Managing Ocean Environments in a Changing Climate Kevin J. Noone,Ussif Rashid Sumaila,Robert J. Diaz,2013-06-29 Managing Ocean Environments in a Changing Climate summarizes the current state of several threats to the global oceans. What distinguishes this book most from previous works is that this book begins with a holistic, global-scale focus for the first several chapters and then provides an example of how this approach can be applied on a regional scale, for the Pacific region. Previous works usually have compiled local studies, which are essentially impossible to properly integrate to the global scale. The editors have engaged leading scientists in a number of areas, such as fisheries and marine ecosystems, ocean chemistry, marine biogeochemical cycling, oceans and climate change, and economics, to examine the threats to the oceans both individually and collectively, provide gross estimates of the economic and societal impacts of these threats, and deliver high-level recommendations. Nominated for a Katerva Award in 2012 in the Economy category State of the science reviews by known marine experts provide a concise, readable presentation written at a level for managers and students Links environmental and economic aspects of ocean threats and provides an economic analysis of action versus inaction Provides recommendations for stakeholders to help stimulate the development of policies that would help move toward sustainable use of marine resources and services

Essentials of Interventional Cancer Pain Management Amitabh Gulati,Vinay Puttanniah,Brian M. Bruel,William S. Rosenberg,Joseph C. Hung,2018-12-28 This text provides a comprehensive review and expertise on various interventional cancer pain procedures. The first part of the text addresses the lack of consistency seen in the literature regarding interventional treatment options for specific cancer pain syndromes. Initially, it discusses primary cancer and treatment-related cancer pain syndromes that physicians may encounter when managing cancer patients. The implementation of paradigms that can be used in treating specific groups of cancer such as breast cancer, follows. The remainder of the text delves into a more common approach to addressing interventional cancer pain medicine. After discussing interventional options that are commonly employed by physicians, the text investigates how surgeons may address some of the more severe pain syndromes, and covers the most important interventional available for our patients, intrathecal drug delivery. Chapters also cover radiologic options in targeted neurolysis and ablative techniques, specifically for bone metastasis, rehabilitation to address patients' quality of life and function, and integrative and psychological therapies. Essentials of Interventional Cancer Pain Management globally assesses and addresses patients' needs throughout the cancer journey. Written by experts in the field, and packed with copious tables, figures, and flow charts, this book is a must-have for pain physicians, residents, and fellows.

Backcountry Revolutionary William T. Graves,2012-12 Biography of Col. James Williams, 1740-1780, the highest ranking officer who died from wounds suffered at the Battle of Kings Mountain (October 7, 1780) during the American Revolutionary War.

The Great American Biotic Interchange Alberto Luis Cione,Germán Mariano Gasparini,Esteban Soibelzon,Leopoldo Héctor Soibelzon,Eduardo Pedro Tonni,2015-04-24 South American ecosystems suffered one of the greatest biogeographical events, after the establishment of the Panamanian land bridge, called the "Great American Biotic Interchange" (GABI). This refers to the exchange, in several phases, of land mammals between the Americas; this event started during the late Miocene with the appearance of the Holarctic Procyonidae (Huayquerian Age) in South America and continues today. The major phases of mammalian dispersal occurred from the Latest Pliocene (Marplatan Age) to the Late Pleistocene (Lujanian Age). The most important and richest localities of Late Miocene-Holocene fossil vertebrates of South America are those of the Pampean region of Argentina. There are also several Late Miocene and Pliocene localities in western Argentina and Bolivia. Other important fossils have been collected in localities of Pleistocene age outside Argentina: Tarija (Bolivia), karstic caves of Lagoa Santa and the recently explored caves of Tocantins (Brasil),

Talara (Perú), La Carolina (Ecuador), Muaco (Venezuela), and Cueva del Milodon (Chile), among others. The book discusses basic information for interpreting the GABI such as taxonomic composition (incorporating the latest revisions) at classical and new localities for each stage addressing climate, environments, and time boundaries for each stage. It includes the chronology and dynamics of the GABI, the integration of South American mammalian faunas through time, the Quaternary mammalian extinctions and the composition of recent mammalian fauna of the continent.

