Bloodline of the Gods

Nick Redfern, 2015-08-17 Are significant numbers of humanity the product of an ancient and advanced alien civilization? Have we, across the millennia, been periodically modified and refined as a species? In short, has our genetic make-up been manipulated by otherworldly beings that view human civilization as one big lab experiment? These are

controversial and thought-provoking questions. They are also questions that demand answers, answers that may very well be found by examining those people whose blood type is Rh negative. The vast majority of humankind—85 to 90 percent—is Rh positive, which means a person's red blood cells contain an antigen directly connected to the Rhesus monkey. This antigen is known as the Rh factor. Each and every primate on the planet has this antigen, except for one: the remaining 10 to 15 percent of humans. If the theory of evolution is valid—that each and every one of us is descended from ancient primates—shouldn't we all be Rh positive? Yes, we should. But we're not. The Negatives are unlike the rest of us. They are different. They are the unique individuals whose bloodline may have nothing less than extraterrestrial origins.

Constructing Marxist Ethics ,2015-02-04 Constructing Marxist Ethics offers a series of compelling essays that reassess the role of ethics and moral values in Marxist theory and philosophy.

Neuroscience of Cognitive Development Charles A. Nelson,Kathleen M. Thomas,Michelle de Haan,2012-06-26 A new understanding of cognitive development from the perspective of neuroscience This book provides a state-of-the-art understanding of the neural bases of cognitive development. Although the field of developmental cognitive neuroscience is still in its infancy, the authors effectively demonstrate that our understanding of cognitive development is and will be vastly improved as the mechanisms underlying development are elucidated. The authors begin by establishing the value of considering neuroscience in order to understand child development and then provide an overview of brain development. They include a critical discussion of experience-dependent changes in the brain. The authors explore whether the mechanisms underlying developmental plasticity differ from those underlying adult plasticity, and more fundamentally, what distinguishes plasticity from development.

Having armed the reader with key neuroscience basics, the book begins its examination of the neural bases of cognitive development by examining the methods employed by professionals in developmental cognitive neuroscience. Following a brief historical overview, the authors discuss behavioral, anatomic, metabolic, and electrophysiological methods. Finally, the book explores specific content areas, focusing on those areas where there is a significant body of knowledge on the neural underpinnings of cognitive development, including: * Declarative and non-declarative memory and learning * Spatial cognition * Object recognition * Social cognition * Speech and language development * Attention development For cognitive and developmental psychologists, as well as students in developmental psychology, neuroscience, and cognitive development, the authors' view of behavioral development from the perspective of neuroscience sheds new light on the mechanisms that underlie how the brain functions and how a child learns and behaves.

Nanostructured Solar Cells Narottam Das, 2017-02-22

Nanostructured solar cells are very important in renewable energy sector as well as in environmental aspects, because it is environment friendly. The nano-grating structures (such as triangular or conical shaped) have a gradual change in refractive index which acts as a multilayer antireflective coating that is leading to reduced light reflection losses over broadband ranges of wavelength and angle of incidence. There are different types of losses in solar cells that always reduce the conversion efficiency, but the light reflection loss is the most important factor that decreases the conversion efficiency of solar cells significantly. The antireflective coating is an optical coating which is applied to the surface of lenses or any optical devices to reduce the light reflection losses. This coating assists for the light trapping capturing capacity or improves the efficiency of optical devices, such as lenses or solar cells. Hence, the multilayer antireflective

coatings can reduce the light reflection losses and increases the conversion efficiency of nanostructured solar cells.

International Environmental Law and Asian Values Roda Mushkat, 2004 Following decades of vigorous economic expansion, Asia is confronting the environmental consequences of unfettered development. This poses a challenge because of the strong bias of prevailing cultural systems in the region toward the goal of lifting standards of living over achieving ecological sustainability. This book juxtaposes international environmental norms and practices with relevant Asian policies and their applications in key areas. Roda Mushkat examines the fundamental principle of public participation in environmental law-making, as well as the rights approach, against the emergence of democratic and human rights norms in the region. The complex relationship between trade and the environment is also discussed in light of the strong regional emphasis on economic growth, trade liberalization, and the aversion to conditionalities. Given regionalization processes in Asia-Pacific and elsewhere, this work seeks to establish to what extent such processes have led to the regionalization of international environmental law. International Environmental Law and Asian Values concludes that, although some gaps can be identified between international imperatives and regional responses, Asian values have not proved to be an insurmountable barrier to the spread of international environmental legal ideas. On the whole, the region is responding to impulses emanating from the global arena rather than resisting them consciously. The analysis and conclusions of this comprehensive and original work will be of considerable interest to scholars of international law and relations, environmental policy, comparative culture, economic development, and social change.

