Living in a Nuclear World Bernadette Bensaude-Vincent, Soraya Boudia, Kyoko Sato, 2022-03-10 The Fukushima disaster invites us to look back and probe how nuclear technology has shaped the world we live in, and how we have come to live with it. Since the first nuclear detonation (Trinity test) and the bombings of Hiroshima and Nagasaki, all in 1945, nuclear technology has profoundly affected world history and geopolitics, as well as our daily life and natural world. It has always been an instrument for national security, a marker of national sovereignty, a site of technological innovation and a promise of energy abundance. It has also introduced permanent pollution and the age of the Anthropocene. This volume presents a new perspective on nuclear history and politics by focusing on four interconnected themes—violence and survival; control and containment; normalizing through denial and presumptions; memories and futures—and exploring their relationships and consequences. It proposes an original reflection on nuclear technology from a long-term, comparative and transnational perspective. It brings together contributions from researchers from different disciplines (anthropology, history, STS) and countries (US, France, Japan) on a variety of local, national and transnational subjects. Finally, this book offers an important and valuable insight into other global and Anthropocene challenges such as climate change.

Research Opportunities for Deactivating and Decommissioning Department of Energy Facilities

National Research Council, Division on Earth and Life Studies, Board on Radioactive Waste Management, Committee on Long-Term Research Needs for Deactivation and Decommissioning at Department of Energy Sites,2001-08-31 When the Cold War abruptly ended, DOE halted most nuclear materials production. In 1995, Congress chartered DOE's Environmental Management Science Program (EMSP) to bring the nation's scientific infrastructure to bear on EM's most difficult, long-term cleanup challenges. The EMSP provides grants to investigators in industry, national laboratories, and universities to undertake research that may help address these cleanup challenges. On several occasions the EMSP has asked the National Academies for advice on developing its research agenda. This report resulted from a 15-month study by an Academies committee on long-term research needs for deactivation and decommissioning (D&D) at DOE sites.

Space Law Francis Lyall, Paul B. Larsen,2016-04-01 The opening of space to exploration and use has had profound effects on society. Remote sensing by satellite has improved meteorology, land use and the monitoring of the environment. Satellite television immediately informs us visually of events in formerly

remote locations, as well as providing many entertainment channels. World telecommunication facilities have been revolutionised. Global positioning has improved transport. This book examines the varied elements of public law that lie behind and regulate the use of space. It also makes suggestions for the development and improvement of the law, particularly as private enterprise plays an increasing role in space.

Condensed Matter Nuclear Science,

The Upper Room and Tomb of David David Christian Clausen, 2016-04-25 It has been a church, a mosque and a synagogue. Jesus is said to have dined there. James, his brother, is believed to have been interred there. King David may be buried beneath its floor. The subject of intense speculation by both scholars and the faithful, the Cenacle on Mount Zion—also known as the Upper Room of the New Testament gospels and as the Tomb of David—has remained a mystery for centuries. Claimed by Jews, Christians and Muslims, the sacred structure continues to evoke passionate controversy. Does it date back to the time of Christ? Was the Last Supper celebrated there? Is this the place where the Holy Spirit descended on the apostles on the first Pentecost following Easter Sunday? Did King David's remains ever lie there? These and many other questions are explored in this first-ever study, offering a readable, fully researched narrative account of the Cenacle's history, archaeology and imagery. Artistic, architectural and photographic illustrations document the Cenacle and its surroundings over the past 1,500 years.

Knowing Good Schools Dorothy Anne Warner, William D. Guthrie, 2001-05-30 The authors provide an instructional guide to evaluating public high schools utilizing school effectiveness research and statistical educational data. The historical background of public high schools in the United States includes the fundamental purposes of a public high school education and a discussion of the current educational trends at the high school level. A comprehensive synthesis of the effective schools literature is summarized with recommended categories to consider when assessing the effectiveness of a school. The work includes a guide to the identification and effective use of sources for educational data. An extensive, practical guide to on-site school assessment includes suggested questions and observations to make during an assessment process. Three case studies further demonstrate the assessment process. The reference work is intended for parents seeking a good high school for their children, educators (including teacher educators, principals, teachers, and others wishing to improve their schools), and citizens who are interested in promoting education's position within our society.
