Braided Structures and Composites Sohel

Rana, Raul Fanguero, 2015-08-05 Braiding is a very old textile manufacturing technology that traditionally has been used to produce items like ropes, shoe laces, and cables. Recently, braiding has gained attention in the medical, aerospace, transportation, and civil engineering communities, among others, due to its ability to produce structures that can fulfill the explicit demands imposed by these technical sectors. **Braided Structures and Composites: Production, Properties, Mechanics, and Technical Applications** provides a single source of cutting-edge information on braiding and its applications. Featuring chapters authored by leading experts in their respective fields, this first-of-its-kind book: Explains the basic principles of braiding technology for industrial textiles, composites, and products Identifies the key parameters that influence the braiding process and its produced structures Shows how to control these parameters to achieve the desired material characteristics Discusses braided structure modeling and analysis techniques and software tools Describes various application requirements and their design solutions **Braided Structures and Composites: Production, Properties, Mechanics, and Technical Applications** supplies a critical understanding of braiding from concept to product design and application. This book is vital to the development of multifunctional products with highly specific features using braiding technology.

Identity, Security and Democracy Emilio

Mordini, Manfred Green, 2009 Many people think of personal identification as only part of the security/surveillance apparatus. This is likely to be an oversimplification, which largely misrepresents the reality.

'Personal identity' means two separate concepts, namely that an individual belongs to specific categories and also that this individual is distinguished by other persons and understood as one. In other words, there are two different aspects involved in personal recognition: distinguishing between individuals and distinguishing between sets of people. The latter is likely to be the real issue.

Dictatorships of any kind and totalitarian regimes have always ruled by categorizing people and by creating different classes of subjects. When rulers want their subjects to humiliate themselves or their fellows, they create categories of people or exploit existing categories. From social and political points of view this allows a process known as 'pseudospeciation' to be produced. Pseudospeciation is a process which turns social and cultural differences into biological diversities. It promotes cooperation within social groups, overpowering the selfish interests of individuals in favor of collective interests, yet it also inhibits cooperation between groups, and it fosters conflict and mistrust. This work is dedicated to the thorny and multifaceted relations between identity, security and democracy. Identity, Security and Democracy shows how full of nuances the process of human identification is. 10 PRINT CHR\$(205.5+RND(1)); : GOTO 10 Nick Montfort, Patsy Baudoin, John Bell, Ian Bogost, Jeremy Douglass, 2014-08-29 A single line of code offers a way to

understand the cultural context of computing. This book takes a single line of code—the extremely concise BASIC program for the Commodore 64 inscribed in the title—and uses it as a lens through which to consider the phenomenon of creative computing and the way computer programs exist in culture. The authors of this collaboratively written book treat code not as merely functional but as a text—in the case of 10 PRINT, a text that appeared in many different printed sources—that yields a story about its making, its purpose, its assumptions, and more. They consider randomness and regularity in computing and art, the maze in culture, the popular BASIC programming language, and the highly influential Commodore 64 computer.

Matthew's Bible John Rogers, 2009 The Matthew's Bible brings together the work of two giants of sixteenth century English Bible translation. William Tyndale and Myles Coverdale shared a vision of making the scriptures available to ordinary believers concerned that their authority might be undermined in a time when kings and clerics alike opposed translating them into English. William Tyndale's New Testament (1526) was the first English translation made from the original language, and it made the most of the emerging English tongue. Knowing neither Hebrew nor Greek, Myles Coverdale consulted Latin, English and German sources to guide his work. The vocabulary of Tyndale, John Wycliff, and other appears in the Coverdale Bible (1535), which was the first complete Bible in English. John Rogers combined Tyndale's and Coverdale's texts -- supplying some translation work of his own -- to create the Matthew's Bible. It was attributed to a fictitious Thomas Matthew, concealing the inclusion of Tyndale's text so King Henry VIII would license the volume's publication. So popular became the Matthew's Bible that bishops were encouraged to order copies for their parishes. This book is a facsimile of one of the finest existing copies of the Matthew's Bible. It features clear, legible type and faithfully reproduced, color pages with a new introduction by Dr. Joseph W. Johnson. -- Back cover

Millimeter-Wave Radio-over-Fiber Links based on Mode-Locked Laser Diodes Brendel,

Friederike, 2014-05-14 Radio communications in the range of 60 GHz enable multi-Gigabit/s network access in indoor environments. Due to the propagation characteristics of such signals only very short range radio transmission is feasible. In order to distribute these signals across large distances, analog transmission over optical fiber is considered. In this work, mode-locked laser diodes serve as optoelectronic oscillators for the generation of such signals. Their system-relevant properties are studied in detail.
