Waste Management and the Environment V Viktor Popov,H. Itoh,U. Mander,C. A. Brebbia,2010

The International Conference on Waste Management and the Environment is organised every two years by the Wessex Institute of Technology in collaboration with other institutions. This fifth conference follows the success of previous meetings held in C diz (2002), Rhodes (2004), Malta (2006) and Granada (2008). Waste Management is becoming one of the key problems of the modern world, an international issue that is intensified by the volume and complexity of domestic and industrial waste discarded by society. Unfortunately, many of the practices adopted in the past were aimed at short-term solutions without sufficient regard or knowledge for long-term implications on health, the environment or sustainability and this, in many cases, is leading to the need to take difficult and expensive remedial action. With our growing awareness of the detrimental environmental effects of current waste disposal, there is a significant onus of accountability for effective waste management. Better practice and safer solutions are required. Not only is there a need for more research on current disposal methods such as landfill, incineration, chemical and effluent treatment, but also on recycling, waste minimisation, clean technologies, waste monitoring, public and corporate awareness, and general education.

Software Engineering for Robotics Ana Cavalcanti,Brijesh Dongol,Rob Hierons,Jon Timmis,Jim Woodcock,2021-07-05 The topics covered in this book range from modeling and programming languages and environments, via approaches for design and verification, to issues of ethics and regulation. In terms of techniques, there are results on model-based engineering, product lines, mission specification, component-based development, simulation, testing, and proof. Applications range from manufacturing to service robots, to autonomous vehicles, and even robots than evolve in the real world. A final chapter summarizes issues on ethics and regulation based on discussions from a panel of experts. The origin of this book is a two-day event, entitled RoboSoft, that took place in November 2019, in London. Organized with the generous support of the Royal Academy of Engineering and the University of York, UK, RoboSoft brought together more than 100 scientists, engineers and practitioners from all over the world, representing 70 international institutions. The intended readership includes researchers and practitioners with all levels of experience interested in working in the area of robotics, and software engineering more generally. The chapters are all self-contained, include explanations of the core concepts, and finish with a discussion of directions for further work. Chapters 'Towards Autonomous Robot Evolution', 'Composition, Separation of Roles and Model-Driven

Approaches as Enabler of a Robotics Software Ecosystem' and 'Verifiable Autonomy and Responsible Robotics' are available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.

The Housing Bias P. Boudreaux, 2011-08-01 Arguing that our laws are skewed to benefit entrenched homeowners, at the expense of newcomers and lower-income households, this book advocates both for libertarian ideals and for social justice - an unusual and revealing combination.

The Youth Guide to Forests Food and Agriculture Organization of the United Nations, 2018-06-06 This fact-filled guide explores forests from the equator to the frozen poles, the depths of the rainforest to the mountain forests at high altitudes. It also demonstrates the many benefits that forests provide us with, discusses the negative impacts that humans unfortunately have on forests and explains how good management can help protect and conserve forests and forest biodiversity. At the end of the guide, inspiring examples of youth-led initiatives and an easy-to-follow action plan will help young people develop their own forest conservation activities and projects.

Pocket Oncology Alexander Drilon, Michael Postow, Lee Krug, 2014-04-09 Pocket Oncology, developed and edited by oncologists at Memorial Sloan-Kettering Cancer Center, is a simple, yet comprehensive, review of basic principles of cancer management. Prepared in the style and format of books in the popular Pocket Notebook series, Pocket Oncology is intended as a quick reference presented in easy to read bulleted text, and using diagrams and charts where appropriate. Each oncologic disease is presented on two facing pages that review initial clinical presentation, pathophysiology, staging, current standard of care treatments, and active areas of current research. Edited by Alexander Drilon and Michael Postow, the content of the book has been written by medical oncology fellows and each disease entity has been authoritatively reviewed by an oncologist with specific expertise in each subspecialty of oncology. Features: • simple, comprehensive, review of basic principles of oncology in easy to read bulleted text, using diagrams and charts where appropriate. • its small size makes it easy to carry the pocket of a lab coat for quick reference to information while in the hospital or oncology clinic. • perfect for medical students, residents, fellows, physician assistants, and nurses who perform daily oncologic care.

