Georgia from National Awakening to Rose Revolution Jonathan Wheatley, 2017-05-15 Jonathan Wheatley examines the tortuous process of regime change in Georgia from the first pro-independence protests of 1988 to the aftermath of the so-called Rose Revolution in 2004. It is set within a comparative framework that includes other transition countries, particularly those in the former Soviet Union. The book provides two important theoretical innovations: the notion of a regime, which is an under-theorized concept in the field of transition literature, and O'Donnell, Schmitter and Karl's notion of a dynamic actor-driven transition. The volume turns to the structural constraints that framed the transition in Georgia and in other republics of the former Soviet Union by looking at the state and society in the USSR at the close of the Soviet period. It examines the evolution and nature of the Georgian regime, and ultimately addresses the theoretical and empirical problems posed by Georgia's so-called Rose Revolution following the falsification of parliamentary elections by the incumbent authorities.

The Shark's Paintbrush Jay Harman, 2013-06-25 The wave of the future has been around since the beginning of times: it's called Nature. Let inventor and entrepreneur Jay Harman introduce you to stunning solutions to some of the world's thorniest problems. Why does the bumblebee have better aerodynamics than a 747? How can copying a butterfly wing reduce the world's lighting energy bill by 80%? How will fleas' knees and bees' shoulders help scientists formulate a near-perfect rubber? Today an interdisciplinary and international group of scientists, inventors and engineers is turning to nature to innovate and find elegant solutions to human problems. The principle driving this transformation is called biomimicry, and Harman shares a wide range of examples of how we're borrowing from natural models to invent profitable, green solutions to pressing industrial challenges. Aimed at a business audience, aspiring entrepreneurs, environmentalists and general science readers, The Shark's Paintbrush reflects a force of change in the new global economy that does more than simply gratify human industrial ambition; it teaches us how to live in harmony with nature and opens bright opportunities for a better future.

The One Belt One Road (OBOR) Initiative and the Port of Piraeus Tatiana Gontika, 2021-08-05 This book provides the reader with a better understanding of the One Belt One Road (OBOR) initiative, its various projects around the world, and its consequences at a local as well as an international level. Background information on both Chinese and Greek sociopolitical history and their maritime industry is provided. The book also provides readers with the opinions of people directly involved with the Piraeus Port—China Ocean Shipping (Group) Company (COSCO) deal through interviews conducted and included in the book. OBOR, a signature initiative of Chinese President Xi Jinping, is currently one of the most frequently discussed enterprises worldwide. This controversial mix of worldwide projects has put both China and Xi at the center of attention, and not in a positive way. Of course, not all projects included in the initiative have been or are likely to be successful, but the initiative has far-ranging economic, cultural, and political potential. OBOR, in its essence, is an attempt by the Chinese government to secure a paramount position in global finance for the country and ensure that primacy extends far into the future. In particular, it is an attempt to ensure that there are enough natural resources for China to support itself in the long term. Therefore, the areas selected for the implementation and development of OBOR are deliberately strategic. One of the countries that China has chosen to invest in is Greece, specifically the Port of Piraeus. The OBOR initiative has many similarities with the ancient Silk Road. Although the ancient route and modern concept are in no way identical, many similarities become evident when the two are compared. To understand China's motivation to build such a network, looking back at history is required. This project was long in the making. Various discussions took place both on an international and a domestic level until all parties came to an agreement. The deal at Piraeus between Greece and China affected more people than the politicians and the shipowners—it affected everyone involved in the operations of the port as well as the residents of the area. To further comprehend the impact on their lives, one must see things through their eyes, and there is no better way than contacting individuals and conversing with them. In conclusion, the specific deal at Piraeus and the OBOR initiative as a whole have the potential of benefiting the international and local communities. However, specific measures must be taken, and governments must collaborate in order for the deal in Piraeus and the OBOR initiative to have the most beneficial and the least negative impact.

Regional Security Rodrigo Tavares, 2009-12-16 Regional organizations are an inescapable feature of global politics. Virtually all countries in the world are members of at least one regional or other intergovernmental organization. The involvement of international organizations in the realm of regional peace and security, and their cooperation in this domain with the United Nations, has reached an unprecedented level. Regional organizations have traditionally been formed around economic, political, or environmental objectives, however, over the last decades these organizations have gradually penetrated into the security sphere and developed their capacities in conflict prevention, peacekeeping, or post-war reconstruction. In Europe, Africa, Asia, or the Americas, regional and other intergovernmental organizations have been concurrently empowered by the UN and their own member states to maintain peace and security. Despite suffering from important discrepancies in both their mandates and capacities, regional organizations have become indisputable actors that play a role from the outbreak of a crisis to the reconstruction efforts in the aftermath of a conflict. Presenting the most up-to-date critical and comparative analysis of the major regional security institutions, assessing a wide range of regional organizations and providing an accessible and comprehensive guide to 11 key organizations, this book is the first systematic study of the capacities of the most recognized intergovernmental organizations with a security mandate. Regional Security is essential reading for all students of international organizations, peace and security studies and global governance.

