**Stone Conservation: Principles and Practice** Alison Henry, 2015-12-08 Winner of the RIBA Book Award, this important and timely publication brings together contributions from leading stone conservation practitioners. It discusses the philosophical principles on which stone conservation is founded and the need to understand the full history and development of a building before starting work. Other topics covered in this book include consolidation, cleaning, and the replacement of stone; conservation of different stone types, including limestone, sandstone, and marble; problems of dealing with polychrome stone; and finally, issues relating to church monuments and graveyards, taking account of the need for good maintenance and health and safety requirements. The book is illustrated with the authors' own examples of stone conservation in practice. Architects, surveyors and craftsmen involved in the conservation of stone structures will find this both a practical and useful reference work.

**Elemental Narratives** Enrico Cesaretti, 2020-09-29 Over the past century, the Italian landscape has undergone exceedingly rapid transformations, shifting from a mostly rural environment to a decidedly modern world. This changing landscape is endowed with a narrative agency that transforms how we understand our surroundings. Situated at the juncture of Italian studies and ecocriticism and following the recent "material turn" in the environmental humanities, *Elemental Narratives* outlines an original cultural and environmental map of the *bel paese*. Giving equal weight to readings of fiction, nonfiction, works of visual art, and physical sites, Enrico Cesaretti investigates the interconnected stories emerging from both human creativity and the expressive eloquence of "glocal" materials, such as sulfur, petroleum, marble, steel, and asbestos, that have helped make and, simultaneously, "un-make" today's Italy, affecting its socio-environmental health in multiple ways. Embracing the idea of a decentralized agency that is shared among human and nonhuman entities, Cesaretti suggests that engaging with these entangled discursive and material texts is a sound and revealing ecocritical practice that promises to generate new knowledge and more participatory, affective responses to environmental issues, both in Italy and elsewhere. Ultimately, he argues that complementing quantitative, data-based information with insights from fiction and nonfiction, the arts, and other humanistic disciplines is both desirable and crucial if we want to modify

perceptions and attitudes, increase our awareness and understanding, and, in turn, develop more sustainable worldviews in the era of the Anthropocene. Elegantly written and convincingly argued, this book will appeal broadly to scholars and students working in the fields of environmental studies, comparative literatures, ecocriticism, environmental history, and Italian studies.

**Principles of Forensic Engineering Applied to Industrial Accidents** Luca Fiorentini,Luca Marmo,2019-01-29 An introductory text on the investigation of industrial accidents Forensic engineering should be seen as a rigorous approach to the discovery of root causes that lead to an accident or near-miss. The approach should be suitable to identify both the immediate causes as well as the underlying factors that affected, amplified, or modified the events in terms of consequences, evolution, dynamics, etc., as well as the contribution of an eventual human error. This book is a concise and introductory volume to the forensic engineering discipline which helps the reader to recognize the link among those important, very specialized aspects of the same problem in the global strategy of learning from accidents (or near-misses). The reader will benefit from a single point of access to this very large, technical literature that can be only correctly understood with the right terms, definitions, and links in mind. Keywords: Presents simple (real) cases, as well as giving an overview of more complex ones, each of them investigated within the same framework; Gives the readers the bibliography to access more in-depth specific aspects; Offers an overview of the most commonly used methodologies and techniques to investigate accidents, including the evidence that should be collected to define the cause, dynamics and responsibilities of an industrial accident, as well as the most appropriate methods to collect and preserve the evidence through an appropriate chain of security. Principles of Forensic Engineering Applied to Industrial Accidents is essential reading for researchers and practitioners in forensic engineering, as well as graduate students in forensic engineering departments and other professionals.

*Michelangelo's Vatican Pietà and its Afterlives* Lisa M.

Rafanelli,2022-12-30 This book offers a fresh perspective on Michelangelo's well-known masterpiece, the Vatican Pietà, by tracing the shifting meaning of the work of art over time. Lisa M. Rafanelli chronicles the object history of the Vatican Pietà and the active role played by its many reproductions. The sculpture has been on continuous view for over 500 years, during which time its cultural, theological, and artistic significance has shifted. Equally important is the fact that over its long life it has been relocated numerous times and has also been reproduced in images and objects produced both during Michelangelo's lifetime and long after, described here as artistic progeny: large-scale, unique sculpted variants, smaller-scale statuettes, plaster and bronze casts, and engraved prints. The book will be of interest to scholars

working in art history, Renaissance studies, early modern studies, religion, Christianity, and theology.