The New Psychology of Health Catherine Haslam, Jolanda Jetten, Tegan Cruwys, Genevieve Dingle, S. Alexander Haslam, 2018-05-01 British Psychology Society Textbook of the Year 2020 Why do

people who are more socially connected live longer and have better health than those who are socially isolated? Why are social ties at least as good for your health as not smoking, having a good diet, and taking regular exercise? Why is treatment more effective when there is an alliance between therapist and client? Until now, researchers and practitioners have lacked a strong theoretical foundation for answering such questions. This ground-breaking book fills this gap by showing how social identity processes are key to understanding and effectively managing a broad range of health-related problems. Integrating a wealth of evidence that the authors and colleagues around the world have built up over the last decade, *The New Psychology of Health* provides a powerful framework for reconceptualising the psychological dimensions of a range of conditions – including stress, trauma, ageing, depression, addiction, eating behaviour, brain injury, and pain. Alongside reviews of current approaches to these various issues, each chapter provides an in-depth analysis of the ways in which theory and practice can be enriched by attention to social identity processes. Here the authors show not only how an array of social and structural factors shape health outcomes through their impact on group life, but also how this analysis can be harnessed to promote the delivery of ‘social cures’ in a range of fields. This is a must-have volume for service providers, practitioners, students, and researchers working in a wide range of disciplines and fields, and will also be essential reading for anyone whose goal it is to improve the health and well-being of people and communities in their care.

Fungal Diseases Institute of Medicine, Board on Global Health, Forum on Microbial Threats, 2011-10-08 Fungal diseases have contributed to death and disability in humans, triggered global wildlife extinctions and population declines, devastated agricultural crops, and altered forest ecosystem dynamics. Despite the extensive influence of fungi on health and economic well-being, the threats posed by emerging fungal pathogens to life on Earth are often underappreciated and poorly understood. On December 14 and 15, 2010, the IOM's Forum on Microbial Threats hosted a public workshop to explore the scientific and policy dimensions associated with the causes and consequences of emerging fungal diseases.

The 10 Stupidest Mistakes Men Make When Facing Divorce Joseph Cordell, 2010-12-07 The Knowledge Every Man Needs for a Successful Divorce Each year 500,000 men will face divorce, and most of them make at least one crucial—and often irreversible—mistake. These errors might seem minor, such as moving out while things get sorted out, or thinking of “temporary” orders as being truly temporary. But when they get to court, these men discover they have put themselves in a terrible position. They may have to give up their house, pay impossibly high alimony, or even lose custody.

You could be one of these men. But you don't have to be. Joseph Cordell, the founder of the nation's largest law firm focusing on men's divorce and the creator of the Dads Divorce website, has seen the consequences of the mistakes men make. Drawing upon the huge number of cases that Cordell & Cordell has handled, this book identifies the 10 most common mistakes that end up hurting men in divorce. Cordell demystifies the divorce process, explains what judges consider in making their final decisions, and lays out a road map for positive actions men can take to achieve the best possible outcome. No man should face divorce without this book.

First Across! Richard K. Smith,2012 First Across is the exciting story of the first transatlantic flight. The flight, made in 1919, took a six-man crew nearly three weeks to complete. This book describes in detail the entire operation: the planning, the men and their aircraft, the primitive radio communication, and method of air navigation. In First Across Richard K. Smith has used photographs, cartoons, and even advertisements of the era to help evoke that spring of 1919, an important moment in the history of transportation.

The Scrum Field Guide Mitch Lacey,2015-12-22 Thousands of organizations are adopting Scrum to transform the way they execute complex projects, in software and beyond. This guide will give you the skills and confidence needed to deploy Scrum, resulting in high-performing teams and satisfied customers. Drawing on years of hands-on experience helping companies succeed, Certified Scrum Trainer (CST) Mitch Lacey helps you overcome the major challenges of Scrum adoption and the deeper issues that emerge later. Extensively revised to reflect improved Scrum practices and tools, this edition adds an all-new section of tips from the field. Lacey covers many new topics, including immersive interviewing, collaborative estimation, and deepening business alignment. In 35 engaging chapters, you'll learn how to build support and maximize value across your company. Now part of the renowned Mike Cohn Signature Series on agile development, this pragmatic guide addresses everything from establishing roles and priorities to determining team velocity, setting sprint length, and conducting customer reviews. Coverage includes Bringing teams and new team members on board Creating a workable definition of "done" Planning for short-term wins, and removing impediments to success Balancing predictability and adaptability in release planning Running productive daily scrums Fixing failing sprints Accurately costing projects, and measuring the value they deliver Managing risks in dynamic Scrum projects Prioritizing and estimating backlogs Working with distributed and offshore teams Institutionalizing improvements, and extending agility throughout the organization Packed with

real-world examples straight from Lacey's experience, this book will be invaluable to anyone transitioning to Scrum, seeking to improve their early results, or trying to get back on track.

