Recorders Rafael Lozano-Hemmer, 2010 Catalogue of an exhibition held at the Manchester Art Gallery, Sept. 18 2010 - Jan. 30, 2011.

**A Touch of Code** Robert Klanten, Sven Ehmann, Verena Hanschke, Lukas Feireiss, 2011 Today's designers are creating compelling atmospheres and interactive experiences by merging hardware and software with architecture and design. This book is a collection of this innovative work produced where virtual realms meet the real world and where dataflow confronts the human senses. It presents an international spectrum of interdisciplinary projects at the intersection of laboratory, trade show, and urban space that play with the new frontiers of perception, interaction, and staging created by current technology. The work reveals how technology is fundamentally changing and expanding strategies for the targeted use of architecture, art, communication, and design for the future.

**Responsive Environments** Lucy Bullivant, 2006-09 The latest title in the V&A Contemporary series looks at groundbreaking interior design, art, and architecture. Responsive environments—spaces that interact with people who use or pass through them—have become ubiquitous lately. Lucy Bullivant provides an intriguing look at these cutting-edge spaces, from an installation in a shopping center that registers passers-by with patterns of colored light and sound, to an interactive artwork in the boardroom of a British TV network. With insights drawn from the author's interviews with many of the designers featured, *Responsive Environments* will appeal to designers, students, and creative professionals, as well as anyone interested in interior design, architecture, and technology.

**Humanity Without Dignity** Andrea Sangiovanni, 2017-06-26 Why are all persons due equal respect? Andrea Sangiovanni rejects the view that human dignity is grounded in our capacities for reason, love, etc. Rather than focus on the basis for equality,

we should focus on inequality: Why and when is it wrong to treat others as inferior? Moral equality, he writes, is best explained by a rejection of cruelty.

*Art in the Age of Anxiety* Omar Kholeif, 2021-01-26 Artists and writers examine the bombardment of information, misinformation, emotion, deception, and secrecy in online and offline life in the post-digital age. Every day we are bombarded by information, misinformation, emotion, deception, and secrecy in our online and offline lives. How does the never-ending flow of data affect our powers of perception and decision making? This richly illustrated and boldly designed collection of essays and artworks investigates visual culture in the post-digital age. The essays, by such leading cultural thinkers as Douglas Coupland and W. J. T. Mitchell, consider topics that range from the future of money to the role of art in a post-COVID-19 world; from mental health in the digital age to online grieving; and from the mediation of visual culture to the thickening of the digital sphere. Accompanying an ambitious exhibition conceived by the Sharjah Art Foundation and volume editor and curator Omar Kholeif, the book is a work of art and a labor of love, emulating the labyrinthine corridors of the exhibition itself. Created by a group of writers, artists, designers, photographers, and publishers, *Art in the Age of Anxiety* calls upon us to consider what our collective future will be and how humanity will adapt to it.

**Artists Reclaim the Commons** Glenn Harper, Twylene Moyer, 2013 Percent-for-art commissions may represent the official, professionalized face of public art, but beyond the plaza--in neighborhoods, back streets, vacant lots, suburban hinterlands, rural villages, and remote virtual realms--another kind of art has been taking shape, one that questions the very nature and experience of the commons. Driven by artists, curators, and nonprofit organizations, these independent projects treat public space as more than an outdoor gallery. Whether temporary or permanent, guerrilla or sanctioned, object or action, such works

invite us to imagine alternative ways of seeing and being while opening up new possibilities for individual and collective consciousness. When we enter its domain, public space becomes a site of resistance, a stage on which to enact experimental scenarios, and a catalyst for action--a place of both art and life. Twylene Moyer and Glenn Harper are the editors of four previous volumes in the Perspectives on Contemporary Sculpture series.

*The PC Bible* Eric Knorr, 1995 With 43,000 copies in print, this lively primer and reference covers the universe of PC hardware and software with a concise hardware buyers' guide, software surveys, and loads of useful tips on everything from plugging in a mouse to building a better worksheet. Thoroughly updated, this blockbuster volume is indispensable for anyone who wants to know what to buy, how to find it and how to use it.

