Agriculturally Important Fungi for Sustainable Agriculture Ajar Nath Yadav, Shashank Mishra, Divjot Kour, Neelam Yadav, Anil Kumar, 2020-06-25 Microbes are ubiquitous in nature. Among microbes, fungal communities play an important role in agriculture, the environment, and medicine. Vast fungal diversity has been associated with plant systems, namely epiphytic fungi, endophytic fungi, and rhizospheric fungi. These fungi associated with plant systems play an important role in plant growth, crop yield, and soil health. Rhizospheric fungi, present in rhizospheric zones, get their nutrients from root exudates released by plant root systems, which help with their growth, development, and microbe activity. Endophytic fungi typically enter plant hosts through naturally occurring wounds that are the result of plant growth, through root hairs, or at epidermal conjunctions. Phyllospheric fungi may survive or proliferate on leaves depending on material influences in leaf diffuseness or exudates. The diverse nature of these fungal communities is a key component of soil-plant systems, where they are engaged in a network of interactions endophytically, phyllospherically, as well as in the rhizosphere, and thus have emerged as a promising tool for sustainable agriculture. These fungal communities promote plant growth directly and indirectly by using plant growth promoting (PGP) attributes. These PGP fungi can be used as biofertilizers and biocontrol agents in place of chemical fertilizers and pesticides for a more eco-friendly method of promoting sustainable agriculture and environments. This first volume of a two-volume set covers the biodiversity of plant-associated fungal communities and their role in plant growth promotion, the mitigation of abiotic stress, and soil fertility for sustainable agriculture. This book should be useful to those working in the biological sciences, especially for microbiologists, microbial biotechnologists, biochemists, and researchers and scientists of fungal biotechnology.

Conservation Biology for All Navjot S. Sodhi, Paul R. Ehrlich, 2010-01-08 Conservation Biology for All provides cutting-edge but basic conservation science to a global readership. A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting-edge conservation knowledge as widely as possible. Important topics such as balancing conservation and human needs, climate change, conservation planning, designing and analyzing conservation research, ecosystem services, endangered species management, extinctions, fire, habitat loss, and invasive species are covered. Numerous textboxes describing additional relevant material or case studies are also included. The global biodiversity crisis is now unstoppable; what can be saved in the developing world will require an educated constituency in both the developing and developed world. Habitat loss is particularly acute in developing countries, which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found. Sadly, developing world conservation scientists have found it difficult to access an authoritative textbook, which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest. There is now an urgent need to educate the next generation of scientists in developing countries, so that they are in a better position to protect their natural resources.

Risks of Labour John Wilson Crawford, 1985 The aim of this series is to provide a common ground between obstetricians and paediatricians, and to describe current practice in a way that is useful and relevant to both groups.

Incorporating environmental flows into “water stress” indicator 6.4.2 Food and Agriculture Organization of the United Nations, 2019-01-29 These guidelines are intended to assist countries to participate in the assessment of SDG 6.4.2 on water stress by contributing data and information on environmental flows (EF). These data are necessary for calculation of the SDG 6.4.2 indicator on water stress, for which countries are required to submit information to FAO who is custodian of this SDG indicator. The guidelines provide a minimum standard method, principally based on the Global Environmental Flows Information System (GEFIS), which is accessible via <http://eflows.iwmi.org>, and is the approach that will be used to generate the country EF data that will make up the global 6.4.2 report. Countries that have more comprehensive and accurate EF data will be able to make use of that data when checking the global dataset produced by FAO and also to add additional details to their Voluntary National report on SDG 6.4.2.

Translation and Conflict Mona Baker, 2018-10-25 Translation and Conflict was the first book to demonstrate that translators and interpreters participate in circulating as well as resisting the narratives that create the intellectual and moral environment for violent conflict and social tensions. Drawing on narrative theory and with numerous examples from historical and current contexts of conflict, Mona Baker provides an original and coherent model of analysis that pays equal attention to the circulation of narratives in translation and to questions of dominance and resistance. With a new preface by Sue-Ann Harding, Translation and Conflict is more than ever the essential text for any student or researcher interested in the study of translation and social movements.

He and Edie, a glint who can see the past, may have succeeded in their quest to find the Stoneheart, but their journey is far from over. Edie and the Gunner, a statue of a World War I soldier, have been captured by the Walker, and it's up to George to save them. But first he must deal with the three strange veins, made of marble, bronze and stone, that have begun to grow out of his hand and curl around his wrist. Legend has it that unless he successfully completes three challenges, the veins will continue up his forearm, and eventually pierce through his heart. As George struggles to find the strength within to face the choice he has made, to take the Hard Way, he is determined to use his power for good—even as others wish to harness it for its great potential for evil. /DIVDIV

Text and Technology Mona Baker, Gill Francis, Elena Tognini-Bonelli, 1993-06-01 Text and Technology focuses on three major areas of modern linguistics: discourse analysis, corpus-driven analysis of language, and computational linguistics. The volume starts off with a description of the various British traditions in text analysis by Michael Stubbs. The first section "Spoken and Written Discourse" contains contributions by Martin Warren, Mohd Dahan Hazadiah., Amy B.M. Tsui, Anna Mauranen and Susan Hunston. The next section on corpus-driven analysis "Corpus Studies: Theory and Practice" contains contributions by Gill Francis, Bill Louw, Allan Partington, Elena Tognini-Bonelli. The contributions in this section by Kirsten Malmkjær and Mona Baker deal specifically with translated text. The final third section "Text and Technology: Computational Tools" has contributions by David Coniam, Jeremy Clear, Junsaku Nakamura, Geoff Barnbrook and Margaret Allen. In spite of the specialised nature of the topics discussed and the level of sophistication with which these topics are handled, the papers are written in a clear and accessible style and will therefore be of interest to seasoned scholars and students alike. An extensive index further enhances the value of this collection as a reference point for many of the issues that currently lie at the heart of modern linguistics enquiry.
