Natural Resources, Sustainability and Humanity Angela Mendonca,Ana Cunha,Ranjan Chakrabarti,2012-04-17 Shortly, this book is the written up-graded version of the topics discussed during the Small Meeting of the 2nd International School Congress: Natural Resources, Sustainability and Humanity, held in Braga, Portugal, 5-8 May 2010 with the diverse participation of scientists, educators and governmental representatives. The Earth hosts an immense ecosystem, colonized by millions of species for billions of years but only for a few tens of thousands of years by humans. Environmental history tells though that it was humankind that shaped the environment as no other species. History, geography, religion and politics among other reasons have differentiated populations with respect to access to safe food and water, education, health, and to space and natural resource utilization. The globalization era of trade, information and communication is shortening distances and increasing overall wealth, but, as is pointed out in this book, it is also contributing to the propagation of diseases, and to the modification or even destruction of native ecosystems by exotic invasive species. Man is the only species that has the perception of its history, evolution, of the consequences of its decisions, and that there is a future ahead. It is also the only species that has the potential to change it. This awareness can be a source of anxiety and contradictory behaviours, but it is also the key to changing attitudes towards the construction of a common sustainable home, by committed education, interdisciplinary approaches, mobilization and empowerment of people and political consonant actions.

Greywater Reuse Amit Gross,Adi Maimon,Yuval Alfiya,Eran Friedler,2015-03-26 Greywater Reuse examines the features and implications of greywater reuse scientifically, quantitatively, and thoroughly. Based on the authors' extensive studies of treatment facilities in urban and rural environments, development of greywater treatment systems, and research of potential environmental and health risks posed by greywater at different treatment levels, this authoritative text: Describes the chemical, physical, and microbial properties of greywater Covers the treatment and removal of greywater pollutants, providing case studies of common methods Identifies the risks involved in greywater use and proposes regulatory measures to help reduce these risks Reviews the greywater management strategies, policies, and legislation of several different countries Discusses the prevailing public perception and willingness to adopt various uses of greywater Analyzes the economic impact of greywater reuse from both the consumer and national perspectives Greywater Reuse addresses all major aspects related to greywater reuse, making it a valuable resource for a variety of applications.

Agrimonde – Scenarios and Challenges for Feeding the World in 2050 Sandrine Paillard,Sébastien Treyer,Bruno Dorin,2014-04-14 How will the world be able to feed close to 9 billion people in 2050 and still maintain the ecosystems? In this perspective, INRA and CIRAD launched the initiative, in 2006, to develop a foresight project for analysing issues pertaining to the world's food and agricultural systems on the 2050 timeline. This book provides a synthetic presentation of the main conclusions that this foresight project has yielded. First, it recapitulates the main statistical references for the period 1961 to 2003, before going on to describe the Agribiom simulation tool used to calculate food biomass resource use balances. Two scenarios on the 2050 timeline are then considered: Agrimonde GO is a trend-based scenario that bets on economic growth to feed the world, in a context where environmental protection is not a priority; in contrast, the idea in Agrimonde 1 is to feed the world while preserving its ecosystems.

Drainage Basin Dynamics Pravat Kumar Shit,Biswajit Bera,Aznarul Islam,Sandipan Ghosh,Gouri Sankar Bhunia,2022-01-01 This volume provides a versatile introduction to the study of drainage basin evolution, morphology, drainage basin hydrology and sedimentology, human interference, natural and anthropogenic hazards and various management techniques. This book offers the responsible factors of sediment yield and their absolute and specific growth and rate of delivery through tributaries to the main streams. Rivers are important geomorphic agents which reflect an amazing variety of form and behaviour, showing the wide range of natural environment in which they are originated. The drainage system evolution and spatial network development within the dynamic nature are being discussed and how they are adjusted in the geomorphic time scale over the millions of years. This book shows how drainage systems function and react to change and why this thoughtful is required for flourishing integrated basin management. In tropical and sub-tropical countries population pressures as well as different developmental projects are being executed on the drainage basin without proper planning. Today scientists consider drainage basin as an administrative unit during implementation of regional projects. In this context this book will carry a bench mark for scholars and young scientists.

