The Theory and Criticism of Virtual Texts Lory Hawkes, Joe Law, Christina Murphy, 2000-11-30 Virtual texts have emerged within the realm of the Internet as the predominant means of global communication. As both technological and cultural artifacts, they embody and challenge cultural assumptions and invite new ways of conceptualizing knowledge, community, identity, and meaning. But despite the pervasiveness of the Internet in nearly all aspects of contemporary life, no single resource has cataloged the ways in which numerous disciplines have investigated and critiqued virtual texts. This bibliography includes more than 1500 annotated entries for books, articles, dissertations, and electronic resources on virtual texts published between 1988 and 1999. Because of the multiple contexts in which virtual texts are studied, the bibliography addresses virtual communication across a broad range of disciplines and philosophies. It encompasses studies of the historical development of virtual texts; investigations of the many interdisciplinary applications of virtual texts and discussions of such legal issues as privacy and intellectual property. Entries are arranged alphabetically within topical chapters, and extensive indexes facilitate easy access.

Negotiating the North Alexandra Sanmark,Natascha Mehler,Sarah Semple,Frode Iversen,Halldis Hobæk,Marie ØDegaard,Alexis Tudor Skinner,2022-04-29 This book brings together the cumulative results of a three-year project focused on the assemblies and administrative systems of Scandinavia, Britain, and the North Atlantic islands in the 1st and 2nd millennia AD. In this volume we integrate a wide range of historical, cartographic, archaeological, field-based, and onomastic data pertaining to early medieval and medieval administrative practices, geographies, and places of assembly in Norway, Sweden, Denmark, Iceland, the Faroe Islands, Scotland, and eastern England. This transnational perspective has enabled a new understanding of the development of power structures in early medieval northern Europe and the maturation of these systems in later centuries under royal control. In a series of richly illustrated chapters, we explore the emergence and development of mechanisms for consensus. We begin with a historiographical exploration of assembly research that sets the intellectual agenda for the chapters that follow. We then examine the emergence and development of the thing in Scandinavia and its export to the lands colonised by the Norse. We consider more broadly how assembly practices may have developed at a local level, yet played a significant role in the consolidation, and at times regulation, of elite power structures. Presenting a fresh perspective on the agency and power of the thing and cognate types of local and regional assembly, this interdisciplinary volume provides an invaluable, in-depth insight into the people, places, laws, and consensual structures that shaped

the early medieval and medieval kingdoms of northern Europe.
