The Psychology of Fake News Rainer Greifeneder,Mariela Jaffe,Eryn Newman,Norbert Schwarz,2020-08-13 This volume examines the phenomenon of fake news by bringing together leading experts from different fields within psychology and related areas, and explores what has become a prominent feature of public discourse since the first Brexit referendum and the 2016 US election campaign. Dealing with misinformation is important in many areas of daily life, including politics, the marketplace, health communication, journalism, education, and science. In a general climate where facts and misinformation blur, and are intentionally blurred, this book asks what determines whether people accept and share (mis)information, and what can be done to counter misinformation? All three of these aspects need to be understood in the context of online social networks, which have fundamentally changed the way information is produced, consumed, and transmitted. The contributions within this volume summarize the most up-to-date empirical findings, theories, and applications and discuss cutting-edge ideas and future directions of interventions to counter fake news. Also providing guidance on how to handle misinformation in an age of “alternative facts”, this is a fascinating and vital reading for students and academics in psychology, communication, and political science and for professionals including policy makers and journalists.

Social Metacognition Pablo Briñol, Kenneth DeMarree, 2012-04-27 Metacognition refers to thinking about our own thinking. It has assumed a prominent role in social judgment because our thoughts about our thoughts can magnify, attenuate, or even reverse the impact of primary cognition. Metacognitive thoughts can also produce changes in thought, feeling, and behavior, and thus are critical for a complete understanding of human social behavior. The present volume presents the most important and advanced research areas in social psychology where the role of metacognition has been studied. Specifically, the chapters of this book are organized into four substantive content areas: Attitudes and Decision Making, Self and Identity, Experiential, and Interpersonal. Each section consists in several chapters summarizing much of the work done in recent decades on critical topics, such as attitude strength, persuasion, bias correction, self-regulation, subjective feelings, embodiment, and prejudice, among others. This book also emphasizes interpersonal aspects of metacognition as they play an essential role in close relationships, groups, consumer and clinical interactions. Each chapter is written by an expert in the field, and presents a state-of-the-art view of the many ways metacognition has been examined by social psychologists.

Providing practical guidance in a succinct and accessible format, this book covers the most common neurodevelopmental, behavioral and cognitive disorders, including but not limited to ADHD, cerebral palsy, traumatic brain injury, and epilepsy. Key points concerning the practice of developmental neuropsychology are emphasized in order to aid understanding of neuropsychological development and its impact on behavior, emotion, cognition, and social integration. This will be essential reading for advanced graduate students and early career professionals in the fields of neuropsychology, pediatric psychology, clinical psychology, school psychology, and rehabilitation psychology, as well as practitioners in the allied fields that interact with neuropsychology.

Persuasive Imagery Linda M. Scott, Rajeev Batra, 2003-04-02 This volume synthesizes and advances existing knowledge of consumer response to visuals. Representing an interdisciplinary perspective, contributors include scholars from the disciplines of communication, psychology, and marketing. The book begins with an overview section intended to situate the reader in the discourse. The overview describes the state of knowledge in both academic research and actual practice, and provides concrete sources for scholars to pursue. Written in a non-technical language, this volume is divided into four sections: Image and Response - illustrates the difficulty encountered even in investigating the basic influences, processes, and effects of mere exposure to imagery. Image and Word - presents instances in which the line between words and pictures is blurred, such as the corporate logo which is often pictorial in nature but communicates on an abstract level usually attributed to words. Image and the Ad - contributes to our appreciation for the exquisite variations among advertising texts and the resultant variability in response, not only to different ads but among different viewers of the same ad. Image and Object - carries the inquiry of visual response over the bridge toward object interaction. Having traveled a path that has gone from the precise working of the brain in processing visual stimuli all the way to the history of classical architecture, readers of this volume will have a new respect for the complexity of human visual response and the research that is trying to explain it. It will be of interest to those involved in consumer behavior, consumer psychology, advertising, marketing, and visual communication.

The Psychology Behind Trademark Infringement and Counterfeiting J. L. Zaichkowsky, 2020-04-01 As those involved in commerce are aware, preventing competitors and others from imitating successful brands is a difficult and costly task. This book serves to inform the reader concerning complexities of the issues of brand imitation, integrating the disciplines of psychology, business, and law to the area of trademark infringement and counterfeiting. Principles and theories from psychology and how they are relevant to consumers' perceptions in the marketplace are used to explain why competitors steal the intellectual property of another company or entity. The possibility of brand imitation or counterfeiting should be contemplated in designing new products or brand packaging, just as it is in the printing of currency. It is the intent of *The Psychology Behind Trademark Infringement and Counterfeiting* to provide those involved in commerce with some understanding, some ideas, and perhaps some strategy for building differentiated brands that are easy to protect. Brand managers, expert witnesses to trademark cases, intellectual property lawyers, and academics of consumer behavior and marketing will find this book useful to understanding consumer motives and processes of trademark infringement and counterfeiting. It could be used as a textbook in courses on marketing.

Sports-Related Concussions in Youth National Research Council, Institute of Medicine, Board on Children, Youth, and Families, Committee on Sports-Related Concussions in Youth, 2014-02-04 In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. *Sports-Related Concussions in Youth: Improving the Science, Changing the Culture* reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. *Sports-Related Concussions in Youth* finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to *Sports-Related Concussions in Youth*, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.
