Return to Moscow Anthony Charles Kevin, 2017 Forty-eight years ago, a young and apprehensive Tony Kevin set off with his family on his first diplomatic posting, to Moscow at the height of the Cold War. In the Russian winter of 2016 he returns alone, a private citizen, aged 73. What will he find? How has Russia changed since those grim Soviet days? Tony Kevin had a successful and challenging diplomatic career, ending with ambassadorships to Poland (1991-94) and Cambodia (1994-97). He now applies his attention to Vladimir Putin's Russia, a government and nation routinely demonized and disdained in Western capitals. Why does President Putin arouse such a high level of Western antagonism? Is the West throwing away the lessons of recent history in recklessly drifting into a perilous and unnecessary new Cold War confrontation against Russia? The author invites readers to see this great nation anew: to explore with him the complex roots of Russian national identity and values, drawing on its traumatic recent seventy-year Soviet Communist past and its momentous thousand-year history as a great Orthodox Christian nation that has both loved and feared 'the West, ' and which the West has loved and feared back in equal measure. Tony Kevin's previous books include *A Certain Maritime Incident: the sinking of SIEV X* (2004) and *Reluctant Rescuers* (2012) on Australia's well-resourced maritime border protection system. He published a travel memoir *Walking the Camino* (2007) about his long pilgrimage walk through Spain in 2006. In 2009, *Crunch Time* tackled issues, still unresolved, of framing an effective Australian policy against global warming. [Subject: Non-Fiction, Travel Memoir, Russian Studies]

Russia and the West Anthony Charles Kevin, Tony Kevin, 2019 *RUSSIA AND THE WEST: THE LAST TWO ACTION-PACKED YEARS 2017-19* TONY KEVIN With a new Author Preface What has happened to Australia's former well-deserved reputation as a liberal democracy open to the free discussion of ideas? What happens to an established Australian non-fiction author whose literary work strays outside Noam Chomsky's spectrum of permitted issues for public discussion? Tony Kevin's challenging new book offers a vivid account of how he was 'de-platformed', that is to say, effectively excluded from the public marketplace in ideas, during the two years following publication of his controversial fifth book, *Return to Moscow* (UWA Publishing, 2017). His new book poses the question, how free actually is Australia's publishing and mainstream media world, when it becomes so difficult for a writer to challenge established anti-Russian false public narratives, without suffering covert retaliation and silent exclusion? In reviewing major events and issues in Russia-West relations over the past two tumultuous years, Tony Kevin explores how deliberate Western disinformation campaigns - on issues like the war in Ukraine, Syria, the Skripals Affair, and Russiagate - are now at the centre of Western policy efforts to try to demoralise and weaken the great nation which they have chosen to frame as their existential adversary. Possibilities for East-West dialogue and relaxation of tensions are being rejected, in the interests of maintaining a Western perception of Russia as an enemy state. In Australia at least, such disinformation efforts have borne poisonous fruit - as Tony Kevin's troubling experience as a writer increasingly excluded from the public space shows.

Tree Islands of the Everglades Fred H. Sklar, Arnold van der Valk, 2012-12-06 PREFACE Within the Florida Everglades, tree islands, which cover only a small percent of this ecosystem, historically have provided essential habitat for a wide variety of terrestrial and amphibious plants, birds, and animals. These tree islands, however, have been one of its least studied features. Because of their less flood tolerant vegetation, tree islands are one of the most sensitive components of the Everglades to changes in hydrology, and many tree islands have been lost during periods when water levels have been abnormally high or low. Their sensitivity to water level changes makes tree islands potentially one of the best and surest measures of the overall hydrologic health of the Everglades. Consequently, the maintenance of healthy, functioning tree islands and the restoration of those that have been lost

will be an important performance measures that will be used to judge the success of the Comprehensive Everglades Restoration Plan (CERP). A symposium, Tree Islands of the Everglades, was held on July 14 and 15, 1998 at Florida Atlantic University, Boca Raton, Florida. It was sponsored by Florida Center for Environmental Studies and the South Florida Water Management District. This was the first scientific meeting ever devoted to tree islands. The organizers of this symposium were Drs. Arnold van der Valk, Florida Center for Environmental Studies and Iowa State University, Fred Sklar, South Florida Water Management District, and Wiley Kitchens, United States Geological Survey.