Nanostructured Surfaces and Thin Films Synthesis by Physical Vapor Deposition Rafael Alvarez, 2021-04-22 This Special Issue deals with the synthesis of nanostructured surfaces

and thin films by means of physical vapor deposition techniques such as pulsed laser deposition, magnetron sputtering, HiPIMS, or e-beam evaporation, among others. The nanostructuring of the surface modifies the way a material interacts with the environment, changing its optical, mechanical, electrical, tribological, or chemical properties. This can be applied in the development of photovoltaic cells, tribological coatings, optofluidic sensors, or biotechnology to name a few. This issue includes research presenting novel or improved applications of nanostructured thin films, such as photovoltaic solar cells, thin-film transistors, antibacterial coatings or chemical and biological sensors, while also studying the nanostructuring mechanisms, from a fundamental point of view, that produce rods, columns, helixes or hexagonal grids at the nanoscale.

Controlled Release in Oral Drug Delivery Clive G. Wilson, Patrick J. Crowley, 2011-09-22 Controlled Release in Oral Drug Delivery provides focus on specific topics, complementing other books in the initial CRS series. Each chapter sets the context for the inventions described and describe the latitude that the inventions allow. In order to provide some similar look to each chapter, the coverage includes the historical overview, candidate drugs, factors influencing design and development, formulation and manufacturing and delivery system design. This volume was written along three main sections: the relevant anatomy and physiology, a discussion on candidates for oral drug delivery and the major three groups of controlled release systems: diffusion control (swelling and inert matrices); environmental control (pH sensitive coatings, time control, enzymatic control, pressure

control) and finally lipidic systems.

China's Use of Armed Coercion James A. Siebens, 2023-11-17
This book analyzes when, how, why, and to what effect China has used its armed forces in recent decades to coerce other actors in the international system. Over the past 20 years, China's international status as a "great power" has become undeniable. China's "peaceful rise" has included substantial investments in military modernization and an increasingly assertive regional posture. While China has not waged war since 1979, it has frequently resorted to what the U.S. State Department has referred to as "gangster tactics" – threats, intimidation, and armed confrontation – to advance its strategic aims. This volume illuminates the ways in which China has employed its military and paramilitary tools to coerce other states, and examines the motivations and specific foreign policy objectives that China has pursued using force short of war. The study presents new analysis of an original dataset on coercive actions undertaken by China's armed forces, taking into account the political objectives pursued and the environmental contexts in which these operations occurred. It also presents a series of expert case studies addressing the most consequential examples of China using force to coerce in recent decades. The volume contributes to a more historically informed, empirically based understanding of great power competition. This book will be of much interest to students of Chinese security and foreign policy, strategic studies, Asian politics and International Relations.

Risk, Global Governance and Security Yee-Kuang

Heng, Ken McDonagh, 2009-03-26 This book applies risk society theory to the 'War on Terror', steering the discussion away from the militaristic discourse of the Bush era towards an emphasis on global cooperation and a new cosmopolitan agenda. The literature and rhetoric of the 'War on Terror' has been dominated by dramatic high-profile military campaigns and division in the international community. This overlooks the various multilateral practices and cooperative processes that are emerging to combat global terrorism. President Bush himself had initially been at pains to stress that his 'war' on terror would be like no other; it would involve not just military tools but financial, intelligence, police and diplomatic measures too. More than eight years later, the time is right for an in-depth evaluation of this 'other' war on terror. Yet these relatively mundane regulatory dimensions have received much less attention than the 'hot' wars in Afghanistan and Iraq, where ongoing difficulties suggest that military force alone is inadequate in controlling globalised terrorism. This book aims to redress this imbalance, by foregrounding these initiatives, tracing their implementation and reflecting on the implications for International Relations. Adopting an analytical approach that seeks to incorporate theories of risk, global governance and security, this book aims to explore the overlapping multi-level and multi-lateral dynamics of the emerging global security architecture which have remained neglected and unmapped thus far in the war on terror. This book will be of interest to students of risk politics, security studies, global governance and IR in general. Yee-Kuang Heng is Lecturer in International Relations, University of St Andrews, UK. Kenneth McDonagh is Lecturer in International Relations in the School of Law and Government, Dublin City University.
