Compounded Topical Pain Creams National Academies of Sciences, Engineering, and Medicine,Health and Medicine Division,Board on Health Sciences Policy,Committee on the Assessment of the Available Scientific Data Regarding the Safety and Effectiveness of Ingredients Used in Compounded Topical Pain Creams,2020-07-21 Pain is both a symptom and a disease. It manifests in multiple forms and its treatment is complex. Physical, social, economic, and emotional consequences of pain can impair an individual's overall health, well-being, productivity, and relationships in myriad ways. The impact of pain at a population level is vast and, while estimates differ, the Centers for Disease Control and Prevention reported that 50 million U.S. adults are living in pain. In terms of pain's global impact, estimates suggest the problem affects approximately 1 in 5 adults across the world, with nearly 1 in 10 adults newly diagnosed with chronic pain each year. In recent years, the issues surrounding the complexity of pain management have contributed to increased demand for alternative strategies for treating pain. One such strategy is to expand use of topical pain medications—medications applied to intact skin. This nonoral route of administration for pain medication has the potential benefit, in theory, of local activity and fewer systemic side effects. Compounding is an age-old pharmaceutical practice of combining, mixing, or adjusting ingredients to create a tailored medication to meet the needs of a patient. The aim of compounding, historically, has been to provide patients with access to therapeutic alternatives that are safe and effective, especially for people with clinical needs that cannot otherwise be met by commercially available FDA-approved drugs. Compounded Topical Pain Creams explores issues regarding the safety and effectiveness of the ingredients in these pain creams. This report analyzes the available scientific data relating to the ingredients used in compounded topical pain creams and offers recommendations regarding the treatment of patients.

Safe and Effective Medicines for Children Institute of Medicine,Board on Health Sciences Policy,Committee on Pediatric Studies Conducted Under the Best Pharmaceuticals for Children Act (BPCA) and the Pediatric Research Equity Act (PREA),2012-10-13 The Best Pharmaceuticals for Children Act (BPCA) and the Pediatric Research Equity Act (PREA) were designed to encourage more pediatric studies of drugs used for children. The FDA asked the IOM to review aspects of pediatric studies and changes in product labeling that resulted from BPCA and PREA and their predecessor policies, as well as assess the incentives for pediatric studies of biologics and the extent to which biologics have been studied in children. The IOM committee concludes that these policies have helped provide clinicians who care for children with better information about the efficacy, safety, and appropriate prescribing of drugs. The IOM suggests that more can be done to increase knowledge about drugs used by children and thereby improve the clinical care, health, and well-being of the nation's children.

Description and Analysis of the VA National Formulary Institute of Medicine,Division of Health Care Services,VA Pharmacy Formulary Analysis Committee,2000-11-03 The VA National Formulary generated controversy, which motivated congressional scrutiny and a directive to the VA to commission this report reviewing the experience with the National Formulary and formulary system. This Institute of Medicine committee was pleased to assist the Congress with this review, in part because the committee saw in the VHA example an opportunity to understand and anticipate problems that all publicly funded programs are likely to encounter in this new age of pharmaceuticals. The Congress asked the committee to review the restrictiveness of the National Formulary, its impact on the costs and quality of care in the VHA, and how it compared to formularies and drug management practices in the private sector and in other public programs, especially Medicaid. Detailed in the pages that follow, the committee's findings and conclusions on these questions are, the committee believes, highly instructive, though not always in the ways that we anticipated.

The Myth of Autism Michael J. Goldberg,2014-07-29 Experts agree that America is in the midst of a disturbing epidemic of what has thus far been diagnosed as autism. In just thirty years autism diagnoses have risen from 1 in 5,000 children to 1 in 110, according to the Centers for Disease Control and Prevention. But in the history of our society there has never been an “epidemic” of any developmental or genetic disorder—it is scientifically impossible. So what is this mysterious affliction known as “autism,” and how can we stop it? Dr. Goldberg and his colleagues illustrate why autism cannot be genetic, but is a symptom of a treatable neurological disease that attacks the brain’s immune system. Readers will come to understand that Autism is not psychological or developmental, but a medical disease, Autism is caused by a dysfunction in the neuro-immune system and often by secondary neurotropic viruses that impact the neuro-immune system and brains, illnesses such as autism, ADD/ADHD, and chronic fatigue syndrome all have different “labels” but are actually variations on the same thing: neuro-immune dysfunction syndromes (NIDS), and what you can do to transform your own life or the lives of your loved ones. Dr. Goldberg's knowledge base is greater than anyone else's in this treatment area. He is the best expert in this field, in my opinion. I could have taken my son to any autism doctor in the world and I chose Dr. Goldberg. --Bruce L. Russell, MD, FAAFP