**Conspiracy Dwellings** Outi Remes, Pam Skelton, 2010 'Conspiracy Dwellings' brings together nine illustrated essays of theorists and art practitioners about artworks made in the midst of conflict or from the position of commentary in topics that span from the 70s to the present day. These essays also consider artworks that address conflict and resistance as a lived experience.

Digital Power Electronics and Applications Fang Lin Luo, Hong Ye, Muhammad H. Rashid, 2010-07-20 The purpose of this book is to describe the theory of Digital Power Electronics and its applications. The authors apply digital control theory to power electronics in a manner thoroughly different from the traditional, analog control scheme. In order to apply digital control theory to power electronics, the authors define a number of new parameters, including the energy factor, pumping energy, stored energy, time constant, and damping time constant. These parameters differ from traditional parameters such as the power factor, power transfer efficiency, ripple factor, and total harmonic distortion. These new parameters result in the definition of new mathematical modeling: • A zero-order-hold (ZOH) is used to

simulate all AC/DC rectifiers. • A first-order-hold (FOH) is used to simulate all DC/AC inverters. • A second-order-hold (SOH) is used to simulate all DC/DC converters. • A first-order-hold (FOH) is used to simulate all AC/AC (AC/DC/AC) converters. Presents most up-to-date methods of analysis and control algorithms for developing power electronic converters and power switching circuits Provides an invaluable reference for engineers designing power converters, commercial power supplies, control systems for motor drives, active filters, etc. Presents methods of analysis not available in other books

**Power System Dynamics** K. R. Padiyar, 2004 The book is divided into five parts with a total of 14 chapters. The first part begins by introducing the basic concepts of stability. The second part develops the system model in detail. Part three presents the small signal stability analysis applied to the problem of low frequency oscillations. Part four presents the SSR phenomenon and part five deals with the transient stability problem. The basic concepts of voltage stability and methods of analysis are discussed in Appendix A.

**Digital Control in Power Electronics** Simone Buso, Paolo Mattavelli, 2007-12-31 This book presents the reader, whether an electrical engineering student in power electronics or a design engineer, some typical power converter control problems and their basic digital solutions, based on the most widespread digital control techniques. The presentation is focused on different applications of the same power converter topology, the half-bridge voltage source inverter, considered both in its single- and three-phase implementation. This is chosen as the case study because, besides being simple and well known, it allows the discussion of a significant spectrum of the more frequently encountered digital control applications in power electronics, from digital pulse width modulation (DPWM) and space vector modulation (SVM), to inverter output current and voltage control. The book aims to serve two purposes: to give a basic, introductory knowledge of the

digital control techniques applied to power converters, and to raise the interest for discrete time control theory, stimulating new developments in its application to switching power converters.

*Power System Control and Stability* Paul M. Anderson, A. A. Fouad, 1982

**Encyclopedia of Associations** Verne Thompson, 2013-04-12

*Microsystem Design* Stephen D. Senturia, 2007-05-08 It is a real pleasure to write the Foreword for this book, both because I have known and respected its author for many years and because I expect this book's publication will mark an important milestone in the continuing worldwide development of microsystems. By bringing together all aspects of microsystem design, it can be expected to facilitate the training of not only a new generation of engineers, but perhaps a whole new type of engineer – one capable of addressing the complex range of problems involved in reducing entire systems to the micro- and nano-domains. This book breaks down disciplinary barriers to set the stage for systems we do not even dream of today. Microsystems have a long history, dating back to the earliest days of mic- electronics. While integrated circuits developed in the early 1960s, a number of laboratories worked to use the same technology base to form integrated sensors. The idea was to reduce cost and perhaps put the sensors and circuits together on the same chip. By the late-60s, integrated MOS-photodiode arrays had been developed for visible imaging, and silicon etching was being used to create thin diaphragms that could convert pressure into an electrical signal. By 1970, selective anisotropic etching was being used for diaphragm formation, retaining a thick silicon rim to absorb package-induced stresses. Impurity- and electrochemically-based etch-stops soon emerged, and bulk micromachining came into its own.

**Electrical Machines and Drive Systems** Alexandru Fransua, Răzvan Măgureanu, 1984

**Electronic Superhighway** Omar Kholeif, 2016 Accompanying

a landmark exhibition at the Whitechapel Gallery, this catalogue explores the impact of computer and networked technologies on artists from the mid-1960s to the present day.
