*Weaving Services and People on the World Wide Web* Irwin King,Ricardo Baeza-Yates,2009-06-23 Ever since its inception, the Web has changed the landscape of human experiences on how we interact with one another and data through service infrastructures via various computing devices. This interweaving environment is now becoming ever

more embedded into devices and systems that integrate seamlessly on how we live, both in our working or leisure time. For this volume, King and Baeza-Yates selected some pioneering and cutting-edge research work that is pointing to the future of the Web. Based on the Workshop Track of the 17th International World Wide Web Conference (WWW2008) in Beijing, they selected the top contributions and asked the authors to resubmit their work with a minimum of one third of additional material from their original workshop manuscripts to be considered for this volume. After a second-round of reviews and selection, 16 contributions were finally accepted. The work within this volume represents the tip of an iceberg of the many exciting advancements on the WWW. It covers topics like semantic web services, location-based and mobile applications, personalized and context-dependent user interfaces, social networks, and folksonomies. The presentations aim at researchers in academia and industry by showcasing latest research findings. Overall they deliver an excellent picture of the current state-of-the-art, and will also serve as the basis for ongoing research discussions and point to new directions.

**An Injury Law Constitution** Marshall S. Shapo, 2012-03-26 Author Marshall S. Shapo presents the argument that the body of law Americans have developed concerning responsibility for injuries and prevention of injuries has some of the qualities of a constitution--a fundamental set of principles that govern relations among people and between people and corporate and governmental institutions. This 'injury law constitution' includes tort law, legislative compensation systems like workers compensation, and the many statutes that regulate the safety of risky activities and of products ranging from drugs and medical devices to automobiles and cigarettes. An Injury Law Constitution presents a novel thesis that embraces leading features of the American law of injuries. Professor Shapo's analysis, into which he weaves the history of these varied systems of law, links them to the unique compensation plan devised for the victims of the September 11th attacks on the World Trade Center. Professor Shapo examines how our injury law reflects deeply held views in American society on risk and injury, indicating how the injury law constitution serves as a guide to the question of what it means to be an American. Refusing to accept easy academic formulas, An Injury Law Constitution captures the reality of how people respond to injury risks in functional contexts involving diverse activities and products.

*Rapture for the Geeks* Richard Dooling, 2008-10-07 Will the Geeks inherit the earth? If computers become twice as fast and twice as capable every two years, how long is it before they're as intelligent as humans? More intelligent? And then in two more years, twice as intelligent? How long before you won't be able to tell if you are texting a person or an especially ingenious chatterbot program designed to simulate intelligent human conversation? According to Richard Dooling in *Rapture for the Geeks*—maybe not that long. It took humans millions of years to develop opposable thumbs (which we now use to build computers), but computers go from megabytes to gigabytes in five years; from the invention of the PC to the Internet in less than fifteen. At the accelerating rate of technological development, AI should surpass IQ in the next seven to thirty-seven years (depending on who you ask). We are sluggish biological sorcerers, but we've managed to create whiz-bang machines that are evolving much faster than we are. In this fascinating, entertaining, and illuminating book, Dooling looks at what some of the greatest minds have to say about our role in a future in which technology rapidly leaves us in the dust. As Dooling writes, comparing human evolution to technological evolution is "worse than apples and oranges: It's appliances versus orangutans." Is the era of Singularity, when machines outthink humans, almost upon us? Will we be enslaved by our supercomputer overlords, as many a sci-fi writer has wondered? Or will humans live lives of

leisure with computers doing all the heavy lifting? With antic wit, fearless prescience, and common sense, Dooling provocatively examines nothing less than what it means to be human in what he playfully calls the age of b.s. (before Singularity)—and what life will be like when we are no longer alone with Mother Nature at Darwin's card table. Are computers thinking and feeling if they can mimic human speech and emotions? Does processing capability equal consciousness? What happens to our quaint beliefs about God when we're all worshipping technology? What if the human compulsion to create ever more capable machines ultimately leads to our own extinction? Will human ingenuity and faith ultimately prevail over our technological obsessions? Dooling hopes so, and his cautionary glimpses into the future are the best medicine to restore our humanity.