Relict Species Jan Christian Habel, Thorsten Assmann, 2009-12-03 Mankind has evolved both genetically and culturally to become a most successful and dominant species. But we are now so numerous and our technology is so powerful that we are having major effects on the planet, its environment, and the biosphere. For some years prophets have warned of the possible detrimental consequences of our activities, such as pollution, deforestation, and overfishing, and recently it has become clear that we are even changing the atmosphere (e. g. ozone, carbon dioxide). This is worrying since the planet's life systems are involved and dependent on its functioning. Current climate change – global warming – is one recognised consequence of this larger problem. To face this major challenge, we will need the research and advice of many disciplines – Physics, Chemistry, Earth Sciences, Biology, and Sociology – and particularly the commitment of wise politicians such as US Senator Al Gore. An important aspect of this global problem that has been researched for several decades is the loss of species and the impoverishment of our ecosystems, and hence their ability to sustain themselves, and more particularly us! Through evolutionary time new species have been generated and some have gone extinct. Such extinction and regeneration are moulded by changes in the earth's crust, atmosphere, and resultant climate. Some extinctions have been massive, particularly those associated with catastrophic meteoric impacts like the end of the Cretaceous Period 65Mya.

Treatment of Chronic Pain by Interventional Approaches Timothy R. Deer, Michael S. Leong, Asokumar Buvanendran, Philip S. Kim, Sunil J. Panchal, 2014-12-08 From reviews of Deer, eds., *Comprehensive Treatment of Chronic Pain by Medical, Interventional, and Integrative Approaches*: *Comprehensive Treatment of Chronic Pain by Medical, Interventional, and Integrative Approaches* is a major textbook... [I]t should be a part of all departmental libraries and in the reference collection of pain fellows and pain practitioners. In fact, this text could be to pain as Miller is to general anesthesia. *Journal of Neurosurgical Anesthesiology* Edited by master clinician-experts appointed by the American Academy of Pain Medicine, this is a soft cover version of the Interventional sections of the acclaimed Deer, eds., *Comprehensive Treatment of Chronic Pain by Medical, Interventional, and Integrative Approaches*. It is intended as a primary reference for busy clinicians who seek up-to-date and authoritative information about interventional approaches to treating chronic pain. State-of-the-art coverage of full range of techniques: neural blockades, neurolysis blocks, and neurostimulation Review of clinically relevant anatomy and physiology Key Points preview contents of each chapter

Global Gangs Jennifer M. Hazen, Dennis Rodgers, 2014-08-01 Gangs, often associated with brutality and senseless destructive violence, have not always been viewed as inherently antagonistic. The first studies of gangs depicted them as alternative sources of order in urban slums where the state's authority was lacking, and they have subsequently been shown to be important elements in some youth life cycles. Despite their proliferation there is little consensus regarding what constitutes a gang. Used to denote phenomena ranging from organized crime syndicates to groups of youths who gather spontaneously on street corners, even the term "gang" is ambiguous. *Global Gangs* offers a greater understanding of gangs through essays that investigate gangs spanning across nations, from Brazil to Indonesia, China to Kenya, and from El Salvador to Russia. Volume editors Jennifer M. Hazen and Dennis Rodgers bring together contributors who examine gangs from a comparative perspective, discussing such topics as the role the apartheid regime in South Africa played in the emergence of gangs, the politics behind child vigilante squads in India, the relationship

between immigration and gangs in France and the United States, and the complex stigmatization of youths in Mexico caused by the arbitrary deployment of the word “gang.” Featuring an afterword by renowned U.S. gang researcher Sudhir Venkatesh, this volume provides a comprehensive look into the experience of gangs across the world and in doing so challenges conventional notions of identity. What is "college-level Writing"? Patrick Sullivan, Howard B. Tinberg, Sheridan D. Blau, 2010 A sequel to *What Is College-Level Writing?* (2006), the essays in this collection focus on matters that English teachers concern themselves with every day: assignments, readings, and real student writing.

The Death of the West Patrick J. Buchanan, 2010-04-01 The national bestseller that shocked the nation--The Death of the West is an unflinching look at the increasing decline in Western culture and power. The West is dying. Collapsing birth rates in Europe and the U. S., coupled with population explosions in Africa, Asia and Latin America are set to cause cataclysmic shifts in world power, as unchecked immigration swamps and polarizes every Western society and nation. The Death of the West details how a civilization, culture, and moral order are passing away and foresees a new world order that has terrifying implications for our freedom, our faith, and the preeminence of American democracy. The Death of the West is a timely, provocative study that asks the question that quietly troubles millions: Is the America we grew up in gone forever?

The Selling of 9/11 D. Heller, 2016-09-23 The Selling of 9/11 argues that the marketing and commodification of the terrorist attacks of September 11, 2001, reveal the contradictory processes by which consumers in the United States (and around the world) use, communicate, and construct national identity and their sense of national belonging through cultural and symbolic goods. Contributors illuminate these processes and make important connections between myths of nation, practices of mourning, theories of trauma, and the politics of post-9/11 consumer culture. Their essays take critical stock of the role that consumer goods, media and press outlets, commercial advertising, marketers and corporate public relations have played in shaping cultural memory of a national tragedy.