*Criminal Justice in International Society* Willem de Lint, Marinella Marmo, Nerida Chazal, 2014-01-03 This book adopts a critical criminological approach to analyze the production, representation and role of crime in the emerging international order. It analyzes the role of power and its influence on the dynamics of criminalization at an international level, facilitating an examination of the geopolitics of international criminal justice. Such an approach to crime is well-developed in domestic criminology; however, this critical approach is yet to be used to explore the relationship between power, crime and justice in an international setting. This book brings together contrasting opinions on how courts, prosecutors, judges, NGOs, and other bodies act to reflexively produce the social reality of international justice. In doing this, it bridges the gaps between the fields of sociology, criminology, international relations, political science, and international law to explore the problems and prospects of international criminal justice and illustrate the role of crime and criminalization in a complex, evolving, and contested international society.

Maintainability Of Facilities: For Building Professionals Chew Yit Lin Michael, 2010-01-08 This book focuses on spearheading the integration of maintainability, starting right from the design stage. To enable such integration, improving the knowledge of maintainability and setting maintainability benchmarks are two key issues. These objectives are fulfilled with the development of a comprehensive defect library, a material manual and a maintainability scoring system. These tools serve to define acceptable standards in design and construction practices, thus enhancing long-term maintainability of facilities. *Maintainability of Facilities: For Building Professionals* aims to improve the standard and quality of design, construction and maintenance practices to produce efficient facilities that require minimum maintenance. The text covers technical issues related to maintainability of major components of a facility, and discusses the implications and selection of materials for high maintainability. The target readers are practitioners and students in architecture, engineering, building, real estate, construction, project management, facilities management, quantity and building surveying.

**Radical Evolution** Joel Garreau, 2006-05-09 Taking us behind the scenes with today's foremost researchers and pioneers, bestselling author Joel Garreau

shows that we are at a turning point in history. At this moment we are engineering the next stage of human evolution. Through advances in genetic, robotic, information, and nanotechnologies, we are altering our minds, our memories, our metabolisms, our personalities, our progeny—and perhaps our very souls. Radical Evolution reveals that the powers of our comic-book superheroes already exist, or are in development in hospitals, labs, and research facilities around the country—from the revved-up reflexes and speed of Spider-Man and Superman, to the enhanced mental acuity and memory capabilities of an advanced species. Over the next fifteen years, Garreau makes clear in this New York Times Book Club premiere selection, these enhancements will become part of our everyday lives. Where will they lead us? To heaven—where technology's promise to make us smarter, vanquish illness, and extend our lives is the answer to our prayers? Or, as some argue, to hell—where unrestrained technology brings about the ultimate destruction of our species?

*Trinacria, 'An Island Outside Time'* Christopher Prescott, Arja Karivieri, Peter Campbell, Kristian Göransson, Sebastiano Tusa, 2021-05-31  
Trinacria, the ancient name for Sicily extending back to Homeric Greek, has understandably been the focus of decades of archaeological research. Recognizing Sicily's rich prehistory and pivotal role in the history of the Mediterranean, Sebastiano Tusa - professor, head of heritage agencies and councillor for Cultural Heritage for the Sicilian Region - promoted the exploration of the island's heritage through international collaboration. His decades of fostering research initiatives not only produced rich archaeological results spanning the Palaeolithic to the modern era but brought scholars from a range of schools and disciplines to work together in Sicily. Through his efforts, uniquely productive methodological, theoretical and interpretative networks were created. Their impact extends far beyond Sicily and Italy. To highlight these networks and their results, the Institutum Romanum Finlandiae, the Swedish Institute in Rome, the Norwegian Institute in Rome, the British School at Rome and the Assessorato dei Beni Culturali of Sicily, with generous support from the Swedish Riksbankens Jubileumsfond, assembled this anthology of papers. The aim is to present a selection of the work of and results from contemporary, multi-national research projects in Sicily. The collaboration between the Sicilian and international partners, often in an interdisciplinary framework, has generated important results and perspectives. The articles in this volume present research projects from throughout the island. The core of the articles is concerned with the Archaic through to the Roman period, but diachronic studies also trace lines back to the Stone Age and up to the contemporary era. A range of methods and sources are explored, thus creating an up-to-date volume that is a referential gateway to contemporary Sicilian archaeology.
