Soft Computing in Interdisciplinary Sciences S. Chakraverty, 2021-11-01 This book meets the present and future needs for the interaction between various science and technology/engineering areas on the one hand and different branches of soft computing on the other. Soft computing is the recent development about the computing methods which include fuzzy set theory/logic, evolutionary computation (EC), probabilistic reasoning, artificial neural networks, machine learning, expert systems, etc. Soft computing refers to a partnership of computational techniques in computer science, artificial intelligence, machine learning, and some other engineering disciplines, which attempt to study, model, and analyze complex problems from different interdisciplinary problems. This, as opposed to traditional computing, deals with approximate models and gives solutions to complex real-life problems. Unlike hard computing, soft computing is tolerant of imprecision, uncertainty, partial truth, and approximations. Interdisciplinary sciences include various challenging problems of science and engineering. Recent developments in soft computing are the bridge to handle different interdisciplinary science and engineering problems. In recent years, the correspondingly increased dialog between these disciplines has led to this new book. This is done, firstly, by encouraging the ways that soft computing may be applied in traditional areas, as well as point towards new and innovative areas of applications and secondly, by encouraging other scientific disciplines to engage in a dialog with the above computation algorithms outlining their problems to both access new methods as well as to suggest innovative developments within itself.

*Delay- and Disruption-tolerant Networking* Stephen Farrell, Vinny Cahill, 2006 Delay and disruption networking (DTN) is an up-and-coming technology that enables networking in extreme environments. This complete reference on DTN covers applications requirements, DTN protocols, and network implementation. Thoroughly examining the causes of delay and disruption, the book shows how to engineer a robust network that can survive the harshest conditions.

**Mobile and Wireless Communication Networks** Guy Pujolle, 2006-07-31 This volume presents proceedings from the 19th IFIP World Computer Congress in Santiago, Chile. The proceedings of the World Computer Congress are a product of the gathering of 2,000 delegates from more than 70 countries to discuss a myriad of topics in the ICT domain. Of particular note, this marks the first time that a World Computer Congress has been held in a Latin American country. Topics in this series include: The 4th International Conference on Theoretical Computer Science Education for the 21st Century- Impact of ICT and Digital Resources Mobile and Wireless Communication Networks Ad-Hoc Networking Network Control and Engineering for QoS, Security, and Mobility The Past and Future of Information Systems: 1976-2006 and Beyond History of Computing and Education Biologically Inspired Cooperative Computing Artificial Intelligence in Theory and Practice Applications in Artificial Intelligence Advanced Software Engineering: Expanding the Frontiers of Software For a complete list of the more than 300 titles in the IFIP Series, visit [springer.com](http://springer.com). **Host Identity Protocol (HIP)** Andrei Gurtov, 2008-09-15 "Within the set of many identifier-locator separation designs for the Internet, HIP has progressed further than anything else we have so far. It is time to see what HIP can do in larger scale in the real world. In order to make that happen,

the world needs a HIP book, and now we have it.” - Jari Arkko, Internet Area Director, IETF One of the challenges facing the current Internet architecture is the incorporation of mobile and multi-homed terminals (hosts), and an overall lack of protection against Denial-of-Service attacks and identity spoofing. The Host Identity Protocol (HIP) is being developed by the Internet Engineering Task Force (IETF) as an integrated solution to these problems. The book presents a well-structured, readable and compact overview of the core protocol with relevant extensions to the Internet architecture and infrastructure. The covered topics include the Bound End-to-End Tunnel Mode for IPsec, Overlay Routable Cryptographic Hash Identifiers, extensions to the Domain Name System, IPv4 and IPv6 interoperability, integration with SIP, and support for legacy applications. Unique features of the book: All-in-one source for HIP specifications Complete coverage of HIP architecture and protocols Base exchange, mobility and multihoming extensions Practical snapshots of protocol operation IP security on lightweight devices Traversal of middleboxes, such as NATs and firewalls Name resolution infrastructure Micromobility, multicast, privacy extensions Chapter on applications, including HIP pilot deployment in a Boeing factory HOWTO for HIP on Linux (HIPL) implementation An important compliment to the official IETF specifications, this book will be a valuable reference for practicing engineers in equipment manufacturing companies and telecom operators, as well as network managers, network engineers, network operators and telecom engineers. Advanced students and academics, IT managers, professionals and operating system specialists will also find this book of interest.