Self-Healing Systems and Wireless Networks Management Junaid Ahsenali Chaudhry,2013-10-21 Do you believe in open-source development? Would you like to see your security system grow and learn by itself? Are you sick of paying for software license fees every year that produce little return on investment? And, would you prefer to invest in something you could sell later on to other IT security departments? If you answered yes to these questions, then this is the book for you. Addressing the issues of fault identification and classification, Self-Healing Systems and Wireless Networks Management presents a method for identifying and classifying faults using causal reasoning—a powerful bottom up technique for deep surface and cross context correlation establishment. It explains how to employ a similarity matrix to match the user activity log and its pattern in a transformed space and discusses the development and deployment of a policy engine. The book describes how to use this self-growing policy engine in collaboration with a scheduler and plug-in bank to generate a healing policy. This healing policy presents the solution of the direct and causal fault. The author describes how to embed the solutions of the related faults in the healing policy so that if a client faces more faults related to the previous one, they can be addressed at the client side. Exploring prototype systems, the text defines supporting systems architectures and includes a case study of an autonomic healing-based self-management engine. It also explains how to fulfill the tasks in linear time, so that the increase in the source file size does not affect the performance of your system—making the system highly scalable for distributed self-healing systems. This book provides valuable guidance to help you build a self-growing, self -earning, self-healing system that, after development, learns for itself about the IT security vulnerabilities of your organization and fills the holes for future breach prevention.

Topological Data Structures for Surfaces Sanjay Rana,2004-05-21 In Geography and GIS, surfaces can be analysed and visualised through various data structures, and topological data structures describe surfaces in the form of a relationship between certain surface-specific features. Drawn from many disciplines with a strong applied aspect, this is a research-led, interdisciplinary approach to the creation, analysis and visualisation of surfaces, focussing on topological data structures. Topological Data Structures for Surfaces: an introduction for Geographical Information Science describes the concepts and applications of these data structures. The book focuses on how these data structures can be used to analyse and visualise surface datasets from a range of disciplines such as human geography, computer graphics, metrology, and physical geography. Divided into two Parts, Part I defines the topological surface data structures

and explains the various automated methods used for their generation. Part II demonstrates a number of applications of surface networks in diverse fields, ranging from sub-atomic particle collision visualisation to the study of population density patterns. To ensure that the material is accessible, each Part is prefaced by an overview of the techniques and application. Provides GI scientists and geographers with an accessible overview of current surface topology research. Algorithms are presented and explained with practical examples of their usage. Features an accompanying website developed by the Editor - http://geog.le.ac.uk/sanjayrana/surface-networks/ This book is invaluable for researchers and postgraduate students working in departments of GI Science, Geography and Computer Science. It also constitutes key reference material for Masters students working on surface analysis projects as part of a GI Science or Computer Science programme.

He Shall Have Dominion Kenneth L Gentry,2021-02-22 In this edition of this classic study of postmillennialism, you will sense anew the powerful message of Psalm 72 that Christ shall have dominion from sea to sea (Psa 72:8). You will learn that God's word boldly promises that the whole earth will be filled with his glory (72:19) so that all nations will call him blessed (72:17) - before Christ returns. Many evangelicals today are concerned about those being Left Behind on this Late Great Planet Earth as it collapses into absolute chaos. But the postmillennialist optimistically believes regarding Christ that He Shall Have Dominion throughout the earth. In this book you will find the whole biblical rationale for the postmillennial hope, from its incipient beginning in Genesis to its glorious conclusion in Revelation. Your faith will be re-invigorated as you begin to recognize that the gospel is the power of God unto salvation (Rom 1:16) and that our Lord Jesus really meant it when he commanded us to go and make disciples of all the nations (Matt 28:19).

