Proceedings, Second Expert Meeting on Harmonizing Forest-Related Definitions for Use by Various Stakeholders ,2002 The objectives of the meeting were to (i) recommend options for harmonizing forest-related definitions, (ii) make proposals for the implementation of these options, and (iii) establish a commonly agreed upon future agenda. It was expected to thus contribute towards improving efficiency of processes in different international policies related to forests. It was clearly stated that harmonization does not mean standardization. Harmonization can include adjustments for improved compatibility and consistency, establishing comparability, linkages and hierarchies between terms, but also documenting differences.

Wars From Within Albrecht Schnabel,Rohan Gunaratna,2014-10-30 Wars from Within brings together an international and multidisciplinary group of academics and practitioner-researchers specializing in the study of insurgent movements in order to provide a deeper understanding of the violent manifestations of insurgencies in different parts of the world. In doing so, the book adopts both a functional and regional approach. Firstly, thematic chapters discuss the typology of insurgencies (ethnopolitical, religious and ideological), past and potential responses to them, as well as the impact of advance communication technology on insurgent activity. The book then presents a series of case studies assessing the successes and failures of managing contemporary insurgencies. These are drawn from European, Asian and Middle Eastern insurgencies, as well as the global al-Qaeda network that typifies the post-9/11 challenge posed by internationally operating terrorist organizations. The case studies highlight factors and conditions that trigger, escalate, de-escalate and ultimately end insurgent campaigns. The book concludes with an assessment of how the international community at large has responded and should respond to insurgencies in the future. Progress in Biomass and Bioenergy Production Shahid Shaukat,2011-07-27 Alternative energy sources have become a hot topic in recent years. The supply of fossil fuel, which provides about 95 percent of total energy demand today, will eventually run out in a few decades. By contrast, biomass and biofuel have the potential to become one of the major global primary energy source along with other alternate energy sources in the years to come. A wide variety of biomass conversion options with different performance characteristics exists. The goal of this book is to provide the readers with current state of art about biomass and bioenergy production and some other environmental technologies such as Wastewater treatment, Biosorption and Bio-economics. Organized around providing recent methodology, current state of modelling and techniques of parameter estimation in gasification process are presented at length. As such, this volume can be used by undergraduate and graduate students as a reference book and by the researchers and environmental engineers for reviewing the current state of knowledge on biomass and bioenergy production, biosorption and wastewater treatment.

Essentials of Medical Geology Olle Selinus,2013-03-30 Essentials of Medical Geology reviews the essential concepts and practical tools required to tackle environmental and public health problems. It is organized into four main sections. The first section deals with the fundamentals of environmental biology, the natural and anthropogenic sources of health elements that impact health and illustrate key biogeochemical transformations. The second section looks at the geological processes influencing human exposure to specific elements, such as radon, arsenic, fluorine, selenium and iodine. The third section presents the concepts and techniques of pathology, toxicology and epidemiology that underpin investigations into the human health effects of exposure to naturally occurring elements. The last section provides a toolbox of analytical approaches to environmental research and medical geology investigations. Essentials of Medical Geology was first published in 2005 and has since won three prestigious rewards. The book has been recognized as a key book in both medical and geology fields and is widely used as textbook and reference book in these fields. For this revised edition, editors and authors have updated the content that evolved a lot during 2005 and added two new chapters, on public health, and agriculture and health. This updated volume can now continue to be used as a textbook and reference book for all who are interested in this important topic and its impacts the health and wellbeing of many millions of people all over the world. · Addresses key topics at the intersection of environmental science and human health · Developed by 60 international experts from 20 countries and edited by professionals from the International Medical Geology Association (IMGA) · Written in non-technical language for a broad spectrum of readers, ranging from students and professional researchers to policymakers and the general public · Includes color illustrations throughout, references for further investigation and other aids to the reader

Focus on Hazardous Materials Research Leonora G. Mason,2007 Hazardous waste is a waste with properties that make it dangerous or potentially harmful to human health or the environment. Hazardous waste generally exhibits one or more of these characteristics: ignitability, corrosivity, reactivity or toxicity. The universe of hazardous wastes is large and diverse. Hazardous wastes can be liquids, solids, contained gases, or sludges. They can be the by-products of manufacturing processes or simply discarded commercial products, like cleaning fluids or pesticides. One of its type is radioactive waste. This book brings together the latest

research in this diverse field.

