On Their Own Terms Benjamin A. ELMAN,2009-06-30 Since the middle of the nineteenth century, imperial reformers, early Republicans, Guomindang party cadres, and Chinese Communists have all prioritized science and technology. In this book, Elman gives a nuanced account of the ways in which native Chinese science evolved over four centuries, under the influence of both Jesuit and Protestant missionaries. In the end, he argues, the Chinese produced modern science on their own terms.

Chasing the Chinese Dream William N. Brown,2021-06-01 This open access book explores the historical, cultural and philosophical contexts that have made anti-poverty the core of Chinese society since Liberation in 1949, and why poverty alleviation measures evolved from the simplistic aid of the 1950s to Xi Jinping's precision poverty alleviation and its goal of eliminating absolute poverty by 2020. The book also addresses the implications of China's experience for other developing nations tackling not only poverty but such issues as pandemics, rampant urbanization and desertification exacerbated by global warming. The first of three parts draws upon interviews of rural and urban Chinese from diverse backgrounds and local and national leaders. These interviews, conducted in even the remotest areas of the country, offer candid insights into the challenges that have forced China to continually evolve its programs to resolve even the most intractable cases of poverty. The second part explores the historic, cultural and philosophical roots of old China's meritocratic government and how its ancient Chinese ethics have led to modern Chinese socialism's stance that "poverty amidst plenty is immoral". Dr. Huang Chengwei, one of China's foremost anti-poverty experts, explains the challenges faced at each stage as China's anti-poverty measures evolved over 70 years to emphasize "enablement" over "aid" and to foster bottom-up initiative and entrepreneurialism, culminating in Xi Jinping's precision poverty alleviation. The book also addresses why national economic development alone cannot reduce poverty; poverty alleviation programs must be people-centered, with measurable and accountable practices that reach even to household level, which China has done with its "First Secretary" program. The third part explores the potential for adopting China's practices in other nations, including the potential for replicating China's successes in developing countries through such measures as the

Belt and Road Initiative. This book also addresses prevalent misperceptions about China's growing global presence and why other developing nations must address historic, systemic causes of poverty and inequity before they can undertake sustainable poverty alleviation measures of their own.

Oceans Guy Jacques, Paul Tréguer, Herlé Mercier, 2021-03-05 Since the HMS Challenger expedition of 1872–1876, our vision of the ocean has changed completely. We now understand that it plays a key role in biodiversity, climate regulation, and mineral and biological resources, and as such, the ocean is a major service provider for humanity. *Oceans* draws on data from new oceanographic and satellite tools, acquired through international interdisciplinary programs. It describes the processes that control how the ocean functions, on different spatial and temporal scales. After considering the evolution of concepts in physical, chemical and biological oceanography, the book outlines the future of a warmer, acidified, less oxygenated ocean. It shows how a view of the ocean at different scales changes how we understand it. Finally, the book presents the challenges facing the ocean in terms of the exploitation of biological and mineral resources, in the context of sustainable development and the regulation of climate change.

The Mushroom at the End of the World Anna Lowenhaupt Tsing, 2017-09-19 What a rare mushroom can teach us about sustaining life on a fragile planet Matsutake is the most valuable mushroom in the world—and a weed that grows in human-disturbed forests across the northern hemisphere. Through its ability to nurture trees, matsutake helps forests to grow in daunting places. It is also an edible delicacy in Japan, where it sometimes commands astronomical prices. In all its contradictions, matsutake offers insights into areas far beyond just mushrooms and addresses a crucial question: what manages to live in the ruins we have made? A tale of diversity within our damaged landscapes, *The Mushroom at the End of the World* follows one of the strangest commodity chains of our times to explore the unexpected corners of capitalism. Here, we witness the varied and peculiar worlds of matsutake commerce: the worlds of Japanese gourmets, capitalist traders, Hmong jungle fighters, industrial forests, Yi Chinese goat herders, Finnish nature guides, and more. These companions also lead us into fungal ecologies and forest histories to better understand the promise of cohabitation in a time of massive human destruction. By investigating one of the world's most sought-after fungi, *The Mushroom at the End of the World* presents an original examination into the relation between capitalist destruction and collaborative survival within multispecies landscapes, the prerequisite for continuing life on earth.

Distributed Energy Resources in Local Integrated Energy Systems Giorgio Graditi, Marialaura Di Somma, 2021-02-27 Distributed Energy Resources in Local Integrated Energy Systems: Optimal Operation and Planning reviews research and policy developments surrounding the optimal operation and planning of DER in the context of local integrated energy systems in the presence of multiple energy carriers, vectors and multi-objective requirements. This assessment is carried out by analyzing impacts and benefits at local levels, and in distribution networks and larger systems. These frameworks represent valid tools to provide support in the decision-making process for DER operation and planning. Uncertainties of RES generation and loads in optimal DER scheduling are addressed, along with energy trading and blockchain technologies. Interactions among various energy carriers in local energy systems are investigated in scalable and flexible optimization models for adaptation to a number of real contexts thanks to the wide variety of generation, conversion and storage technologies considered, the exploitation of demand side flexibility, emerging technologies, and through the general mathematical formulations established. Integrates multi-energy DER, including electrical and thermal distributed generation, demand response, electric vehicles, storage and RES in the context of local integrated energy systems Fosters the integration of DER in the electricity markets through the concepts of DER aggregation Addresses the challenges of emerging paradigms as energy communities and energy blockchain applications in the current and future energy landscape Proposes operation optimization models and methods through multi-objective approaches for fostering short- and long-run sustainability of local energy systems Assesses and models the uncertainties of renewable resources and intermittent loads in the short-term decision-making process for smart decentralized energy systems