Hypoxia in the Northern Gulf of Mexico Virginia H. Dale, Catherine L. Kling, Judith L. Meyer, James Sanders, Holly Stallworth, Thomas Armitage, David Wangsness, Thomas Bianchi, Alan Blumberg, Walter Boynton, Daniel J. Conley, William Crumpton, Mark David, Denis Gilbert, Robert W. Howarth, Richard Lowrance, Kyle Mankin, James Opaluch, Hans Paerl, Kenneth Reckhow, Andrew N. Sharpley, Thomas W. Simpson, Clifford S. Snyder, Donelson Wright, 2010-04-12 Since 1985, scientists have been documenting a hypoxic zone in the Gulf of Mexico each year. The hypoxic zone, an area of low dissolved oxygen that cannot support marine life, generally manifests itself in the spring. Since marine species either die or leave the hypoxic zone, the spread of hypoxia reduces the available habitat for marine species, which are important for the ecosystem as well as commercial and recreational fishing in the Gulf. Since 2001, the hypoxic zone has averaged 216,500 km during its peak summer months, an area slightly larger than the state of Connecticut, and ranged from a low of 8,500 km to a high of 22,000 km. To address the hypoxia problem, the Mississippi River/Gulf of Mexico Watershed Nutrient Task Force (or Task Force) was formed to bring together representatives from federal agencies, states, and tribes to consider options for responding to hypoxia. The Task Force asked the White House Office of Science and Technology Policy to conduct a scientific assessment of the causes and consequences of Gulf hypoxia through its Committee on Environment and Natural Resources (CENR).

The Coastal Everglades Daniel L. Childers, Evelyn Gaiser, Laura A. Ogden, 2019 The Coastal Everglades presents a broad overview and synthesis of research on the coastal Everglades, a region that includes Everglades National Park, adjacent managed wetlands, and agricultural and urbanizing communities. Contributors for this volume are all collaborators on the Florida Coastal Everglades Long-Term Ecological Research Program (FCE LTER). The FCE LTER began in 2000 with a focus on understanding key ecosystem processes in the coastal Everglades, while also developing a platform for and linkages to related work conducted by an active and diverse Everglades research community. The program is based at Florida International University in Miami, but includes scientists and students from numerous other universities as well as staff scientists at key resource management agencies, including Everglades National Park and the South Florida Water Management District. Though the Everglades landscape spans nearly a third of the State of Florida, the focus on the coastal Everglades has allowed the contributors to examine key questions in social-ecological science in the context of ongoing restoration initiatives. As this book demonstrates, the long-term research of the FCE LTER has facilitated a better understanding of the roles of sea level rise, water management practices, urban and agricultural development, and other disturbances, such as fires and storms, on the past and future dynamics of this unique coastal environment. By comparing properties of the Everglades with other subtropical and tropical wetlands, the book challenges ideas of novelty while revealing properties of ecosystems at the ends of gradients that are often ignored. It also provides insights from, and encouragement for, long-term collaborative studies that inform resource management in similarly threatened coastal wetland landscapes.

Gladesmen Glen Simmons, Laura Ogden, 2010-09-05 Few people today can claim a living memory of Florida's frontier Everglades. Glen Simmons, who has hunted alligators, camped on hammock-covered islands, and poled his skiff through the mangrove swamps of the glades since the 1920s, is one who can. Together with Laura Ogden, he tells the story of backcountry life in the southern Everglades from his youth until the establishment of the Everglades National Park in 1947. During the economic bust of the late '20s, when many natives turned to the land to survive, Simmons began accompanying older local men into Everglades backcountry, the inhospitable prairie of soft muck and mosquitoes, of outlaws and moonshiners, that rings the southern part of the state. As Simmons recalls life in this community with humor and nostalgia, he also documents the forgotten lifestyles of south Florida gladesmen. By necessity, they understood the natural features of the Everglades ecosystem. They observed the seasonal fluctuations of wildlife, fire, and water levels. Their knowledge of the mostly unmapped labyrinth of grassy water enabled them to serve as guides for visiting naturalists and scientists. Simmons reconstructs this world, providing not only fascinating stories of individual personalities, places, and events, but an account that is accurate, both scientifically and historically, of one of the least known and longest surviving portions of the American frontier.