*Next-Generation Internet* Byrav Ramamurthy, George N. Rouskas, Krishna Moorthy Sivalingam, 2011-02-03 With ever-increasing demands on capacity, quality of service, speed, and reliability, current Internet systems are under strain and under review. Combining contributions from experts in the field, this book captures the most recent and innovative designs, architectures, protocols, and mechanisms that will enable researchers to successfully build the next-generation Internet. A broad perspective is provided, with topics including innovations at the physical/transmission layer in wired and wireless media, as well as the support for new switching and routing paradigms at the device and sub-system layer. The proposed alternatives to TCP and UDP at the data transport layer for emerging environments are also covered, as are the novel models and theoretical foundations proposed for understanding network complexity. Finally, new approaches for pricing and network economics are discussed, making this ideal for students, researchers, and practitioners who need to know about designing, constructing, and operating the next-generation Internet.

*Advances in Computing and Communications, Part IV* Ajith Abraham, Jaime Lloret Mauri, John Buford, Junichi Suzuki, Sabu M. Thampi, 2011-07-06 This volume is the fourth part of a four-volume set (CCIS 190, CCIS 191, CCIS 192, CCIS 193), which constitutes the refereed proceedings of the First International Conference on Computing and Communications, ACC 2011, held in Kochi, India, in July 2011. The 62 revised full papers presented in this volume were carefully reviewed and selected from a large number of submissions. The papers are the papers of the Workshop on Cloud Computing: Architecture, Algorithms and Applications (CloudComp2011), of the Workshop on Multimedia Streaming (MultiStreams2011), and of the Workshop on Trust Management in P2P Systems (IWTMP2PS2011).

**Responsabilidad de los proveedores del servicio de internet en relación con la propiedad intelectual** Ernesto Rengifo García, 2015-01-01 el correcto funcionamiento y desarrollo de los mercados. El mercado de las telecomunicaciones experimenta una modificación estructural como consecuencia de la convergencia entre servicios, redes y productos y, en general, por la existencia de plataformas para múltiples servicios. El proceso de convergencia muestra además una intersección cada vez más creciente entre las tecnologías de la información y las telecomunicaciones. Los llamados contenidos son fuente fundamental y base de la revolución de la internet. La red global no es un conjunto inerte de aparatos o servidores: es más bien un medio de comunicación, una red de información y, por ende, los contenidos la explican y la configuran.

**Guidelines on Firewalls and Firewall Policy** Karen Scarfone, 2010-03 This updated report provides an overview of firewall technology, and helps organizations plan for and implement effective firewalls. It explains the technical features of firewalls, the types of firewalls that are available for implementation by organizations, and their security capabilities. Organizations are advised on the placement of firewalls within the network architecture, and on the selection, implementation, testing, and management of firewalls. Other issues covered in detail are the development of firewall policies, and recommendations on the types of network traffic that should be prohibited. The appendices contain helpful supporting material, including a glossary and lists of acronyms and abbreviations; and listings of in-print and online resources. Illus.

**Time, Death, and the Feminine** Tina Chanter, 2001 Examining Levinas's critique of the Heideggerian conception of temporality, this book shows how the notion of the feminine both enables and prohibits the most fertile territory of Levinas's thought. According to Heidegger, the traditional notion of time, which stretches from Aristotle to Bergson, is incoherent because it rests on an inability to think together two assumptions: that the present is the most real aspect of time, and that the scientific model of time is infinite, continuous, and constituted by a series of more or less identical now-points. For Heidegger, this contradiction, which privileges the present and thinks of time as ongoing, derives from a confusion about Being. He suggests that it is not the present but the future that is the primordial

ecstasis of temporality. For Heidegger, death provides an orientation for our authentic temporal understanding. Levinas agrees with Heidegger that mortality is much more significant than previous philosophers of time have acknowledged, but for Levinas, it is not my death, but the death of the other that determines our understanding of time. He is critical of Heidegger's tendency to collapse the ecstases (past, present, and future) of temporality into one another, and seeks to move away from what he sees as a totalizing view of time. Levinas wants to rehabilitate the unique character of the instant, or present, without sacrificing its internal dynamic to the onward progression of the future, and without neglecting the burdens of the past that history visits upon us. The author suggests that though Levinas's conception of subjectivity corrects some of the problems Heidegger's philosophy introduces, such as his failure to deal adequately with ethics, Levinas creates new stumbling blocks, notably the confining role he accords to the feminine. For Levinas, the feminine functions as that which facilitates but is excluded from the ethical relation that he sees as the pinnacle of philosophy. Showing that the feminine is a strategic part of Levinas's philosophy, but one that was not thought through by him, the author suggests that his failure to solidly place the feminine in his thinking is structurally consonant with his conceptual separation of politics from ethics.

