William Henry Wilkins

Gender, Violence and Security Laura Shepherd, 2013-07-04 How do understandings of the relationships between gender, violence, security and the international inform policy and practice in which these notions are central? What are the practical implications of basing policy on problematic discourses? In this highly original poststructural feminist critique, the author maps the discursive terrains of institutions, both NGOs and the UN, which formulate and implement resolutions and guides of practice that affect gender issues in the context of international policy practices. The author investigates UN Security Council Resolution 1325, passed in 2000 to address gender issues in conflict areas, in order to examine the discursive construction of security policy that takes gender seriously. In doing so, she argues that language is not merely descriptive of social/political reality but rather constitutive of it. Moving from concept to discourse, and in turn to practice, the author analyses the ways in which the resolution's discursive construction had an enormous influence over the practicalities of its implementation, and how the resulting tensions and inconsistencies in its construction contributed to its failures. The book argues for a re-conceptualisation of gendered violence in conjunction with security, in order to avoid partial and highly problematic understandings of their practical relationship. Drawing together theoretical work on discourses of gender violence and international security, sexualised violence in war, gender and peace processes, and the domestic-international dichotomy with her own rigorous empirical investigation, the author develops a compelling discourse-theoretical analysis that promises to have far-reaching impact in both academic and policy environments.

Submarine Mass Movements and Their Consequences Jacques Locat, Jürgen Mienert, 2012-12-06 Did you know that the Grand Bank earthquake of 1929 triggered a huge submarine mass movement

which broke submarine cables over a distance of up to 1000 km from its source and generated a tsunami which devastated a small village in Newfoundland killing 27 people? The same happened in Papua New Guinea in 1998 with more than 2000 casualties. Submarine mass movements of various sizes and styles are shaping the sea floor and are of concern for many facets of human activities both onshore and offshore. These include the development of natural resources, energy and communication transport, coastal infrastructures and communities. This book provides a world-wide perspective of submarine mass movements and their consequences. This has been made possible by assembling excellent contributions from active researchers, groups, or institutions, thus providing full coverage of the many scientific and engineering aspects of this type of marine and coastal geo-hazard. It covers fundamental as well as site specific studies from many areas including the Atlantic and Pacific oceans, inner seas like the Mediterranean Sea, and fjords using the most recent technologies from multibeam sonar imaging techniques, 3D seismic analysis, slope stability analysis, to debris flow and tsunami modeling. Audience: This book is of interest to any researcher in the field of marine and coastal geo-hazards. It will be useful for planners, scientists and engineers involved in the development of offshore and near-shore resources and also to those in charge of the management and mitigation of coastal hazards. For graduate students, this book provides an up-to-date vision of the process of submarine mass movements and their consequences from both a scientific and an engineering standpoint, and it includes a unique collection of the existing literature on marine geo-hazards. CD-Rom included This volume contains a CD-Rom which in addition to an electronically searchable version of the contributions, has full colour versions of figures which are printed in black and white in the book.
