Flight MH17, Ukraine and the new Cold War Kees van der Pijl,2018-07-24 On 17 July 2014 Malaysian Airlines Flight MH17 was shot down amid conflict in Ukraine, a crisis that led to a NATO-Russia standoff and the onset of a new period of East-West confrontation. This is the first scholarly work on the Ukrainian unrest and the tragic downing of MH17. It offers an analysis that challenges the Western consensus surrounding these events, emphasising the geopolitical and economic context of the West's standoff with Russia, the BRICS bloc, and the struggles over the EU's energy supply. Based on previously unpublished government and NATO documents as well as a wide array of sources this book offers an analysis of global political economy and contemporary debates about Russia and East-West relations.

Cyber Resilience Sergei Petrenko,2022-09-01 Modern cyber systems acquire more emergent system properties, as far as their complexity increases: cyber resilience, controllability, self-organization, proactive cyber security and adaptability. Each of the listed properties is the subject of the cybernetics research and each subsequent feature makes sense only if there is a previous one. Cyber resilience is the most important feature of any cyber system, especially during the transition to the sixth technological stage and related Industry 4.0 technologies: Artificial Intelligence (AI), Cloud and foggy computing, 5G +, IoT/IIoT, Big Data and ETL, Q-computing, Blockchain, VR/AR, etc. We should even consider the cyber resilience as a primary one, because the mentioned systems cannot exist without it. Indeed, without the sustainable formation made of the interconnected components of the critical information infrastructure, it does not make sense to discuss the existence of 4.0 Industry cyber-systems. In case when the cyber security of these systems is mainly focused on the assessment of the incidents' probability and prevention of possible security threats, the cyber resilience is mainly aimed at preserving the targeted behavior and cyber systems' performance under the conditions of known (about 45 %) as well as unknown (the remaining 55 %) cyber attacks. This monograph shows that modern Industry 4.0. Cyber systems do not have the required cyber resilience for targeted performance under heterogeneous mass intruder cyber-attacks. The main reasons include a high cyber system structural and functional complexity, a potential danger of existing vulnerabilities and "sleep" hardware and software tabs, as well as an inadequate efficiency of modern models, methods, and tools to ensure cyber security, reliability, response and recovery.

Crime Science and Digital Forensics Anthony C. Ijeh, Kevin Curran, 2021-09-15 This volume is a collation of articles on counter forensics practices and digital investigative methods from the perspective of crime science. The book also shares alternative dialogue on information security techniques used to protect data from unauthorised access and manipulation. Scandals such as those at OPCW and Gatwick Airport have reinforced the importance of crime science and the need to take proactive measures rather than a wait and see approach currently used by many organisations. This book proposes a new approach in dealing with cybercrime and unsociable behavior involving remote technologies using a combination of evidence-based disciplines in order to enhance cybersecurity and authorised controls. It starts by providing a rationale for combining selected disciplines to enhance cybersecurity by discussing relevant theories and highlighting the features that strengthen privacy when mixed. The essence of a holistic model is brought about by the challenge facing digital forensic professionals within environments where tested investigative practices are unable to provide satisfactory evidence and security. This book will be of interest to students, digital forensic and cyber security practitioners and policy

makers. It marks a new route in the study of combined disciplines to tackle cybercrime using digital investigations and crime science.

Common Sense Mathematics: Second Edition Ethan D. Bolker, Maura B. Mast, 2021-01-21 Ten years from now, what do you want or expect your students to remember from your course? We realized that in ten years what matters will be how students approach a problem using the tools they carry with them—common sense and common knowledge—not the particular mathematics we chose for the curriculum. Using our text, students work regularly with real data in moderately complex everyday contexts, using mathematics as a tool and common sense as a guide. The focus is on problems suggested by the news of the day and topics that matter to students, like inflation, credit card debt, and loans. We use search engines, calculators, and spreadsheet programs as tools to reduce drudgery, explore patterns, and get information. Technology is an integral part of today's world—this text helps students use it thoughtfully and wisely. This second edition contains revised chapters and additional sections, updated examples and exercises, and complete rewrites of critical material based on feedback from students and teachers who have used this text. Our focus remains the same: to help students to think carefully—and critically—about numerical information in everyday contexts.