Posthuman Management Matthew E. Gladden, 2016-08-07 What are the best practices for leading a workforce in which human employees have merged cognitively and physically with electronic information systems and work alongside social robots, artificial life-forms, and self-aware networks that are 'colleagues' rather than simply 'tools'? How does one manage organizational structures and activities that span actual and virtual worlds? How are the forces of technological posthumanization transforming the theory and practice of management? This volume explores the reality that an organization's workers, managers, customers, and other stakeholders increasingly comprise a complex network of human agents, artificial agents, and hybrid human-synthetic entities. The first part of the book develops the theoretical foundations of an emerging 'organizational posthumanism' and presents frameworks for understanding and managing the evolving workplace relationship between human and synthetic beings. Other chapters investigate topics such as the likelihood that social robots might utilize charismatic authority to lead human workers; potential roles of AIs as managers of cross-cultural virtual teams; the ethics and legality of entrusting organizational decision-making to spatially diffuse robots that have no discernible physical form; quantitative approaches to comparing managerial capabilities of human and artificial agents; the creation of artificial life-forms that function as autonomous enterprises competing against human businesses; neural implants as gateways that allow human users to participate in new forms of organizational life; and the implications of advanced neuroprosthetics for information security and business model design. As the first comprehensive application of posthumanist methodologies to management, this volume will interest management scholars and management practitioners who must understand and guide the forces of technologization that are rapidly reshaping organizations' form, dynamics, and societal roles.

Aquatic Synthesis for Voyageurs National Park ,2003 Voyageurs National Park (VOYA) in northern Minnesota contains significant aquatic resources including 30 lakes and numerous wetlands. This synthesis contains an integrated account of what is known about the aquatic resources of VOYA; compares VOYA resources to those of other areas; and identifies opportunities and needs for future studies and surveys. Surveys and studies in VOYA have identified fifty-four fish species from 16 families 820 vascular plant species and 7 amphibian and 3 reptile species (higher numbers probably occur). Estimates of relative abundance for phyto- and zooplankton vary among VOYA lakes and depths surveyed. The VOYA fish populations and communities have been the most intensively studied.

Twenty-eight percent of VOYA wetlands are the result of beaver activity. Mercury contamination and its food-chain bioaccumulation in VOYA are of particular concern. An integrated monitoring plan is needed in VOYA to provide continuous data and information on the complex physical chemical, and biological factors that influence aquatic systems. Resource managers in VOYA will use this information to understand and explain observed changes and to predict the potential for future changes.

Proceedings of the 21st Congress of the International Ergonomics Association (IEA 2021) Nancy L. Black, W. Patrick Neumann, Ian Noy, 2021-04-30 This book presents the proceedings of the 21st Congress of the International Ergonomics Association (IEA 2021), held online on June 13-18, 2021. By highlighting the latest theories and models, as well as cutting-edge technologies and applications, and by combining findings from a range of disciplines including engineering, design, robotics, healthcare, management, computer science, human biology and behavioral science, it provides researchers and practitioners alike with a comprehensive, timely guide on human factors and ergonomics. It also offers an excellent source of innovative ideas to stimulate future discussions and developments aimed at applying knowledge and techniques to optimize system performance, while at the same time promoting the health, safety and wellbeing of individuals. The proceedings include papers from researchers and practitioners, scientists and physicians, institutional leaders, managers and policy makers that contribute to constructing the Human Factors and Ergonomics approach across a variety of methodologies, domains and productive sectors. This volume includes papers addressing the following topics: Activity Theories for Work Analysis and Design (ATWAD), Organisation design and management (ODAM), Ergonomic Work Analysis and Training (EWAT), Systems HF/E, HF/E Education and Professional Certification Development.

Managing Electronic Media Joan Van Tassel, 2012-09-10 This college-level media management textbook reflects the changes in the media industries that have occurred in the past decade. Today's managers must address new issues that their predecessors never faced, from the threats of professional piracy and casual copying of digital media products, to global networks, on-demand consumption, and changing business models. The book explains the new new vocabulary of media moguls, such as bandwidth, digital rights management, customer relations management, distributed work groups, centralized broadcast operations, automated playlists, server-based playout, repurposing, mobisodes, TV-to-DVD, and content management. The chapters logically unfold the ways that managers are evolving their practices to make content, market it, and deliver it to consumers in a

competitive, global digital marketplace. In addition to media companies, this book covers management processes that extend to all content-producing organizations, because today's students are as likely to produce high-quality video and Web video for ABC Computer Sales as they are for the ABC Entertainment Television Network.

