Remaking Regional Economies Susan Christopherson, Jennifer Clark, 2020-08-18 Winner of the 2009 Regional Studies Association Best Book Award! Since the early 1980s, the region has been central to thinking about the emerging character of the global economy. In fields as diverse as business management, industrial relations, economic geography, sociology, and planning, the regional scale has emerged as an organizing concept for interpretations of economic change. This book is both a critique of the new regionalism and a return to the regional question, including all of its concerns with equity and uneven development. It will challenge researchers and students to consider the region as a central scale of action in the global economy, and at the core of the book are case studies of two industries that rely on skilled, innovative, and flexible workers - the optics and imaging industry and the film and television industry. Combined with this is a discussion of the regions that constitute their production centers. The authors' intensive research on photonics and entertainment media firms, both large and small, leads them to question some basic assumptions behind the new regionalism and to develop an alternative framework for understanding regional economic development policy. Finally, there is a re-examination of what the regional question means for the concept of the learning region. This book draws on the rich contemporary literature on the region but also addresses theoretical questions that preceded the new regionalism. It will contribute to teaching and research in a range of social science disciplines and this new paperback edition will also make the book more accessible to students and researchers in those disciplines, those individuals who will influence the re-structuring economies of the 21st century.

The Encyclopedia of New York State Peter Eisenstadt, 2005-05-19 The Encyclopedia of New York State is one of the most complete works on the Empire State to be published in a half-century. In nearly 2,000 pages and 4,000 signed entries, this single volume captures the impressive complexity of New York State as a historic crossroads of people and ideas, as a cradle of abolitionism and feminism, and as an apex of modern urban, suburban, and rural life. The Encyclopedia is packed with fascinating details from fields ranging from sociology and geography to history. Did you know that Manhattan's Lower East Side was once the most populated neighborhood in the world, but Hamilton County in the Adirondacks is the least densely populated county east of the Mississippi; New York is the only state to border both the Great Lakes and the Atlantic Ocean; the Erie Canal opened New York City to rich farmland upstate . . . and to the west. Entries by experts chronicle New York's varied areas, politics, and persuasions with a cornucopia of subjects from environmentalism to higher education to railroads, weaving the state's diverse regions and peoples into one idea of New York State. Lavishly illustrated with 500 photographs and figures, 120 maps, and 140 tables, the Encyclopedia is key to understanding the state's past, present, and future. It is a crucial reference for students, teachers, historians, and business people, for New Yorkers of all persuasions, and for anyone interested in finding out more about New York State.

The Human and Environmental Impact of Fracking Madelon L. Finkel, 2015-03-24 Fracking for gas trapped in shale could be a game changer in the quest to find alternatives to dirty fossil fuels, but it also has potential for harm. This book provides one-stop shopping for everyone who wants to know more about the issues. Oil and gas account for a large percentage of the world's energy consumption, and the search for new ways to extract both from the earth is a global quest. Fracking is viewed as an energy game-changer but is a controversial topic about which there is much misunderstanding. This unbiased work was written to bring clarity to the issues. Under the guidance of an internationally recognized public health expert, this book provides a comprehensive look at unconventional natural gas development from many different perspectives. Written for the layperson, the book dispels myths surrounding fracking, corrects misconceptions, and offers impartial, scientifically based information on both benefits and challenges. Readers will learn about the effects fracking has on the environment—our water, air, and climate—as well as on human and animal health. The contributors also look at the economics of fracking and at its socioeconomic impact on local communities and nations. They discuss legal and ethical issues related to the practice and, in keeping with the intent to provide a fair and balanced overview, share the industry perspective as well.

The Learning Region Roel Rutten, Frans Boekema, 2007 Introduces the learning region as a theory to explain how regional actors perform regional learning. This title presents a discussion of concepts such as regional networks and social capital. It focuses on learning between regional actors and the relations they have with one another and with other actors in their social context.

Cross-border Cultural Production Janet Wasko, 2008 This volume addresses issues revolving around the production of mediated cultural products across borders. More specifically, the authors consider cross-border cultural production in the film and television industries and how it affects and is affected by media centers, and, more recently, established production locations. The film and television industries have long been recognized as playing important economic, political and cultural roles. And while it could be argued that, historically, these forms of cultural production often have been international endeavors, the choice of production sites has become an especially contentious issue during the last few decades as global production has expanded. While some factions, notably from the US film and television industries, refer to this issue as runaway production, this book takes a much broader look at the implications and consequences of this phenomenon. Basically, cross-border production involves the expansion of production away from traditional centers, whether to other countries or to other locations within the same country. Thus, this study covers a wide range of issues involving economic and political considerations, as well as creative and aesthetic decision-making.

Net Working Rosemary L. Batt, 2001 A study was made of the labor market issues facing professionals and employers in the new media industry, an industry that combines elements of computing technology, telecommunications, and content to create products and services that can be used interactively by consumers and business owners. The study was carried out through a Web-based survey of members of five intermediary associations that serve workers in the industry. The study focused on a group of highly accomplished professionals in New York City to identify lessons for success in a project-oriented environment with highly complex skill demands and rapidly changing technology. The study found that the professionals surveyed earned an average of \$99,000 from new media work in 1999, far more than the national average for people employed in this area. Yet they faced significant challenges in acquiring new skills, managing their careers, and establishing employment and income security. They spent an average of 13.5 hours per week in unpaid time learning new skills and more than 6 hours per week in looking for employment. The researchers concluded that challenges for the industry include establishing criteria for evaluating job skills and creating ways for professionals to acquire more training and find jobs or projects in less time. Research methodology is appended. (Contains 14 references, 13 figures, and 7 tables.) (KC)

The Encyclopedia of New York The Editors of New York Magazine, 2020-10-20 The must-have guide to pop culture, history, and world-changing ideas that started in New York City, from the magazine at the center of it all. Since its founding in 1624, New York City has been a place that creates things. What began as a trading post for beaver pelts soon transformed into a hub of technological, social, and cultural innovation—but beyond fostering literal inventions like the elevator (inside Cooper Union in 1853), Q-tips (by Polish immigrant Leo Gerstenzang in 1923), General Tso's chicken (reimagined for American tastes in the 1970s by one of its Hunanese creators), the singles bar (1965 on the Upper East Side), and Scrabble (1931 in Jackson Heights), the city has given birth to or perfected idioms, forms, and ways of thinking that have changed the world, from Abstract Expressionism to Broadway, baseball to hip-hop, news blogs to neoconservatism to the concept of "downtown." Those creations and more are all collected in The Encyclopedia of New York, an A-to-Z compendium of unexpected origin stories, hidden histories, and useful guides to the greatest city in the world, compiled by the editors of New York Magazine (a city invention itself, since 1968) and featuring contributions from Rebecca Traister, Jerry Saltz, Frank Rich, Jonathan Chait, Rhonda Garelick, Kathryn VanArendonk, Christopher Bonanos, and more. Here you will find something fascinating and uniquely New York on every page: a history of the city's skyline, accompanied by a tour guide's list of the best things about every observation deck; the development of positive thinking and punk music; appreciations of seltzer and alternate-side-of-the-street parking; the oddest object to be found at Ripley's Believe It or Not!; musical theater next to muckracking and mugging; and the unbelievable revelation that English muffins were created on...West Twentieth Street. Whether you are a lifelong resident, a curious newcomer, or an armchair traveler, this is the guidebook you'll need, straight from the people who know New York best.