Envisioning Eternal Empire Yuri Pines, 2009-01-01 This ambitious book looks into the reasons for the exceptional durability of the Chinese empire, which lasted for more than two millennia (221 B.C.E.-1911 C.E.). Yuri Pines identifies the roots of the empire's longevity in the activities of thinkers of the Warring States period (453-221 B.C.E.), who, in their search for solutions to an ongoing political crisis, developed ideals, values, and perceptions that would become essential for the future imperial polity. In marked distinction to similar empires

worldwide, the Chinese empire was envisioned and to a certain extent preplanned long before it came into being. As a result, it was not only a military and administrative construct, but also an intellectual one. Pines makes the argument that it was precisely its ideological appeal that allowed the survival and regeneration of the empire after repeated periods of turmoil. Envisioning Eternal Empire presents a panoptic survey of philosophical and social conflicts in Warring States political culture. By examining the extant corpus of preimperial literature, including transmitted texts and manuscripts uncovered at archaeological sites, Pines locates the common ideas of competing thinkers that underlie their ideological controversies. This bold approach allows him to transcend the once fashionable perspective of competing schools of thought and show that beneath the immense pluralism of Warring States thought one may identify common ideological choices that eventually shaped traditional Chinese political culture

Mainstream Culture Refocused Xueping Zhong, 2019-01-31 Serialized television drama (dianshiju), perhaps the most popular and influential cultural form in China over the past three decades, offers a wide and penetrating look at the tensions and contradictions of the post-revolutionary and pro-market period. Zhong Xueping's timely new work draws attention to the multiple cultural and historical legacies that coexist and challenge each other within this dominant form of story telling. Although scholars tend to focus their attention on elite cultural trends and avant garde movements in literature and film, Zhong argues for recognizing the complexity of dianshiju's melodramatic mode and its various subgenres, in effect refocusing mainstream Chinese culture. *Mainstream Culture Refocused* opens with an examination of television as a narrative motif in three contemporary Chinese art-house films. Zhong then turns her attention to dianshiju's most important subgenres. Emperor dramas highlight the link between popular culture's obsession with emperors and modern Chinese intellectuals' preoccupation with issues of history and tradition and how they relate to modernity. In her exploration of the anti-corruption subgenre, Zhong considers three representative dramas, exploring their diverse plots and emphases. Youth dramas' rich array of representations reveal the numerous social, economic, cultural, and ideological issues surrounding the notion of youth and its changing meanings. The chapter on the family-marriage subgenre analyzes the ways in which women's emotions are represented in relation to their desire for happiness. Song lyrics from music composed for television dramas are considered as popular poetics. Their sentiments range between nostalgia and uncertainty, mirroring the social contradictions of the reform era. The Epilogue returns to the relationship between intellectuals and the production of mainstream cultural meaning in the context of China's post-revolutionary social, economic, and cultural transformation. Provocative and insightful, *Mainstream Culture Refocused* will appeal to scholars and students in studies of modern China generally and of contemporary Chinese media and popular culture specifically.

The Battle for China's Past Mobo Gao, 2008-02-20 Mao and his policies have long been demonized in the West, with the Cultural Revolution considered a fundamental violation of human rights. As China embraces capitalism, the Mao era is being denigrated by the Chinese political and intellectual elite. This book tackles the extremely negative depiction of China under Mao in recent publications and argues that most people in China, including the rural poor and the urban working class, actually benefited from Mao's policies. Under Mao there was a comprehensive welfare system for the urban poor and basic health and education provision in rural areas. These policies are being reversed in the current rush towards capitalism. Offering a critical analysis of mainstream accounts of the Mao era and the Cultural Revolution, this book sets the record straight, making a convincing argument for the positive effects of Mao's policies on the well-being of the Chinese people.

Innovative China World Bank Group, Development Research Center of the State Council, 2019 After more than three decades of average annual growth close to 10 percent, China's economy is transitioning to a 'new normal' of slower but more balanced and sustainable growth. Its old drivers of growth -- a growing labor force, the migration from rural areas to cities, high levels of investments, and expanding exports -- are waning or having less impact. China's policymakers are well aware that the country needs new drivers of growth. This report proposes a reform agenda that emphasizes productivity and innovation to help policymakers promote China's future growth and achieve their vision of a modern and innovative China. The reform agenda is based on the three D's: removing Distortions to strengthen market competition and enhance the efficient allocation of resources in the economy; accelerating Diffusion of advanced technologies and management practices in China's economy, taking advantage of the large remaining potential for catch-up growth; and fostering Discovery and nurturing China's competitive and innovative capacity as China approaches OECD incomes in the decades ahead and extends the global innovation and technology frontier.