Borderline Personality and Mood Disorders Lois W. Choi-Kain, John G. Gunderson, 2014-10-24 In *Borderline Personality and Mood Disorders: Comorbidity and Controversy*, a panel of distinguished experts reviews the last two decades of progress in scientific inquiry about the relationship between mood and personality disorders and the influence of this empirical data on our ways of conceptualizing and treating them. This comprehensive title opens with an introduction defining general trends both influencing the expansion of the mood disorder spectrum and undermining clinical recognition and focus on personality disorders. The overlaps and differences between MDD and BPD in phenomenology and biological markers are then reviewed, followed by a review of the overlaps and distinctions between more atypical mood disorder variants. Further chapters review the current state of thinking on the distinctions between bipolar disorder and BPD, with attention to problems of misdiagnosis and use of clinical vignettes to illustrate important distinguishing features. Two models explaining the relationship between mood, temperament, and personality are offered, followed by a review of the literature on risk factors and early signs of BPD and mood disorders in childhood through young adulthood as well as a review of the longitudinal studies on BPD and mood disorders. The last segment of the book includes three chapters on treatment. The book closes with a conclusion with a synthesis of the current status of thinking on the relationship between mood and borderline personality disorder. An invaluable contribution to the literature, *Borderline Personality and Mood Disorders: Comorbidity and Controversy* insightfully addresses the mood and personality disorders realms of psychiatry and outlines that it has moved away from contentious debate and toward the possibility of synthesis, providing increasing clarity on the relationship between mood and personality to inform improvements in clinical management of the convergence of these psychiatric domains in common practice.

Becoming a Teacher Educator Anja Swennen, Marcel van der Klink, 2008-11-06 *Becoming a Teacher Educator* is an impressive book for teacher educators who want to be informed about the latest views and practices of their profession. It is the first book that addresses a range of topics related to the work of teacher educators, the induction of teacher educators and their further professional development. *Becoming a Teacher Educator* has a practical focus and it provides

theoretical insights, experiences of experts and practical recommendations. The book is rooted in the Association of Teacher Education in Europe (ATEE) and many of the chapters are written by authors who are active members of the ATEE. Researchers and practitioners from different parts of Europe, and beyond, joined their efforts to write a book that is truly international and combines research, practice and reflection. *Becoming a Teacher Educator* is essential reading for novice teacher educators as well as for experienced teacher educators who want to keep up with the latest insights in their profession. This book provides a guide for those who supervise novice and experienced teacher educators and for various professionals who are responsible for the professional development of teacher educators. There is a growing need for evidence-based resources made available to (future) teacher educators. Since a learning society requires new sets of competencies of the main actors, we are most in want of knowledgeable teacher educators that support the professional development of their (student) teachers. This book fits the actual demands. (Dr. Joost Lowyck, Professor Emeritus, former director of the Teacher Education Institute, Leuven University). This is an original book in a very important area. The editors define the concept of ‘teacher educator’ widely and I think, therefore, that the book is relevant for schools, higher education, and education authorities of all kinds. The authorship and theme have wide relevance across Europe, Australasia and North America. (Prof. Bob Moon, Professor in Education Teaching Studies, Department of Education, Open University, UK). The book highlights that, while the current global focus is very much on the need to educate sufficient and highly qualified teachers, little political focus is given to those who teach the teachers. What makes this book distinctive for all engaged in teacher education, whether experienced or novice, is that it allows the spotlight on those who teach the teachers and the opportunity for teacher educators to discuss, debate and seriously examine themselves as a profession. (Simone White, Deakin University, Australia)

Speech-to-Speech Translation Yutaka Kidawara, Eiichiro Sumita, Hisashi Kawai, 2019-11-22 This book provides the readers with retrospective and prospective views with detailed explanations of component technologies, speech recognition, language translation and speech synthesis. Speech-to-speech translation system (S2S) enables to break language barriers, i.e., communicate each other between any pair of person on the globe, which is one of extreme dreams of humankind. People, society, and economy connected by S2S will demonstrate explosive growth without exception. In 1986, Japan initiated basic research of S2S, then the idea spread world-wide and were explored deeply by researchers during three decades. Now, we see S2S application on smartphone/tablet around the

world. Computational resources such as processors, memories, wireless communication accelerate this computation-intensive systems and accumulation of digital data of speech and language encourage recent approaches based on machine learning. Through field experiments after long research in laboratories, S2S systems are being well-developed and now ready to utilized in daily life. Unique chapter of this book is end-2-end evaluation by comparing system’s performance and human competence. The effectiveness of the system would be understood by the score of this evaluation. The book will end with one of the next focus of S2S will be technology of simultaneous interpretation for lecture, broadcast news and so on.