**Ethics-Politics-Subjectivity** Simon Critchley, 2020-05-05 In *Ethics-Politics-Subjectivity*, Simon Critchley takes up three questions at the centre of contemporary theoretical debate: What is ethical experience? What can be said of the subject who has this experience? What, if any, is the relation of ethical experience to politics? Through spirited confrontations with major thinkers, such as Lacan, Nancy, Rorty, and, in particular, Levinas and Derrida, Critchley finds answers in a nuanced ethics of finitude and defends the political possibilities of deconstruction. Democracy, economics, friendship, and technology are all considered anew in Critchley's bold excursions on the meaning and value of recent French philosophy.

**Proximity Levinas, Blanchot, Bataille and Communication** Joseph Libertson, 2012-12-06 The problematic reality of an alterity implicit in the concept of communication has been a consistent attestation in formal discourse. The rapport of thought to this alterity has been consistently described as a radical inadequation. By virtue of the communicational economy which produces discontinuity and relation, illumination and the possibility of consciousness, an opacity haunts the familiarity of comprehension. Consciousness' spontaneity is limited by the difference or discontinuity of the exterior thing, of the exterior subject or intersubjective other, and of

the generality of existence in its excess over comprehension's closure. An element implicit in difference or discontinuity escapes the power of comprehension, and even the possibility of manifestation. Within the system of tendencies and predications which characterizes formal discourse, however, this escape of alterity is most often understood as an escape which proceeds from its own substantiality: the unknowable in-itself of things, of subjects, and of generality. Alterity escapes the power of comprehension, on the basis of its power to escape this power. That which escapes the effectivity of consciousness, escapes on the basis of its own effectivity. For this reason, the rapport of inadequation described by the escape may function in formal discourse as a correlation. The inadequation of comprehension and exteriority may function as the vicissitude of a larger adequation. The latent principles of this adequation are power and totalization.

*Heritage, Labour, and the Working Classes* Laurajane Smith, Paul A. Shackel, Gary Campbell, 2011 *Heritage, Labour and the Working Classes* is both a celebration and commemoration of working class culture. It contains sometimes inspiring accounts of working class communities and people telling their own stories, and weaves together examples of tangible and intangible heritage, place, history, memory, music and literature. It represents an innovative and useful resource for heritage and museum practitioners, students and academics concerned with understanding community heritage and the debate on social inclusion/exclusion. It offers new ways of understanding heritage, its values and consequences, and presents a challenge to dominant and traditional frameworks for understanding and identifying heritage and heritage making.

***Discrete-Time Speech Signal Processing*** Thomas F. Quatieri, 2008-11-10

Essential principles, practical examples, current applications, and leading-edge research. In this book, Thomas F. Quatieri presents the field's most intensive, up-to-date tutorial and reference on discrete-time speech signal processing. Building on his MIT graduate course, he introduces key principles, essential applications, and state-of-the-art research, and he identifies limitations that point the way to new research opportunities. Quatieri provides an excellent balance of theory and application, beginning with a complete framework for understanding discrete-time speech signal processing. Along the way, he presents important advances never before covered in a speech signal processing text book, including sinusoidal speech processing, advanced time-frequency analysis, and nonlinear aeroacoustic speech production modeling. Coverage includes: Speech production and speech perception: a dual view Crucial distinctions between stochastic and deterministic problems Pole-zero speech models Homomorphic signal processing Short-time Fourier transform analysis/synthesis Filter-bank and wavelet analysis/synthesis Nonlinear measurement and modeling techniques The book's in-depth applications coverage includes speech coding, enhancement, and modification; speaker recognition; noise reduction; signal restoration; dynamic range compression, and more. *Principles of Discrete-Time Speech Processing* also contains an exceptionally complete series of examples and Matlab exercises, all carefully integrated into the book's coverage of theory and applications.

*The Creative Mind* Henri Bergson, 2012-04-12 The Nobel Laureate discusses not only how and why he became a philosopher but also his conception of

philosophy as a field distinct from science and literature.

**Class and Other Identities** Lex Heerma van Voss, Marcel van der Linden, 2002-06-30 With the onset of a more conservative political climate in the 1980s, social and especially labour history saw a decline in the popularity that they had enjoyed throughout the 1960s and 1970s. This led to much debate on its future and function within the historical discipline as a whole. Some critics declared it dead altogether. Others have proposed a change of direction and a more or less exclusive focus on images and texts. The most constructive proposals have suggested that labour history in the past concentrated too much on class and that other identities of working people should be taken into account to a larger extent than they had been previously, such as gender, religion, and ethnicity. Although class as a social category is still as valid as it has been before, the questions now to be asked are to what extent non-class identities shape working people's lives and mentalities and how these are linked with the class system. In this volume some of the leading European historians of labour and the working classes address these questions. Two non-European scholars comment on their findings from an Indian, resp. American, point of view. The volume is rounded off by a most useful bibliography of recent studies in European labour history, class, gender, religion, and ethnicity.