Transportation Research Tom V. Mathew,Gaurang J. Joshi,Nagendra R. Velaga,Shriniwas Arkatkar,2019-10-24 This book presents selected papers from the 4th Conference of the Transportation Research Group of India. It provides a comprehensive analysis of themes spanning the field of transportation encompassing economics, financial management, social equity, green technologies, operations research, big data analysis, econometrics and structural mechanics. Aquatic Contamination Rouf Ahmad Bhat,Gowhar H. Dar,Fernanda M. Tonelli,Saima Hamid,2024-01-25 More than two-thirds of the earth is covered with aquatic habitats that play a key role in stabilizing the global environment and providing a wide variety of services to increasing human needs. Nevertheless, anthropogenic activities are rapidly destroying the quality of both fresh and marine waters over the globe due to excessive use of chemicals and fertilizers, and pollution from suburban and industrial areas eventually make their way into the aquatic world. To preserve the integrity of aquatic environs is the greatest challenge in the current era because more than 80 per cent of urban wastewater, millions of tons of heavy metals chemical, toxic sludge and other waste are being directly discharged into inland waters. There are many reports that bacteria and plant species are using biodegradation and bioremediation strategies. The potential drivers of the commercial use of biological resources are yet to be explored as there are issues involved with technological facilitation and it's need for large investment funds, so there is a need to explore better training and development of more eco-friendly biological resources. After global investigation, the use of biological remediation technologies to deal with environmental problems should become standard practice, even though respondents are striving to apply bioremediation techniques. As microorganisms have evolved different survival strategies in heavier metal-polluted conditions such as biosorption, bioaccumulation or biomineralisation, which are either ex situ or in situ exploitation, these organisms are known to evolve and introduce specific detoxification mechanisms. The use of microbes as a time-saver for bioremediation was a result of the complexities involved in conventional soil regeneration methods. There are so many fungal species (like genera Penicillium, Aspergillus and Rhizopus) which has been identified as potential microbial agents for the removal of heavy metals from aqueous solutions but due to toxicity of chemical or heavy metals, it is difficult to maintain a healthy population of microorganisms hence high throughput genetic engineering tools and techniques need to be employed to attain resistant strains to degrade xenobiotic compounds. A novel technology for obtaining highly efficient biosorbents from endophytes, a hyperaccumulator, which is more convenient than the traditional method of obtaining biosorbents. Genomics, for instance in GMO plants, have been studied and used primarily in microbial genetics, but it is now a new instrument for bioremediation. Knowledge of genomics in the sense of understanding microbiological remediation provides a view of genes linked to microbial exposure to soil toxic metals. The use of genomics in bioremediation enables microorganisms to be analyzed on the basis both of biochemical and mechanism-related molecular levels.--

Environmentalism Elias Kahraman,Ahmed Baig,2010 Environmentalism is a broad philosophy and social movement centered on a concern for the conservation and improvement of the environment. This book puts forward some key strategies for promoting Cleaner Production in China, for instance, integrating CP into sustainability strategies, technology innovations and industrial ecology. Furthermore, the authors examine the Energy Masting Planning, a comprehensive plan that addresses energy supply and consumption through 2020. The plan includes energy efficiency, renewable energy and infrastructure and land use policies and emphasises both the benefits and the limits of the approach. Furthermore, removal of toxic and heavy metal contaminants from aqueous environments is one of the most important environmental issues to face the world. In this book, aerobic degradation through bioaccumulation by bacteria and microalgae and enzyme-catalysed reduction-based remediation of toxicants from waste waters are discussed. Other chapters in this book examine the attitudes of university students towards the environment and environmental problems, the influence on the causes of forest decline and an analysis of specific factors that influence the nominal median price of single-family homes across states, with a particular emphasis placed on the capitalisation of environmental factors such as environmental pollution in the form of toxic chemical releases.