Maps, Myths, and Men Kirsten A. Seaver, 2004 The Vínland Map first surfaced on the antiquarian market in 1957 and the map's authenticity has been hotly debated ever since—in controversies ranging from the anomalous composition of the ink and the map's lack of provenance to a plethora of historical and cartographical riddles. Maps, Myths, and Men is the first work to address the full range of this debate. Focusing closely on what the map in fact shows, the book contains a critique of the 1965 work The Vinland Map and the Tartar Relation; scrutinizes the marketing strategies used in 1957; and covers many aspects of the map that demonstrate it is a modern fake, such as literary evidence and several scientific ink analyses performed between 1967 and 2002. The author explains a number of the riddles and provides evidence for both the identity of the mapmaker and the source of the parchment used, and she applies current knowledge of medieval Norse culture and exploration to counter widespread misinformation about Norse voyages to North America and about the Norse world picture.

You William B. Irvine, 2018-09-07 What are you? Obviously, you are a person with human ancestors that can be plotted on a family tree, but you have other identities as well. According to evolutionary biologists, you are a member of the species Homo sapiens and as such have ancestral species that can be plotted on the tree of life. According to microbiologists, you are a collection of cells, each of which has a cellular ancestry that goes back billions of years. A geneticist, though, will think of you primarily as a gene-replication machine and might produce a tree that reveals the history of any given gene. And finally, a physicist will give a rather different answer to the identity question: you can best be understood as a collection of atoms, each of which has a very long history. Some have been around since the Big Bang, and others are the result of nuclear fusion

that took place within a star. Not only that, but most of your atoms belonged to other living things before joining you. From your atoms' point of view, then, you are just a way station on a multibillion-year-long journey. You: A Natural History offers a multidisciplinary investigation of your hyperextended family tree, going all the way back to the Big Bang. And while your family tree may contain surprises, your hyperextended history contains some truly amazing stories. As the result of learning more about who and what you are, and about how you came to be here, you will likely see the world around you with fresh eyes. You will also become aware of all the one-off events that had to take place for your existence to be possible: stars had to explode, the earth had to be hit 4.5 billion years ago by a planetesimal and 65 million years ago by an asteroid, microbes had to engulf microbes, the African savanna had to undergo climate change, and of course, any number of your direct ancestors had to meet and mate. It is difficult, on becoming aware of just how contingent your own existence is, not to feel very lucky to be part of our universe.

Offshore Risk Assessment vol 1. Jan-Erik Vinnem, 2013-08-24 Offshore Risk Assessment was the first book to deal with quantified risk assessment (QRA) as applied specifically to offshore installations and operations. Risk assessment techniques have been used for more than three decades in the offshore oil and gas industry, and their use is set to expand increasingly as the industry moves into new areas and faces new challenges in older regions. This updated and expanded third edition has been informed by a major R&D program on offshore risk assessment in Norway and summarizes research from 2006 to the present day. Rooted with a thorough discussion of risk metrics and risk analysis methodology, subsequent chapters are devoted to analytical approaches to escalation, escape, evacuation and rescue analysis of safety and emergency systems. Separate chapters analyze the main hazards of offshore structures: fire, explosion, collision, and falling objects as well as structural and marine hazards. Risk mitigation and control are discussed, as well as an illustration of how the results from quantitative risk assessment studies should be presented. The third second edition has a stronger focus on the use of risk assessment techniques in the operation of offshore installations. Also decommissioning of installations is covered. Not only does Offshore Risk Assessment describe the state of the art of QRA, it also identifies weaknesses and areas that need further development. This new edition also illustrates applications or quantitative risk analysis methodology to offshore petroleum applications. A comprehensive reference for academics and students of marine/offshore risk assessment and management, the book should also be owned by professionals in the industry, contractors, suppliers, consultants and regulatory authorities.

Nuclear Weapons Free Zones Exequiel Lacovsky, 2021-03-09 This book explores the conditions under which Nuclear Weapons Free Zones (NWFZs) can be established. It analyzes four hypotheses that explain the factors contributing to the formation of NWFZs, building upon realist, constructivist and liberal theories from international relations. Through structured focused comparison, the book presents and compares the emergence of NWFZs in Latin America, the South Pacific, Southeast Asia, Africa, Central Asia, and the Middle East, which is a prospect for a NWFZ. The book argues that NWFZ projects depend on the following conditions: the security interest of regional states in avoiding nuclear threats, preexisting regional institutions and regional economic cooperation, leadership by a core of regional powers and shared interest in spreading non-proliferation norms. Democracy is not a necessary condition, but democratization can help overcome barriers presented by hesitant or opposed regional governments. As too many of the mentioned necessary conditions are lacking in the Middle East, a NWFZ project, thus, will be possible only after major political changes. This book will be of much interest to students of nuclear proliferation, arms control, security studies and International Relations.
