Renzhi Li

Theory of Groups of Finite Order William Burnside, 1897

The Ethics of Information Technologies Keith W

Miller, Mariarosaria Taddeo, 2020-08-13 This volume collects key influential papers that have animated the debate about information computer ethics over the past three decades, covering issues such as privacy, online trust, anonymity, values sensitive design, machine ethics, professional conduct and moral responsibility of software developers. These previously published articles have set the tone of the discussion and bringing them together here in one volume provides lecturers and students with a one-stop resource with which to navigate the debate.

Modality in English and Chinese Renzhi Li, 2004 Modality is a grammatical, or semantic-grammatical, category. It is an important component of human languages. This is at least the case in most European languages. To what extent is it a near-universal? This thesis is to contribute to the question. It focuses on modal verbs in English and Chinese, two genetically and geographically unrelated languages, and analyzes what these two languages have in common and how they differ in their systems of modality. To achieve the aim, the thesis adopts the theoretical framework proposed by van der Auwera (1996, 1998 with Plungian, 2001) for the typological study of modality. Its language-specific descriptions involve the morphosyntactic features, notional functions, modal logic, and diachronic development. With these descriptions, it constructs a cross-linguistic database in a uniform, parallel structure. Then on the basis of this database, it deals with the cross-linguistic issues about modality in English and Chinese. Like many of the studies in this area, this research makes use of the well-sampled data in the relevant literature, thereby assuring the same degree of representativeness. When the data do not meet this need, it resorts to computer-based corpora. In the diachronic study of Chinese modality, quantitative analysis is adopted in proposing a

development path for the senses of a modal. English translation is given particular attention in the description of Chinese modality and cross-linguistic analyses. One can only know one's own language only if one compares it with other languages. The present study is conducive to a better understanding of English and Chinese. It contributes not only to the investigation of language universals, but also to the study of human cognition and other linguistic or applied linguistic issues.

Conflict and Compliance Sonia Cardenas,2011-03-18

International human rights pressure has been applied to numerous states with varying results. In *Conflict and Compliance*, Sonia Cardenas examines responses to such pressure and challenges conventional views of the reasons states do—or do not—comply with international law. Data from disparate bodies of research suggest that more pressure to comply with human rights standards is not necessarily more effective and that international policies are more efficient when they target the root causes of state oppression. Cardenas surveys a broad array of evidence to support these conclusions, including Latin American cases that incorporate recent important declassified materials, a statistical analysis of all the countries in the world, and a set of secondary cases from Eastern Europe, South Africa, China, and Cuba. The views of human rights skeptics and optimists are surveyed to illustrate how state rhetoric and behavior can be interpreted differently depending on one's perspective. Theoretically and methodologically sophisticated, *Conflict and Compliance* paints a new picture of the complex dynamics at work when states face competing pressures to comply with and violate international human rights norms.
