Shy Spaghetti and Excited Eggs Marc A. Nemiroff,Jane Annunziata,2011-05-15 Kids often find it hard to express their feelings in constructive ways, enjoy their "good feelings," and cope with their unpleasant emotions as well. Learning to label feelings is an important first step to being able to do that difficult work of expressing, enjoying, and coping. Shy Spaghetti and Excited Eggs includes an array of the basic feelings that younger children experience, both the easier feelings such as excitement and the harder feelings such as anger. Kids will enjoy this playful reference book and learn to recognize and identify their own emotions. And importantly, kids will know what to do when their feelings get too big or out of control. Also included is a Note to Parents with additional information and tools to help parents help their children through the sometimes confusing but wonderful world of emotions. Understanding what emotions and feelings are telling you about yourself is very useful, especially for kids!

Dark Ecology Timothy Morton,2016-04-12 Timothy Morton argues that ecological awareness in the present Anthropocene era takes the form of a strange loop or Möbius strip, twisted to have only one side. Deckard travels this oedipal path in Blade Runner (1982) when he learns that he might be the enemy he has been ordered to pursue. Ecological awareness takes this shape because ecological phenomena have a loop form that is also fundamental to the structure of how things are. The logistics of agricultural society resulted in global warming and hardwired dangerous ideas about life-forms into the human mind. Dark ecology puts us in an uncanny position of radical self-knowledge, illuminating our place in the biosphere and our belonging to a

species in a sense that is far less obvious than we like to think. Morton explores the logical foundations of the ecological crisis, which is suffused with the melancholy and negativity of coexistence yet evolving, as we explore its loop form, into something playful, anarchic, and comedic. His work is a skilled fusion of humanities and scientific scholarship, incorporating the theories and findings of philosophy, anthropology, literature, ecology, biology, and physics. Morton hopes to reestablish our ties to nonhuman beings and to help us rediscover the playfulness and joy that can brighten the dark, strange loop we traverse.

Unity of Mission Melanne A Civic, Air University Press, Jon Gundersen, 2019-07-20 While much has been written about civilian-military teams in Vietnam and, most recently, in Iraq and Afghanistan, the subject has not been addressed in a single, comprehensive publication containing historical context and reflecting a broad diversity of views. It is the intention of the coeditors of *Unity of Mission* to fill this gap. The authors are convinced that without unity among military and civilian actors, long-term mission success is difficult at best. They believe the essays contained in this volume attest to this assertion. They are also fully aware that civilian-military teams are not a silver bullet. Rather, at best, such teams serve as a useful tool in a more comprehensive security framework. Nevertheless, in an age of budgetary constraints, the need to coordinate military and civilian resources—hard, kinetic, and soft power—is clear. It is the opinion of the coeditors that civilian-military teams are critical to achieving the goals of sustainable peace, stability, and security.

Songs in the Key of Z Irwin Chusid, 2000 Irwin Chusid profiles a number of outsider musicians – those who started as outside and eventually came in when the listening public caught up with their radical ideas. Included are The Shaggs, Tiny Tim, Syd Barrett, Joe Meek, Captain Beefheart, The Cherry Sisters, Daniel Johnston, Harry Partch, Wesley Willis, and others.

Invisible Sun Charles Stross, 2021-09-28 The alternate timelines of Charles Stross' *Empire Games* trilogy have never been so entangled than in *Invisible Sun*—the techno-thriller follow up to *Dark State*—as stakes escalate in a conflict that could spell extermination for humanity across all known timelines. An inter-timeline coup d'état gone awry. A renegade British monarch on the run through the streets of Berlin. And robotic alien invaders from a distant timeline flood through a wormhole, wreaking havoc in the USA. Can disgraced worldwalker Rita and her intertemporal extraordinary agent of a mother neutralize the livewire contention before it's too late? Experimenting on a Small Planet William W. Hay, 2012-12-13 This book is a thorough introduction to climate science and global change. The author is a geologist who has spent much of his life investigating the climate of Earth from a time when it was warm and dinosaurs roamed the land, to today's changing climate. Bill Hay takes you on a journey to understand how the climate system works. He explores how humans are unintentionally conducting a grand uncontrolled experiment which is leading to unanticipated changes. We follow the twisting path of seemingly unrelated discoveries in physics, chemistry, biology, geology, and even mathematics to learn how they led to our present knowledge of how our planet works. He explains why the weather is becoming increasingly chaotic as our planet warms at a rate far faster than at any time in its geologic past. He speculates on possible future outcomes,

and suggests that nature itself may make some unexpected course corrections. Although the book is written for the layman with little knowledge of science or mathematics, it includes information from many diverse fields to provide even those actively working in the field of climatology with a broader view of this developing drama. *Experimenting on a Small Planet* is a must read for anyone having more than a casual interest in global warming and climate change – one of the most important and challenging issues of our time.

Adaptive Strategies for Water Heritage Carola Hein, 2019-10-18 This Open Access book, building on research initiated by scholars from the Leiden-Delft-Erasmus Centre for Global Heritage and Development (CHGD) and ICOMOS Netherlands, presents multidisciplinary research that connects water to heritage. Through twenty-one chapters it explores landscapes, cities, engineering structures and buildings from around the world. It describes how people have actively shaped the course, form and function of water for human settlement and the development of civilizations, establishing socio-economic structures, policies and cultures; a rich world of narratives, laws and practices; and an extensive network of infrastructure, buildings and urban form. The book is organized in five thematic sections that link practices of the past to the design of the present and visions of the future: part I discusses drinking water management; part II addresses water use in agriculture; part III explores water management for land reclamation and defense; part IV examines river and coastal planning; and part V focuses on port cities and waterfront regeneration. Today, the many complex systems of the past are necessarily the basis for new systems that both preserve the past and manage water today: policy makers and designers can work together to recognize and build on the traditional knowledge and skills that old structure embody. This book argues that there is a need for a common agenda and an integrated policy that addresses the preservation, transformation and adaptive reuse of historic water-related structures. Throughout, it imagines how such efforts will help us develop sustainable futures for cities, landscapes and bodies of water.