Wilt, 1962 Gary M. Pomerantz, 2010-06-02 On the night of March 2, 1962, in Hershey, Pennsylvania, right up the street from the chocolate factory, Wilt Chamberlain, a young and striking athlete celebrated as the Big Dipper, scored one hundred points in a game against the New York Knickerbockers. As historic and revolutionary as the achievement was, it remains shrouded in myth. The game was not televised; no New York sportswriters showed up; and a fourteen-year-old local boy ran onto the court when Chamberlain scored his hundredth point, shook his hand, and then ran off with the basketball. In telling the story of this remarkable night, author Gary M. Pomerantz brings to life a lost world of American sports. In 1962, the National Basketball Association, stepchild to the college game, was searching for its identity. Its teams were mostly white, the number of

black players limited by an unspoken quota. Games were played in drafty, half-filled arenas, and the players traveled on buses and trains, telling tall tales, playing cards, and sometimes reading Joyce. Into this scene stepped the unprecedented Wilt Chamberlain: strong and quick-witted, voluble and enigmatic, a seven-footer who played with a colossal will and a dancer's grace. That strength, will, grace, and mystery were never more in focus than on March 2, 1962. Pomerantz tracked down Knicks and Philadelphia Warriors, fans, journalists, team officials, other NBA stars of the era, and basketball historians, conducting more than 250 interviews in all, to recreate in painstaking detail the game that announced the Dipper's greatness. He brings us to Hershey, Pennsylvania, a sweet-seeming model of the gentle, homogeneous small-town America that was fast becoming anachronistic. We see the fans and players, alternately fascinated and confused by Wilt, drawn anxiously into the spectacle. Pomerantz portrays the other legendary figures in this story: the Warriors' elegant coach Frank McGuire; the beloved, if rumpled, team owner Eddie Gottlieb; and the irreverent p.a. announcer Dave "the Zink" Zinkoff, who handed out free salamis courtside. At the heart of the book is the self-made Chamberlain, a romantic cosmopolitan who owned a nightclub in Harlem and shrugged off segregation with a bebop cool but harbored every slight deep in his psyche. March 2, 1962, presented the awesome sight of Wilt Chamberlain imposing himself on a world that would diminish him. Wilt, 1962 is not only the dramatic story of a singular basketball game but a meditation on small towns, midcentury America, and one of the most intriguing figures in the pantheon of sports heroes. Drug-like Properties: Concepts, Structure Design and Methods Li Di, Edward H Kerns, 2010-07-26 Of the thousands of novel compounds that a drug discovery project team invents and that bind to the therapeutic target, typically only a fraction of these have sufficient ADME/Tox properties to become a drug product. Understanding ADME/Tox is critical for all drug researchers, owing to its increasing importance in advancing high quality candidates to clinical studies and the processes of drug discovery. If the properties are weak, the candidate will have a high risk of failure or be less desirable as a drug product. This book is a tool and resource for scientists engaged in, or preparing for, the selection and optimization process. The authors describe how properties affect in vivo pharmacological activity and impact in vitro assays. Individual drug-like properties are discussed from a practical point of view, such as solubility, permeability and metabolic stability, with regard to fundamental understanding, applications of property data in drug discovery and examples of structural modifications that have achieved improved property performance. The authors also review various methods for the screening (high throughput), diagnosis (medium throughput) and in-depth (low throughput) analysis of drug properties. Serves as an essential working handbook aimed at scientists and students in medicinal chemistry Provides practical, step-by-step guidance on property fundamentals, effects, structure-property relationships, and structure modification strategies Discusses improvements in pharmacokinetics from a practical chemist's standpoint

Composing Pictures Donald W. Graham, 2010-06-30 The principles of and approaches to composition have been intriguing and challenging subjects of study since the beginning of pictorial art. In this book both traditional and contemporary principles and approaches are explored and clearly explained. This lucid, insightful encyclopaedia of how pictures are put together, a classic in its field, is an invaluable book for long-term study, reference, and even browsing. A picture cannot be weighed, measured, and appraised like a sack of potatoes. This book avoids the discussion by dissection method of picture analysis, stressing instead the graphic forces that remain valid and essential regardless of how art forms and fashions may change. In thirty-five short chapters, each devoted to a single important concept, the author covers the basics and complexities of graphic

composition, including the illusion of depth, the enigma of surface, manifesting and symbolising force and motion, utilising borders, graphic accents, patterns, handling dark and light, directing the viewer's eye, and creating storyboards. These concepts are illustrated by hundreds of diagrams and the work of great artists from myriad historical ages, cultures, and styles. The book not only contains a section on film graphics, but also consistently reminds the reader that the principles of composition relate to the moving picture as well as the still picture.
