*Andrews Geyser* Stephen R. Little, 2012-08-01 What was that?!? DID I JUST SEE A GEYSER? Wait ... I just saw another one! No, that's not possible. We're on a train in the mountains, and ... There!! I SAW A THIRD ONE!! WHAT IS GOING ON?!? For almost 100 years, passengers rode trains from all over, going all over. When they rode the train on the mountain between Old Fort and Asheville in western North Carolina, they got a very special treat. Nestled at WNCRR mile marker 116, just below the series of six tunnels, is Andrews Geyser. The curvy tracks allowed several sneak previews, first on one side of the train, and then on the other! For decades, it has puzzled, bewildered and delighted people of all ages. What is it? ...When was it built?....Who was Andrew?....Why is it here?

*Volcano and Geothermal Tourism* Patricia Erfurt-Cooper, Malcolm Cooper, 2010-08-12 There are over 1300 active volcanoes worldwide and many more dormant or extinct. Some are developed as tourist destinations; others are not, but have great potential. Mount Fuji in Japan attracts over 100 million visitors per year and has immense cultural and spiritual significance, while a number of volcanic areas in national parks, for example Teide in Spain, Yellowstone in the US, Vesuvius in Italy and Tongariro in New Zealand, attract between one to four million tourists each year. In the last decade the designation of nearly 50 geoparks around the world has highlighted their potential for tourism development. This book provides the first global review and assessment of the sustainable use of active and dormant volcanic and geothermal environments for geotourism. The volcano-based tourism sector is further augmented through a closely linked range of geothermal resources and attractions, such as geysers and hot springs, which are discussed in detail throughout individual chapters covering all key volcanic and geothermal regions around the world. It is shown that volcano and geothermal tourism is a subsection of nature-based geotourism and incorporates a variety of other tourism categories such as adventure tourism, extreme tourism, ecotourism, green tourism, educational tourism, and hot spring tourism. This comprehensive book covers the most important issues of this growing tourism sector whilst incorporating relevant global research, making it an essential resource for all in the field. Includes colour plates.

**Aspects of Language Contact** Thomas Stolz,Dik Bakker,Rosa Salas Palomo,2008-08-27 This edited volume brings together fourteen original contributions to the on-going debate about what is possible in contact-induced language change. The authors present a number of new vistas on language contact which represent new developments in the field. In the first part of the volume, the focus is on methodology and theory. Thomas Stolz defines the study of Romancisation processes as a very promising laboratory for language-

contact oriented research and theoretical work based thereon. The reader is informed about the large scale projects on loanword typology in the contribution by Martin Haspelmath and on contact-induced grammatical change conducted by Jeanette Sakel and Yaron Matras. Christel Stolz reviews processes of gender-assignment to loan nouns in German and German-based varieties. The typology of loan verbs is the topic of the contribution by Søren Wichmann and Jan Wohlgemuth. In the articles by Wolfgang Wildgen and Klaus Zimmermann, two radically new approaches to the theory of language contact are put forward: a dynamic model and a constructivism-based theory, respectively. The second part of the volume is dedicated to more empirically oriented studies which look into language-contact constellations with a Romance donor language and a non-European recipient language. Spanish-Amerindian (Guaraní, Otomí, Quichua) contacts are investigated in the comparative study by Dik Bakker, Jorge Gómez-Rendón and Ewald Hekking. Peter Bakker and Robert A. Papen discuss the influence exerted by French on the indigenous languages of Canada. The extent of the Portuguese impact on the Amazonian language Kulina is studied by Stefan Dienst. John Holm looks at the validity of the hypothesis that bound morphology normally falls victim to Creolization processes and draws his evidence mainly from Portuguese-based Creoles. For Austronesia, borrowings and calques from French still are an understudied phenomenon. Claire Moyse-Faurie's contribution to this topic is thus a pioneer's work. Similarly, Françoise Rose and Odile Renault-Lescure provide us with fresh data on language contact in French Guiana. The final article of this collection by Mauro Tosco demonstrates that the Italianization of languages of the former Italian colonies in East Africa is only weak. This volume provides the reader with new insights on all levels of language-contact related studies. The volume addresses especially a readership that has a strong interest in language contact in general and its repercussions on the phonology, grammar and lexicon of the recipient languages. Experts of Romance language contact, and specialists of Amerindian languages, Afro-Asiatic languages, Austronesian languages and Pidgins and Creoles will find the volume highly valuable.

*Hot Springs of the Yellowstone National Park ; Microscopic Examinations by H. E. Merwin* Eugene Thomas Allen,Arthur Louis Day,1935

**Gold and Other Minor Elements Associated with the Hot Springs and Geysers of Yellowstone National Park, Wyoming, Supplemented with Data from Steamboat Springs, Nevada** Donald Edward White,Chris Heropoulos,Robert Orville Fournier,R. O. Fournier,1992 A commonly held theory of the origin of epithermal ore deposits relates Au, Ag, Hg, As, Sb, Tl, and other volatile elements to fossil hot-spring systems that transported and deposited these metallic elements close to the ground surface existing at the time. In the early 1970's, an emission-spectrographic method using short-wavelength radiation (SWR) was developed for use in the analysis of these volatile elements. This method was applied to 125 samples of rock and hot-spring chemical precipitates from Yellowstone National Park and 43 samples from Steamboat Springs, Nev. The results of those analyses are presented here. Recently, other, more sensitive methods for the analyses of gold and volatile elements have been developed and (or) become less expensive, but these methods generally have not yet been applied to Yellowstone samples. -- First paragraph.