Cyber-Development, Cyber-Democracy and Cyber-Defense Elias G. Carayannis, David F. J. Campbell, Marios Panagiotis Efthymiopoulos, 2014-08-14 In this volume, contributors from academia, industry, and policy explore the inter-connections among economic development, socio-political democracy and defense and security in the context of a profound transformation, spurred by globalization and supported by the rapid development of information and communication technologies (ICT). This powerful combination of forces is changing the way we live and redefining the way companies conduct business and national governments pursue strategies of innovation, economic growth and diplomacy. Integrating theoretical frameworks, empirical research and case studies, the editors and contributors have organized the chapters into three major sections, focusing on cyber-development, cyber-democracy and cyber-defense. The authors define cyber-development as a set of tools, methodologies and practices that leverage ICT to catalyze and accelerate social, political and economic development, with an emphasis on making the transition to knowledge-based economies. One underlying understanding here is that knowledge, knowledge creation, knowledge production and knowledge application (innovation) behave as crucial drivers for enhancing democracy, society, and the economy. By promoting dissemination and sharing of knowledge, cyber-democracy allows a knowledge conversion of the local into the global (gloCal) and vice versa, resulting in a gloCal platform for communication and knowledge interaction and knowledge enhancement. Meanwhile, technology-

enabled interconnectivity increases the need to adopt new methods and actions for protection against existing threats and possible challenges to emerge in the future. The final section contemplates themes of cyber-defense and security, as well as emerging theories and values, legal aspects and trans-continental links (NATO, international organizations and bilateral relations between states). Collectively, the authors present a unique collection of insights and perspectives on the challenges and opportunities inspired by connectivity.

Best Of Times, The Worst Of Times, The: Maritime Security In The Asia-Pacific Joshua Ho, Catherine Zara Raymond, 2005-08-08 This authoritative book brings together in a single volume international experts renowned in their specializations to discuss issues and current trends relating to maritime security. It looks at the issue of maritime security in the Asia-Pacific through a three step approach. Firstly, it surveys both the global maritime outlook and the outlook in each of the regions of Northeast Asia, Southeast Asia, and South Asia. From these regional perspectives, trends in commercial shipping and force modernization, and issues like the weapons proliferation and maritime terrorism are discussed. After looking at the maritime environment, the specific challenges that the maritime community faces are examined. These challenges include maritime boundary and territorial disputes in the South China Sea, the force modernization of three Northeast Asian navies, and the spectre of maritime terrorism. The volume concludes by looking at some new initiatives for maritime cooperation, a survey of maritime "regime" building, and the legal and political implications of the proliferation security initiative.

Vulnerable Mission: Jim Harries, 2011-06-28 In this compendium, Jim articulates the impact of the nature and shape of the interface between the West and Africa, and how that interface works or does not work. Read on if you are interested in Africa, mission, development, globalisation, communication, linguistics, theology, dependency, or power dynamics in intercultural perspective. The conclusions reached in the fourteen articles in this compendium endorse Jim's deepening conviction that some Western missionaries and development workers ought to engage in their ministries in Africa and the majority world using indigenous languages and locally available resources. To this end, Jim and some of his missionary colleagues formed the Alliance for Vulnerable Mission in 2007.

The US Defense Economy Jomana Amara, Raymond E. Franck, 2022-01-27 The United States defence economy is remarkable for a number of reasons - including sheer size. It receives a significant (albeit decreasing) share of GDP and has a significant international footprint. Its purpose is to provide the resources for national defence - against a set of complex and capable adversaries. The main players in the defence economy are households, and the Federal Government. The associated interactions determine the resources provided for national defence and their allocation among various defence needs. This Element focuses primarily on interactions between government and industrial suppliers within the institutional peculiarities of the defence marketplace. This includes the developments that have determined the course of defence industry consolidation post-Cold War. The authors also highlight the persistent gap between resources available for defence and the means to execute the National Security Strategy. Finally, they offer some tentative thoughts regarding developments likely to shape the defence economy's future.

A Handbook of Military Conscription and Composition the World Over Rita J. Simon, Mohamed Alaa Abdel-Moneim, 2011-10-16 This book focuses on military conscription in 22 countries that represent the world's regions. The purpose is to shed light on the history, politics, and main events that led to the choice of conscription or professional military forces in the countries under study. While we acknowledge that practical and technological developments played major roles in this choice, we also understand that racial and gender relations, social group and political regime dynamics, regional influences, and international forces also affected military composition and relations to the rest of the society. Through this review, we aim at providing an easy-to-access source of knowledge about military mobilization policies and historical developments as well as the main ideas, politics, and events that shaped them. Through this review, we offer a glimpse on developments that influenced societies and political systems and were reflected in their militaries.

Managing Defence in a Democracy Laura R. Cleary, Teri McConville, 2006-09-27 Although each state is unique it is possible to

identify certain common problems and issues with respect to defence governance and management. Governance and Management of Defence is a unique introduction to all the key principles of governance and management through the clear identification of these commonalities. The leading contributors that this volume brings together also show that if individuals are keen to reform practices within their defence establishments they need to be aware of the many constraints and obstacles that may challenge their endeavours. Each contributor is an acknowledged expert in their field and identifies examples of good practice from across the world and the steps taken to implement that practice. This new volume work supports teaching with accessible prompts for reflective activity. The editors recognize that many readers will not be native English speakers, so plain English is used throughout with international examples and case studies to make all the topics and themes clearly relevant and understandable. This is the ideal introductory text for any course that deals with management within the defence sector. This book will be of great interest to all students of armed forces and defence management, politics and strategic and military studies.