Language, Culture and Identity Torben Vestergaard,1999 Are people's identities an effect of their membership of linguistic, national regional and ethnic groups, and does such group membership create problems for inter-cultural communication? These questions are addressed in this collection of nine papers from the Third Annual Conference of the Nordic Network for Intercultural Communications. Answers are drawn from general, theoretical, pedagogical and empirical points of view. They agree on one fundamental issue: the language-identity-cutlure complex, dynamic and overlapping rather than static and isomorphic. This leads the contributions to touch upon the political implications of a relational and dynamic view on language, culture, human rights and regional identities in a Europe with crumbling national boundaries. Among the topics are whether a person's identity is bound to a certain place and whether it is constant. Others discuss cross-cultural communication, a post-structuralist stance, different values ascribed to words and actions; the ability of people to interact with different cultures; the cross-cultural language link in language teaching; what language choice says about people and their attitudes towards each other when more than one language is available; and a recognition that most of us are members of several cultural groups, which can create incompatible values and attitudes.

Problem-Solving Methods Dieter Fensel,2003-05-15 Researchers in Artificial Intelligence have traditionally been classified into two categories: the "neaties" and the "scruffies". According to the scruffies, the neaties concentrate on building elegant formal frameworks, whose properties are beautifully expressed by means of definitions, lemmas, and theorems, but which are of little or no use when tackling real-world problems. The scruffies are described (by the neaties) as those researchers who build superficially impressive systems that may perform extremely well on one particular case study, but whose properties and underlying theories are hidden in their implementation, if they exist at all. As a life-long, non-card-carrying scruffy, I was naturally a bit suspicious when I first started collaborating with Dieter Fensel, whose work bears all the formal hallmarks of a true neaty. Even more alarming, his primary research goal was to provide sound, formal foundations to the area of knowledge-based systems, a traditional stronghold of the scruffies - one of whom had famously declared it "an art", thus attempting to place it outside the range of the neaties (and to a large extent succeeding in doing so).

Pedagogy of the Heart Paulo Freire,2021-05-20 Pedagogy of the Heart represents some of the last writings by Paulo Freire. In this work, perhaps more so than any other, Freire presents a coherent set of principles for education and politics. For those who have read Freire's other works the book includes new discussions of familiar subjects including community, neoliberalism, faith, hope, the oppressed, and exile. For those coming to Freire for the first time, the book will open up new ways of looking at the interrelations of education and political struggle. Freire reveals himself as a radical reformer whose lifelong commitment to the vulnerable, the illiterate and the marginalised has had a profound impact on society and education today. The text includes substantive notes by Ana Maria Araújo Freire, a foreword by Martin Carnoy, a preface by Ladislau Dowbor, as well as a substantive new introduction by Antonia Darder, who holds the Leavey Presidential Endowed Chair in Ethics and Moral Leadership in the School of Education at Loyola Marymount University, USA. Translated by Donaldo Macedo and Alexandre Oliveira.

Pedagogy of Indignation Paulo Freire,2015-11-17 This is the first English translation of the last book written by Paulo Freire. Pedagogy of Indignation delves ever deeper into the themes that concerned him throughout his life. The book begins with a series of three deeply moving reflective pedagogical letters to the reader about the role of education for one's development of self. He also speaks directly to the reader about the relationship to risk in one's life and he delves deeper than before into the daily life tensions between freedom and authority. Building on these interconnected themes, Freire sharpens our sense of the critical faculties of children and how a teacher may work with children to help them realize their potential intellectually and as human beings. Subsequent chapters explore these topics in relation to the wider social world: the social constitution of the self in the work of educators; critical citizenship; and the necessity of teaching from a position about the world that goes beyond literacy programs to include the legacy of colonialism in peoples' resistance movements today. The book's poignant interludes, written by Ana Maria Araujo Freire, reveal Paulo's thoughts about the content of this book as he was completing it during the last weeks and days of his life.
