The Pyramids and the Pentagon Nick Redfern, 2012-06-22 The Pyramids and the Pentagon is a detailed study of how and why government agencies have, for decades, taken a clandestine and profound interest in numerous archeological, historical, and religious puzzles. Focusing primarily upon the classified work of the U.S. Government, The Pyramids and the Pentagon invites you to take a wild ride into the fog-shrouded past. It's a ride that incorporates highlights such as: The CIA's top-secret files on Noah's Ark U.S. Army documents positing that the Egyptian Pyramids were constructed via levitation Disturbing military encounters with Middle Eastern djinns Claims of nuclear warfare in ancient India Links between the Face on Mars and the pharaohs And many more Nick Redfern's The Pyramids and the Pentagon clearly and provocatively demonstrates that deep and dark conspiracies exist within the shadowy world of officialdom--conspiracies that have the ability to rock the foundations of civilization, religion, and history to their very core. The strange and amazing secrets of the past are just a heavily guarded government vault away.

Estimate Technology Ciano Aydin, 2021-01-21 This book investigates how we should form ourselves in a world saturated with technologies that are profoundly intruding in the very fabric of our selfhood. New and emerging technologies, such as smart technological environments, imaging technologies and smart drugs, are increasingly shaping who and what we are and influencing who we ought to be. How should we adequately understand, evaluate and appreciate this development? Tackling this question requires going beyond the persistent and stubborn inside-outside dualism and recognizing that what we consider our inside self is to a great extent shaped by our outside world. Inspired by various philosophers - especially Nietzsche, Peirce and Lacan - this book shows how the values, goals and ideals that humans encounter in their environments not only shape their identities but also enable them to critically relate to their present state. The author argues against understanding technological self-formation in terms of making ourselves better, stronger and smarter. Rather, we should conceive it in terms of technological sublimation, which redefines the very notion of human enhancement. In this respect the author introduces an alternative, more suitable theory, namely Technological Sublimation Theory (TST). Estimate Technology will be of interest to scholars and advanced students working in philosophy of technology, philosophy of the self, phenomenology, pragmatism, and history of philosophy. Genesis of the Shakespearean Works Peter D Matthews, 2017-06-11 This book is the result of fourteen years research scrutinizing thousands of historical documents. Dr Matthews reveals never before seen facts regarding the earliest quartos and the first folio - even new research into the leather cover of the Bodleian first folio and how that particular copy came into the possession of the Turbutt family. Dr Matthews has forensically dated the majority of the Shakespearean plays twenty years before earlier scholars, such as Rowe, Malone and Chambers - some plays dated as early as 1561, 1559 and 1558 - up to six years before William Shakespeare was born. Dr Matthews' exemplary philosophical dissertation of the Shakespearean works and its critics, reveals much about the identity of the real authors. A unique reference work essential to Shakespearean scholars and students alike - this crucial work redates the Shakespearean works, scrutinizes each candidate, and definitively answers the authorship debate.

Material Agency Carl Knappett, Lambros Malafouris, 2008-12-15 Thus far an 'agent' in the social sciences has always meant someone whose actions bring about change. In this volume, the editors challenge this position and examine the possibility that agency is not a solely human property. Instead, this collection of archaeologists, anthropologists, sociologists and other social scientists explores the symbiotic relationships between humans and material entities (a key opening a door, a speed bump raising a car) as they engage with one another.

Evolutionary Based Solutions for Green Computing Samee Ullah Khan, Joanna Kołodziej, Juan Li, Albert Y.

Zomaya,2012-08-14 Today's highly parameterized large-scale distributed computing systems may be composed of a large number of various components (computers, databases, etc) and must provide a wide range of services. The users of such systems, located at different (geographical or managerial) network cluster may have a limited access to the system's services and resources, and different, often conflicting, expectations and requirements. Moreover, the information and data processed in such dynamic environments may be incomplete, imprecise, fragmentary, and overloading. All of the above mentioned issues require some intelligent scalable methodologies for the management of the whole complex structure, which unfortunately may increase the energy consumption of such systems. An optimal energy utilization has reached to a point that many information technology (IT) managers and corporate executives are all up in arms to identify scalable solution that can reduce electricity consumption (so that the total cost of operation is minimized) of their respective large-scale computing systems and simultaneously improve upon or maintain the current throughput of the system. This book in its eight chapters, addresses the fundamental issues related to the energy usage and the optimal low-cost system design in high performance ``green computing'' systems. The recent evolutionary and general metaheuristic-based solutions for energy optimization in data processing, scheduling, resource allocation, and communication in modern computational grids, could and network computing are presented along with several important conventional technologies to cover the hot topics from the fundamental theory of the ``green computing'' concept and to describe the basic architectures of systems. This book points out the potential application areas and provides detailed examples of application case studies in low-energy computational systems. The development trends and open research issues are also outlined. All of those technologies have formed the foundation for the green computing that we know of today.

The History of Greece Elaine Thomopoulos,2011-12-13 This complete history of Greece documents ancient times to the present, giving specific attention to its emergence as a modern European nation after the destruction, disease, and death Greece suffered during World War II and the subsequent civil war. Modern Greece started as a monarchy in 1832, with just a fraction of the land it now encompasses. The nation of Greece finally forged its identity in the 19th and 20th centuries after emerging from 400 years of Ottoman domination. This book traces the development of Greece from the Minoan civilization of Crete to modern times, telling the story of how Greece added territory and experienced fierce growing pains—including coups, dictatorships, depressions, enormous influxes of immigrants, and wars—before evolving into today's modern democratic state. The History of Greece provides both an overview of Greece's early history as well as an examination of the difficulties that emerged in 2009 and 2010, such as its recent financial problems and social unrest. Quotes from Greek politicians, scholars, poets, and ordinary citizens are included to communicate Greece's national character.

The Future of Translation Technology Chan Sin-wai,2016-10-26 Technology has revolutionized the field of translation, bringing drastic changes to the way translation is studied and done. To an average user, technology is simply about clicking buttons and storing data. What we need to do is to look beyond a system's interface to see what is at work and what should be done to make it work more efficiently. This book is both macroscopic and microscopic in approach: macroscopic as it adopts a holistic orientation when outlining the development of translation technology in the last forty years, organizing concepts in a coherent and logical way with a theoretical framework, and predicting what is to come in the years ahead; microscopic as it examines in detail the five stages of technology-oriented translation procedure and the strengths and weaknesses of the free and paid systems available to users. The Future of Translation Technology studies, among other issues: The Development of Translation Technology Major Concepts in Computer-aided Translation Functions in Computer-aided Translation Systems A Theoretical Framework for Computer-Aided Translation Studies The Future of Translation Technology This book is an essential read for scholars and researchers of translational studies and computational linguistics, and a guide to system users and professionals.

Tappin' at the Apollo Cheryl M. Willis,2016-05-02 In the 1920s and 1930s, Edwina Salt Evelyn and Jewel Pepper Welch learned to tap dance on street corners in New York and Philadelphia. By the 1940s, they were Black show business headliners, playing Harlem's Apollo Theater with the likes of Count Basie, Fats Waller and Earl Fatha

Hines. Their exuberant tap style, usually performed by men, earned them the respect of their male peers and the acclaim of audiences. Based on extensive interviews with Salt and Pepper, this book chronicles for the first time the lives and careers of two overlooked female performers who succeeded despite the racism, sexism and homophobia of the Big Band era.
