Lawrence James Metcalf

Systematics, Evolution, and Biogeography of Compositae Vicki Ann Funk, 2009 This spectacular book does full justice to the Compositae (Asteraceae), the largest and most successful flowering plant family with some 1700 genera and 24,000 species. It is an indispensable reference, providing the most up-to-date hypotheses of phylogenetic relationships in the family based on molecular and morphological characters, along with the corresponding subfamilial and tribal classification. The 2009 work not only integrates the extensive molecular phylogenetic analyses conducted in the last 25 years, but also uses these to produce a metatree for about 900 taxa of Compositae. The book contains 44 chapters, contributed by 80 authors, covering the history, economic importance, character variation, and systematic and phylogenetic diversity of the family. The emphasis of this work is phylogenetic; its chapters provide a detailed, current, and thoroughly documented presentation of the major (and not so major) clades in the family, citing some 2632 references. Like the Compositae, the book is massive, diverse, and fascinating. It is beautifully illustrated, with 170 figures, and an additional 108 cladograms (all consistently color-coded, based on the geographic range of the included taxa); within these figures are displayed 443 color photographs, clearly demonstrating the amazing array of floral and vegetative form expressed by members of the clade. --NHBS Environment Bookstore.

Alpine Plants of New Zealand Lawrence James Metcalf, 1996 Part of the Mobil Nature Series, this reference offers detailed text and coloured photographs of plants to be found in New Zealand's alpine regions.

Trends in Antarctic Terrestrial and Limnetic Ecosystems D.M. Bergstrom, P. Convey, A.H.L. Huiskes, 2006 The Antarctic provides a suite of scenarios useful for investigating the range of climate change effects on terrestrial and limnetic biota. The purpose of the book is to provide, based on the most up to date knowledge, a synthesis of the likely effects of climate change on Antarctic terrestrial and limnetic ecosystems and, thereby, to contribute to their management and conservation, based on the information.

Plant Geography of Chile Andres Moreira-Munoz, 2011-01-19 The first and so far only Plant Geography of Chile was written about 100 years ago, since when many things have changed: plants have been renamed and reclassified; taxonomy and systematics have experienced deep changes as have biology, geography, and biogeography. The time is therefore ripe for a new look at Chile's plants and their distribution. Focusing on three key issues – botany/systematics, geography and biogeographical analysis – this book presents a thoroughly updated synthesis both of Chilean plant geography and of the different approaches to studying it. Because of its range – from the neotropics to the temperate sub-Antarctic – Chile's flora provides a critical insight into evolutionary patterns, particularly in relation to the distribution along the latitudinal profiles and the global geographical relationships of the country's genera. The consequences of these relations for the evolution of the Chilean Flora are discussed. This book will provide a valuable resource for both graduate students and researchers in botany, plant taxonomy and systematics, biogeography, evolutionary biology and plant conservation.

Ecosystem Services in Agricultural and Urban Landscapes Stephen Wratten, Harpinder Sandhu, Ross Cullen, Robert Costanza, 2013-01-14 Ecosystem services are the resources and processes supplied by natural ecosystems which benefit humankind (for example, pollination of crops by insects, or water filtration by wetlands). They underpin life on earth, provide major inputs to many economic sectors and support our lifestyles. Agricultural and urban areas are by far the largest users of ecosystems and their services and (for the first time) this book explores the role that ecosystem services play in these managed environments. The book also explores methods of evaluating ecosystem services, and discusses how these services can be maintained and enhanced in our farmlands and cities. This book will be useful to students and researchers from a variety of fields, including applied ecology, environmental economics, agriculture and forestry, and also to local and regional planners and policy makers.

How to Put Nature Into Our Neighbourhoods Maria Ignatieva, Colin Meurk, Marjorie Van Roon, Robyn Simcock, Glenn Stewart, 2008 Low Impact Urban Design and Development (LIUDD) is a sustainable living concept. Urban sustainability and health are achieved through effective management of stormwater, waste, energy, transport and ecosystem services. The greening of cities by planting ecologically with local species is also a vital part of the overall well-being of ecosystems and citizens. Biodiversity or nature heritage contributes to enduring sense of place or identity - a key element of nationhood. This manual is for the town dweller, developer, landscape designer and planner - and provides practical applications from nearly a decade of LIUDD research across New Zealand. It summarises and links to information regarding the physical and built environment, but its focal point is nature heritage and overcoming attrition and critical loss.

New Zealand Journal of Botany, 2004-03

The Prince Edward Islands Steven Chown, Pierre William Froneman, 2008-06-01 This book provides a modern, synthetic overview of what is known about the structure, functioning and interactions of marine and terrestrial systems at the Prince Edward Islands. Building on more than 50 years of biological, geological, meteorological, and oceanographic research, it demonstrates not only how inextricably linked marine and terrestrial systems at the islands are, but also how global environmental challenges, such as climate change, biological invasions, and over exploitation, are playing out at the regional and local levels in the Southern Ocean.

Flowering Plants. Eudicots Joachim W. Kadereit, Charles Jeffrey, 2007-07-12 This volume contains a complete systematic treatment of the flowering plant order Asterales. This comprises 12 families with approx. 1,720 genera and about 26,300 species. Identification keys are provided for all genera, and likely phylogenetic relationships are discussed extensively. The wealth of information contained in this volume makes it an indispensable source for all working in the fields of pure and applied plant sciences.