Mosaic Landscapes and Ecological Processes L. Hansson, L. Fahrig, G. Merriam, 2012-12-06 This series presents studies that have used the paradigm of landscape ecology. Other approaches, both to landscape and landscape ecology are common, but in the last decade landscape ecology has become distinct from its predecessors and its contemporaries. Landscape ecology addresses the relationships among spatial patterns, temporal patterns and ecological processes. The effect of spatial configurations on ecological processes is fundamental. When human activity is an important variable affecting those relationships, landscape ecology includes it. Spatial and temporal scales are as large as needed for comprehension of system processes and the mosaic included may be very heterogeneous. Intellectual utility and applicability of results are valued equally. The International Association for Landscape Ecology sponsors this series of studies in order to introduce and disseminate some of the new knowledge that is being produced by this exciting new environmental science. Gray Merriam Ottawa, Canada Foreword This is a book about real nature, or as close to real as we know - a nature of heterogeneous landscapes, wild and humanized, fine-grained and coarse-grained, wet and dry, hilly and flat, temperate and not so temperate. Real nature is never uniform. At whatever spatial scale we examine nature, we encounter patchiness. If we were to look down from high above at a landscape of millions of hectares, using a zoom lens to move in and out from broad overview to detailed inspection of a square meter we would see that patterns visible at different scales overlay one another.

Lightning Vladimir A. Rakov, Martin A. Uman, 2007-01-08 Lightning: Physics and Effects is the first book that covers essentially all aspects of lightning, including lightning physics, lightning protection and the interaction of lightning with a variety of objects and systems as well as with the environment. It is written in a style that will be accessible to the technical non-expert and is addressed to anyone interested in lightning and its effects. This will include physicists, engineers working in the power, communications, computer and aviation industries, meteorologists, atmospheric chemists, foresters, ecologists, physicians working in the area of electrical trauma and architects. This comprehensive reference volume contains over 300 illustrations, 70 tables containing quantitative information and a bibliography of more than 6000 references.

Walking the Camino Tony Kevin, 2009-05-01 In May 2006, armed only with a small rucksack and a staff, Tony Kevin, an overweight, sedentary, 63-year-old former diplomat, set off on an eight-week trek across Spain. But this was not just a very long walk it was a pilgrimage.--Provided by publisher.

"Sprites, Elves and Intense Lightning Discharges" Martin Füllekrug, Eugene A. Mareev, Michael J Rycroft, 2006-05-27 Particularly intense lightning discharges can produce transient luminous events above thunderclouds, termed sprites, elves and jets. These short lived optical emissions in the mesosphere can reach from the tops of thunderclouds up to the ionosphere; they provide direct evidence of coupling from the lower atmosphere to the upper atmosphere. Sprites are arguably the most dramatic recent discovery in solar-terrestrial physics. Shortly after the first ground based video recordings of sprites, observations on board the Space Shuttle detected sprites and elves occurring all around the world. These reports led to detailed sprite observations in North America, South America, Australia, Japan, and Europe. Subsequently, sprites were detected from other space platforms such as the International Space Station and the ROCSAT satellite. During the past 15 years, more than 200 contributions on sprites have been published in the scientific literature to document this rapidly evolving new research area.

A Certain Maritime Incident Tony Kevin, 2004 In October 2001, over 400 asylum-seekers departed from Indonesia in a grossly overcrowded, rickety boat bound for Australia. Somewhere between the two countries the boat sank with a huge loss of life - 353 of the asylum seekers drowned. The Australian government claimed it had no prior knowledge of this unfolding tragedy, and had no responsibility for it. Yet ministers and senior officials from the beginning tried to mislead the Australian Senate and the community over important questions. What did the government and its agencies know about the boat and its fate, and when? Did we have any responsibility for the tragedy? Did we have a duty of care to save the survivors that we shirked? A Certain Maritime Incident joins the dots for the first time to reveal a disquieting record of government misconduct, including Australian Federal Police involvement in a people-smuggling 'disruption program', and an extraordinary combination of stonewalling and professed ignorance by a government dedicated to micromanaging the deterrence of asylum-seeker voyages.
