loved to read, here, finally, is Daisy's book.
